To: Farnam, Julie E
Subject: Re: USCIS Immigration Services Officer Position

Dear Julie Farnam,

Is there any news regarding the vacancy? Is it still available? Have there been any decisions in terms of the candidates?

All the best,
[REDACTED]

Norm and Michael,

Region 9 has done a great job on putting information together pertaining to possibilities for the 50,000 sq. ft requirement. You will see Corman and 300 N La has space (move in ready). Maybe we can accommodate in phases . They put time lines and costs together for retrofits, however those can change once we get full requirements from CIS..

Check out the map they attached as well.

Description

Last Updated: 06/21/2014 By: RHingorani

The James C. Corman Federal Building is a Class B stand-alone building located in the heart of the Van Nuys Civic Center. The Internal Revenue Service (IRS) is the anchor tenant with other building occupancies including the Defense Contract Audit Agency (DCAA) and the U.S. Corps of Engineers (COE). The 1974 main office building consists of reinforced concrete construction with exterior precast concrete /stone cladding, and is not considered historic. It is a four-story building with one below-grade basement/garage. The USPS is housed in an existing one-story structure adjacent to the office building. The facility is in close proximity to the Van Nuys City Hall, the Northwest District Superior Court, the Van Nuys State Office Building, the Van Nuys Branch Library, the Marvin Braude Constituent Service Center, and a Los Angeles Police Department Office. The building is primarily utilized as general federal office space. The building is named after James C. Corman, former City of Los Angeles City Councilman, who served 10 terms as a U.S. Congressman

Performance Measures And Financial Status

Last Updated: 07/10/2014 By: RHingorani

This building is a Tier 3 asset as a result of poor financial performance due to the high vacancy rate of 69%. A building disposal study has been requested to determine the viability of retaining this asset due to it's high vacancy rates and need for investment.

Tenant Satisfaction was 85.12% when last surveyed in 2010 which is largely due to the small amount of investment that has been allotted for this building in recent years.

It is projected that the asset will close FY2013 at (\$997,679). The forecast for FY2014 projects FFO to be (\$1,490,000). The forecast for FY2014 projects FFO to be (\$1,637,918). FFO projections for FY16 are not finalized yet since Revenue Estimates are still being reviewed, though expenses are expected to have normal inflationary increases from the projected FY15 level.

ROE: For FY14 is -5.3%. All buildings and leases will be surveyed for FY14.

Tenants

Last Updated: 06/21/2014 **By:** RHingorani

The major tenants in the multi-tenant facility are IRS, COE, and DCAA. The Corps of Engineers has moved into approximately 10,700 rsf of vacant space on the third floor, as well as the basement of the building in March 2009.

Operations

Last Updated: 07/29/2014 **By:** RHingorani

The building condition is in need of some repairs such as seismic upgrades, restroom upgrades and roofing repairs, which will be covered in the prospectus. Many of the building systems, such as elevators, chillers and boilers, were upgraded in recent years. There is occasional water infiltration on the top floor which appears to be a result of moisture penetration of the penthouse wall during heavy storms. Projects in progress at the building include a roof repair and sprinklerhead replacement as part of the Fire Life Upgrade (via BA54).

Market Discussion

Last Updated: 06/26/2014 **By:** RHingorani

In the first quarter of 2014, the San Fernando Valley office market recorded negative net absorption of negative 389,400 square feet. The total vacancy rate increased from 17.4% in the fourth quarter of 2013 to 17.5% in the first quarter of 2014, an increase of 10 basis points. Weighted average asking rental rates increased \$0.02 to \$2.36 in the first quarter of 2014, up from \$2.34 per square foot Full Service Gross in the previous quarter. Leasing activity was 4.7 million square feet in the first quarter 2014, which was a similar level to previous quarter.

Over the past 12 months, the San Fernando Valley market has gained 86,100 jobs, for an increase of 2.1%. The gain in employment helped lower the unemployment rate to 8.7%, compared to 10.2% a year ago. In the first quarter 2014, the Los Angeles office market was relatively flat, experiencing 82,200 square feet of net absorption, while the vacancy rate remained at 18.1%. Weighted average asking rental rates remained at \$2.52 per square foot Full Service Gross. Market fundamentals continue to provide tenants with the ability to obtain concessions such as free rent and tenant improvement allowances from landlords.

The San Fernando Valley and Ventura County office market saw total vacancy decrease to 16.7%, the fourth consecutive quarter of decreasing vacancy. Net absorption in Q1 2014 was 25,400 square feet, a relatively flat performance. Direct weighted average asking rents remained at \$2.16 per square foot Full Service Gross for the tenth straight quarter, as landlords continue their strategy to attract and retain tenants. New leasing activity in Q1 2014 was 558,200 square feet compared to 622,700 square feet in Q4 2013. Net absorption was 25,400 square feet in Q1 2014, the lowest amount of positive absorption in the past four quarters. Large tenants have expanded or signed leases to expand in 2014.

Market Indicators:

Vacancy - 17.5% [Up from previous Q]
Net Absorption - (-389,400 SF) [Up from previous Q]
Construction - 3,258,200 SF [Up from previous Q]
Rental Rate - \$2.36 P SF [Up from previous Q]
Unemployment DOWN to 8.3%

Office Overview for the San Fernando Valley market:

426 office buildings
34,002,900 total inventory SF
16.9% total vacancy
Average Rental Rate is \$2.16 P SF

Strategy & Action Plans

Holding Period: 6-15 mid term

Inventory Segmentation: Transition

Long Term Strategy

Last Updated: 07/29/2014 **By:** RHingorani

The building condition is in need of some repairs such as seismic upgrades, restroom upgrades and roofing repairs, which will be covered in the prospectus. Many of the building systems, such as elevators, chillers and boilers, were upgraded in recent years. There is occasional water infiltration on the top floor which appears to be a result of moisture penetration of the penthouse wall during heavy storms. Projects in progress at the building include a roof repair and sprinklerhead replacement as part of the Fire Life Upgrade (via BA54).

The James C. Corman federal building is in good condition. A Community Housing plan includes retaining this federal building and actively pursuing surrounding leased locations within the delineated area to bring the leased tenants into the federal space.

Since the building has very little income, the payback would be very long at this point (or infinitely long since the building is in the red). However, the building is being actively marketed and GSA is confident in the increase of the occupancy level. Which, in turn, will result in an increase in the amount of revenue received.

Tracy, please see the note below on the Corman Building in CA. I wanted to make sure that you about this possibility as well. Also, I understand that the GSA/CIS reviewed the Appraisal Store building in Baltimore as well, and I wanted to get your feedback on that. I asked my folks to see if you had a few minutes to connect later today on these and other properties.

Norm

Norm,

As discussed, attached is the Asset Business Plan for the Corman Federal Building, which is located in Van Nuys, CA.

After taking a second look, this building was not on the most recent list we shared with CIS, but I'm not sure why. In my discussions with R9, I do not believe there are tenants currently slated to backfill the ~65k USF of vacancy. I am not sure if all the vacant space is contiguous, but if CIS is potentially interested in this location, we can dig deeper into the details.

We'll have more info on the Fallon Building in Baltimore forthcoming this afternoon.

Thanks,
Andrew

GSA is sending the OA over to me either today or tomorrow. They did mention once again, that the lease expires in 2016 and so far they have not received any information from Norm Dong on extending it.

Hi Gina,

The regions came back with some additional vetting of spaces on the list of vacant space that was sent over to Rendell Jones by Norm Dong. The places you want to see are still on this list (GSA Regions 2 & 9 took off spaces)

I think when you talk to the NCR folks, you will find that they have been working with another agency to backfill the Crystal City space, but I see it is still on the list so it isn't committed yet, and you will be talking to them to set up the tour and can get the full story of what is

Executive Summary

Whitman, Requardt and Associates (WRA) was tasked by the General Services Administration (GSA) to provide a study to analyze the use of the existing Metro West Facility as temporary office space based on current local codes and life safety considerations. The study will be utilized as a reference as the Government determines the suitability of the Metro West Facility for use as an office space for 1,500 employees for 5 to 10 years. The office space is proposed to be located in the South Building of the Metro West Facility and will be operated by GSA. The Metro West Facility is located at 300 North Greene Street in Baltimore, Maryland.

The current facility was used as an office space until it was vacated in February 2013. The facility consists of a North Building with a fourteen story tower and a South Building. The two buildings are connected through the basement level and the 3rd and 4th floors and total 1,352,000 square feet of space. In addition to the office space, there was a day care facility located on the first level of the South Building, a cafeteria with full kitchen located at the third floor link between the North and South Buildings and two levels of parking and support facilities below the first level. The proposed usage of the South Building will not result in a change of occupancy. This report will identify significant code, functional, and system performance issues that need to be addressed prior to use by a new occupant allowing GSA to evaluate the costs and feasibility of upgrading the building.

Due to the immediate need for this office space, the government's goal is to get a code compliant space with acceptable system performance within a 90-120 day timeframe. WRA has identified code related issues and other work required to achieve an occupiable space. It is our recommendation to bring the space to full compliance prior to occupancy however, the government is the authority having jurisdiction (AHJ) and will make the final decision on the items that will need to be updated for the initial occupancy or implemented over the next few years.

Two scenarios were evaluated to provide space for the 1,500 proposed office occupants. Scenario 1 is to replicate the furniture layout of the previous occupants. This requires occupancy of the entire South Building, but will result in less renovation of the existing building infrastructure. Scenario 2 is to increase the utilization factor of the building footprint by maximizing the number of workstations per floor and minimizing the circulation while remaining consistent with current GSA standards. This approach requires more renovation of existing electrical and HVAC systems, but over a smaller footprint.

A summary of the code analysis and suggested upgrades is listed below. The IBC 2012 and the NFPA 101 Life Safety codes were the primary codes used to evaluate building code compliance.

Scenario 1: Reuse previous furniture layout:

Architectural

- A-1: Replace carpet, VCT, and transition strips throughout.
- A-2: Repair, refinish, or replace wall surfaces.
- A-3: Replace existing ceiling tiles with new.
- A-4: Resolve dead end corridors / egress issues at the second floor of Core 12.
- A-5: Confirm operability and code compliance of all hardware on egress path doors.
- A-6: Bring toilet rooms into compliance with ADA.
- A-7: Resolve need for elevator as an accessible means of egress.
- A-8: Provide photo-luminescent markings in stairs.

Life Safety

- LS-1: Investigate the wall assemblies and atrium glass storefront for the Emergency Command Center (ECC) room. Provide the necessary fire-rated construction upgrades where needed.

Fire Protection

- FP-1: Replace sprinkler system with new independent system not connected to the chilled water system
- FP-2: Modify existing sprinkler head layout for coverage after new interior partitions are built.
- FP-3: Extend sprinkler system to all areas not currently sprinklered.
- FP-4: Replace existing sprinkler heads with quick response sprinklers.
- FP-5: Verify the fire protection systems are being inspected and tested in accordance with NFPA 25.
- FP-6: Modify the fire pump system to provide 100 psi at the top standpipe hose valves to comply with NFPA 14.
- FP-7: Provide portable fire extinguishers throughout the proposed occupancy in accordance with NFPA 10.

Fire Alarm

- FA-1: Provide a new Digital Alarm Communicator Transmitter (DACT).
- FA-2: Modify existing audible and visual notification to comply with new partition layout.
- FA-3: Verify the fire alarm systems are being inspected and tested in accordance with NFPA 72.
- FA-4: Replace all fire alarm notification cover plates that are marked "FIRE" with new cover plates that are marked "ALERT" and update digital voice content to address mass notification messaging.
- FA-5: Test Child-Care Center fire alarm system for interface with Simplex system and provide system interconnection if none exists.

Mechanical

- M-1: Restart district steam service to support domestic hot water generation and building heating
- M-2: Repair chiller serving outside air desiccant system. Test and energize refrigerant leak detection system.
- M-3: Provide combination fire/smoke dampers and associated detectors for the exhaust and outside air risers where they penetrate the shafts to the occupied floors.
- M-4: Provide supplemental dry-cooler systems to serve new IT closets.
- M-5: Modify HVAC system to accommodate new rated egress corridor.
- M-6: Operate mechanical ventilation system in occupied mode for several days to flush out building, test automatic controls system, and make minor repairs as required. In addition, perform IAQ testing to document building air quality falls within an acceptable range.
- M-7: Reprogram automatic controls to de-energize equipment serving unoccupied areas where feasible.
- M-8: Set 131 degree Fahrenheit hot water distribution temperature to each toilet room group and add thermostatic mixing valves at each toilet room group to limit discharge temperature to 110 degrees Fahrenheit. Isolate North Building domestic water system from South Building system to limit stagnant water.
- M-9: Provide bottled water stations to supplement drinking fountains.
- M-10: De-activate existing direct injection steam humidifiers.

Electrical

- E-1: Relocate the existing emergency lights and provide additional emergency lights to provide average illumination of 1 FC (footcandle) along the paths of egress.
- E-2: Provide new exit lights (green LED) to mark the paths of egress
- E-3: Relocate and/or provide additional lights for the conference rooms. Provide local lighting control devices and receptacles in the conference rooms.
- E-4: Provide furniture whips from the existing underfloor ducts to the workstations.
- E-5: Provide additional power poles for the workstations receptacles and telecomm pathways as necessary.
- E-6: Revise the existing lighting control zones.

Scenario 2: Increase Occupant Density with an optimized furniture layout of 8 X 8 workstations.

- All Scenario 1 recommendations.

The cost for each recommendation is included in the analysis matrix.

Introduction

Whitman, Requardt and Associates (WRA) has been requested to perform a study to determine the suitability of the South Building of the Metro West Facility as office space for 1,500 federal employees. This will document and evaluate the South Building of the facility based on current local codes, life safety regulations and any repairs, rehabilitation or replacement required to provide suitable office space for federal employees.

There has been one recent study completed for this building which is:

- Fire Protection and Safety Management Survey of the Social Security Administration Metro West Building – March 26, 2013

The design criteria and recommendations from this report have been utilized for this study and considered in the analysis to maintain consistency. Additionally, the life safety and fire suppression planning recommendations made in this report are coordinated and rely on some of the findings in that study. Due to the number of people requiring office space, the South Building was proposed to be occupied while the North Building remains unoccupied.

The occupancy of the Metro West Facility office space is proposed in a timeframe of 90-120 days. This time will be used to correct code deficiencies, life safety concerns, and any repair or rehabilitation needed to provide an occupiable space with suitable HVAC, electrical, and plumbing infrastructure. If the code deficiencies are not corrected and existing systems not refurbished or replaced in the most cost effective manner consistent prior to period of occupancy, the GSA Regional Fire Protection Engineer will serve as the Authority Having Jurisdiction. The AHJ will determine the minimum life safety requirements for occupancy of this building.

Existing Building

The Metro West Facility is located at 300 North Greene Street in Baltimore, Maryland and was constructed in 1980. The facility consists of two buildings, a North Building and a South Building that are connected with a link on the third and fourth floors. The North Building includes a fourteen story tower with approximately 22,000 square feet per floor. The South Building is a five story building with approximately 110,000 square feet per floor. The link houses a cafeteria, seating area and connecting corridors between the two buildings.

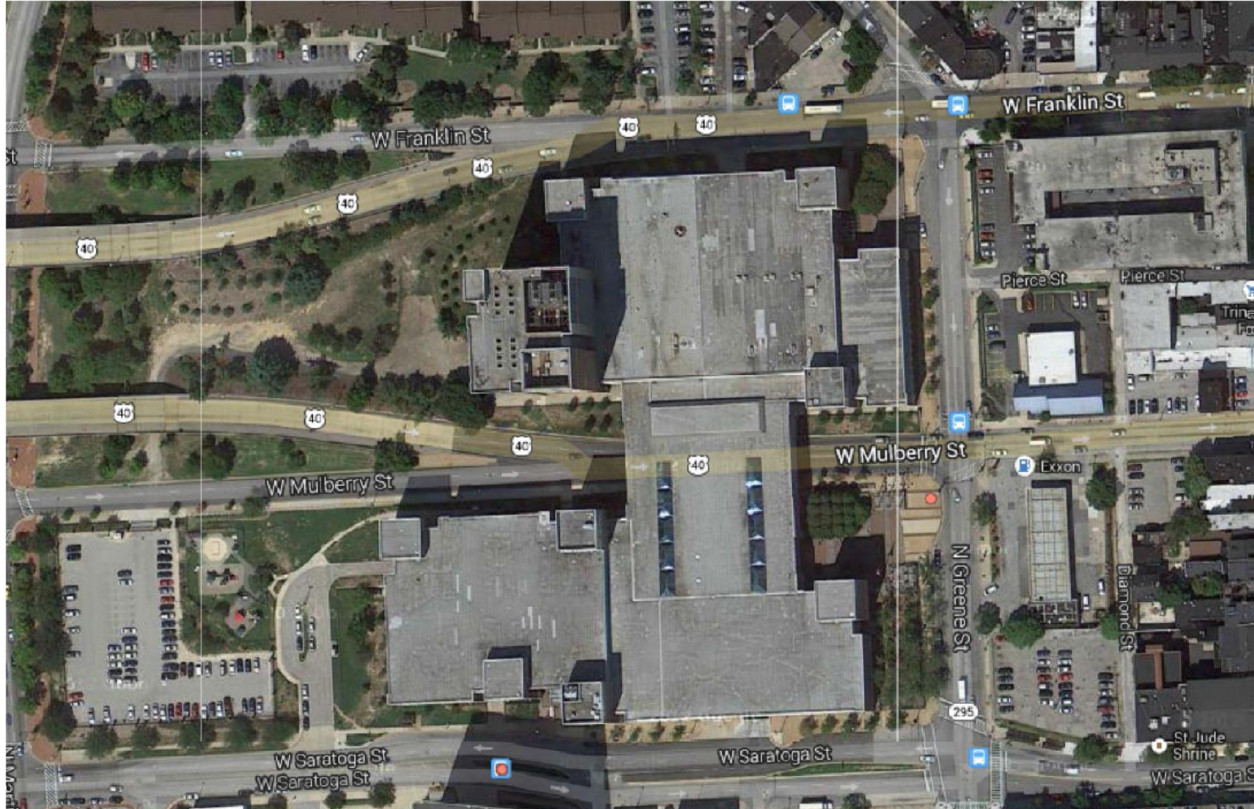

Figure 1: Aerial View of Metro West Facility – Courtesy: Google Earth

Combined the facility is approximately 1,352,000 square feet in area and consists primarily of office space with cafeteria, warehouse space, storage rooms, equipment rooms and loading dock. The building is divided into thirteen cores which incorporate bathrooms, HVAC duct shafts, elevators, escalators, equipment rooms, etc. Figure 2 identifies the core locations in the facility.

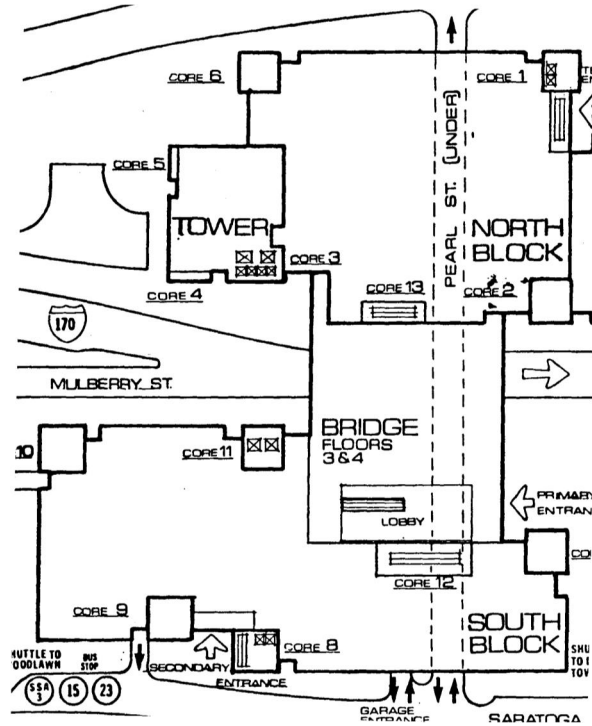

Figure 2: Metro West Core Locations

Architectural

General

Whitman, Requardt and Associates (WRA) visited the building for a brief visual survey of the existing conditions. The architectural survey was primarily focused on the overall condition of the interior space, the availability and condition of means of egress, and the minimum repairs necessary for immediate business occupancy. In addition, WRA reviewed the existing floor plans provided by GSA in order to calculate the areas of each space proposed to be utilized as well as to determine the size and capacity of the means of egress.

It should be noted that given the limited time available, it was not possible to review the drawings prior to the walkthrough, so the dimensions provided on the drawings are assumed to be accurate but have not been verified on site. It should also be noted that the walkthrough with GSA was limited to visual observation of the south building and cafeteria/kitchen area only.

Existing Conditions

Having recently been vacated, the building is still in fairly good condition. The building is steel framed with concrete and metal deck floors. The interiors primarily consist of suspended ceilings, gypsum board partitions (assumed to be over cold formed metal studs), and a combination of carpet tile and vinyl composition tile (VCT) flooring. Each floor is typically an open plan with circulation and services in a number of "cores" located around the perimeter of each floor. These cores typically contain egress stairs, toilet rooms, janitor's closets, mechanical shafts, and other building services such as electrical, telecom, or data closets. In the South Building there are two cores that also contain passenger elevators and escalators.

The walls are in fair condition and seem to consist of gypsum wall panels at higher traffic areas they are faced with a plastic laminate wall covering. The plastic laminate is in need of cleaning and has some edges that are chipped, delaminating and missing in some areas. The existing 5-foot by 5-foot acoustic panel ceilings grid appear to be in fair condition but the fabric facing on the majority of the panels is dirty and in some areas the panels have been replaced with faced fiberglass batt insulation. These replacement areas are sagging and in some cases are falling out of the ceiling grid. This 5-foot by 5-foot ceiling system is not a common ceiling system in current construction and may prove challenging to find replacement components. Floor finishes consists of carpet tile which is in poor condition and VCT with evidence of numerous repairs. There are a number of areas where carpet tiles are either missing or have edges that are curling up causing trip hazards. There are also areas of VCT that appear to have been coffee stations, and while no damaged tiles were noted in the areas visited, there are carpet-to-tile transition strips missing in areas. Under the finished flooring there appears to be a concrete topping slab over the structural slab and electrical duct system.

On the floors 2 thru 5 of the south building, interior gypsum partitions are generally limited to the cores and some perimeter rooms. At the second floor a large area on the west end of the floor is partitioned with walls that do not extend fully to the ceiling. It is assumed that partitions at the cores extend from the floor to the underside of the deck above. Any fire ratings of these existing partitions are not known at this time and should be verified to the extent possible. Interior partitions located away from the cores such as those used for copy / file rooms or private offices may or may not be constructed to the

deck above. If only constructed to the ceiling, these partitions might not meet code requirements for lateral load resistance. If they remain, there are code compliance issues with them including potential dead end corridors and doors that swing against the direction of egress travel that would need to be addressed. There are several large suites of rooms in the building that are not anticipated to be utilized at this time including an infirmary on the second floor and the daycare center and fitness center on the first floor. Egress paths and existing conditions were not reviewed in these areas. Should they be utilized, analysis of these areas needs to be done. There do not appear to be any issues with the fitness center on the first floor.

The cores include toilet rooms that appear to be in good condition with continued inspection while the building is unoccupied. The available plans indicate each toilet room has an ADA compliant toilet stall, though it should be noted that there has been no opportunity to survey all toilet rooms for the required ADA clearances, either with regard to ingress and egress clearances or to fixture locations and mounting heights. Access was not available to the toilet rooms on each floor but the one that was able to be observed during the survey indicates that the ADA components are slightly out of compliance and modification may be needed. Showers are provided only in the fitness center on the first floor, including one accessible shower each for men and women. Here as well, ADA required clearances in the shower rooms have not been checked.

Fire stairs are provided in each of the five cores on the perimeter of the South Building. Each fire stair has a vestibule leading into it to prevent passage of smoke into the stairwell. Not all stairs are the same width and so have varying capacity. See the attached diagrams for the South Building for capacities of each stair. Each stair provides access to an exit at grade (though grade is not located at the same story for all stairs) as well as access to the roof via mechanical penthouses. In some stairs access to the penthouse and roof are controlled by doors at the top occupied floor, while in other stairs there is no controlled access to the roof.

Codes and Standards

Applicable codes and standards that apply to this building include the following in addition to other codes and standards listed elsewhere in this report:

- The International Building Code (IBC) – 2012 Edition
- NFPA 101, The *Life Safety Code* – 2012 Edition
- 2010 ADA Standards for Accessible Design
- The General Services Administration Facilities Standards for the Public Building Service (PBS P100) – March 2014

Phase 1 –Scenario One: Utilization of the Existing SSA Layout

Space Programming

Scenario 1, as indicated in the scope of work, is to utilize the original SSA furniture layout to minimize impacts to the electrical and mechanical support systems in the building. Given the limited time for this report, exact locations of available in floor electrical connections could not be verified and the PDF furniture layouts provided by GSA were used to evaluate available workstation spaces. See the attached diagrams.

- Given the original configuration of the SSA layout, all five floors of the South Building would be needed to accommodate the 1,500 people programmed for this project. A total of 1,472 seats were tabulated from the original plans with an additional 57 spaces identified for infill within the original cubicle areas. See below for a breakdown of seats available per floor:

Floor	SSA Seat Count	Possible Infill	Total
First Floor	354	13	367
Second Floor	129	0	129
Third Floor	461	22	483
Fourth Floor	323	14	337
Fifth Floor	205	8	213
<i>Total</i>	<i>1472</i>	<i>57</i>	<i>1529</i>

- During the site walkthrough, additional electrical penetrations in the floor appeared available in the second, third, fourth, and fifth floors. These areas either showed file storage functions or no furniture on the plans provided. Exact locations were not determined in the limited time on site but these areas could be evaluated further if this option is pursued. It appears that the use of the first floor may be eliminated if adequate power is provided on the remaining floors.
- The sizes of the workstations provided in the SSA layout are approximately 8x6 or 8x8 which are within the requirements for standard workstations for GSA.
- Some floors contain individual enclosed office spaces; these have not been included in workstation counts.

In addition to the workspace analysis, GSA requested the following support spaces be addressed. It appears that these spaces may be accommodated with limited additional construction.

- Six existing telephone/data closets are provided on floors one through four and three closets are provided on the fifth floor. They are configured so that there is full coverage of a given floor without exceeding the maximum distance for the cabling runs.
- There are two existing 1,000 square foot data rooms, one on the second floor and one on the fourth floor. GSA requested a minimum 300 square foot data room, which either of these spaces can accommodate.
- GSA has requested three (3) classrooms for 25-35 people. On each floor there appears to be an existing enclosed areas that could support this function. Further discussion with GSA will determine which areas are preferred. The design team would then need to verify whether the walls extend to the ceiling for the selected areas if full enclosure is required.
- A 10,000 square-foot high density storage area is also included in the program with the request that it be located as close to ground level as possible. The record drawings indicated that the area adjacent, and to the west of the loading dock on the ground level (along Pearl Street) is a slab on ground, which most likely will be capable of supporting a uniform distributed load of 180 pounds per square foot of high density storage. However, the available record drawings do not have a sectional view of the slab on ground in question. The slab thickness and reinforcement, therefore, cannot be determined. Furthermore, in order to ascertain that the existing slab on ground is capable of supporting the high density storage, the subgrade modulus of the soil supporting the slab will need to be determined.

Code Analysis

See the next section of the report "Life Safety" for detailed code analysis discussion of the Occupancy Type, Construction Type, and egress features. Also see the attached diagrams for egress capacities at each fire stair and travel distances for egress. The following general items are noted:

- The calculated occupant load per NFPA 101 and the 2012 IBC is 1 person per 100 SF of gross floor area for Business Occupancy. The attached diagrams indicate the maximum calculated occupant load for each floor based on this aspect of the code, though the egress components as designed can handle a larger occupant load. The authority having jurisdiction shall ultimately determine the allowable occupant load. Also note that these allowable totals may exceed the occupant loads that the HVAC system can support.
- The third floor has a calculated occupant load of 1,999 persons, but only has egress capacity (as currently configured) for 1,241. There are some modifications that could be made to the stairs to bring capacity up to around 1,650 but that would still be 350 short of the necessary egress capacity.
- Per the Codes, a minimum of two accessible means of egress from each floor are required, and of those two, one accessible means of egress must be an elevator. It has not been determined whether the elevators as currently configured meet the code requirements to be used as an accessible means of egress.
- Elevator lobbies are not required if the building is sprinklered in accordance with specific code requirements, which have not been evaluated. Regardless of the presence of sprinklers, elevators serving floors over 75 feet above fire department access are required to be in lobbies. The fifth floor elevators appear to have lobbies, but surveys have not determined if they meet requirements, and they would not be required unless the floor level exceeds the 75-foot limit.
- Access to the elevators and stairs in Core 8 on the fifth floor is provided by way of an escalator lobby. It is not clear at this time that this is permissible per the Codes. Therefore, the stair is not counted in the available means of egress for the fifth floor (code requirements can still be met without it) and the accessible elevator noted elsewhere in this report must be located in Core 11.
- There are two sets of escalators in the south building. Neither is considered a means of egress for the purpose of this report as it is unclear whether the government intends to use them. Both are located in enclosed lobbies assumed at this point to be appropriately rated enclosures. NFPA 101 allows existing escalators that were previously approved as a means of egress to continue to be used as such under very limited conditions, though the gain in occupant load is severely limited. As such, it does not seem to be reasonable to count on them as means of egress at this time.
- There is an escalator lobby at Core 12 (clouded on the second floor code analysis plan) with a corridor running past it. There are a couple of code issues related to this area. The corridor has double doors at either end, separating the corridor from the office area, and separate doors from the corridor into the escalator lobby. The doors at the west end of the corridor create a dead end situation on the office side of the doors, unless they are useable from the office side to continue egress. However, if egress continues through these doors, the path must then either go into the escalator (believed to be the original intent) or into another corridor to the east and on to Stair 7-4. If egress is to bypass the escalator, the doors at the east end of the corridor must swing in the opposite direction.
 - If the escalators are intended to be used, it will be necessary to evaluate them for a means of egress, or else the following must be resolved: If the escalators are not going to be

returned to service, or are not an acceptable means of egress, then egress must continue freely past the escalator lobby. Assuming the lobby is appropriately rated, the recommendation would be to remove both sets of doors at both ends of the corridor outside the lobby so that no dead ends are created.

- The building appears to be generally compliant with the requirements of the ADA. The toilet rooms in all of the cores have a toilet stall which appears to be accessible, however a brief survey of one toilet room indicated that not all clearance tolerances are met. A list of non-compliant dimensions should be prepared and modification made to bring these toilet rooms into compliance. An option might be to convert the two smaller toilet rooms in cores 8 and 9 into dedicated accessible rooms rather than bringing all rooms into compliance. The time and cost savings would be dependent on the actual modifications necessary.
- The attached code analysis diagrams indicate several doors on the second floor that swing against the flow of egress. The swings on these doors should be reversed. One pair of doors specifically called out on the diagrams provide access between two spaces that each are required to have two exits based on the occupant loads in each space. As part of the means of egress from one, the door swing meets code, but from the other it does not. The simplest remedy, assuming a separation between rooms is no longer required would be to remove the doors and allow free passage in both directions. Stair 7-4 from the upper floors and Stair 7-2 from the garage levels converge at the first floor. Code requires the egress capacities for which the stairs are designed to be combined at this point. The combined egress capacity must be maintained from the point of convergence to the exit discharge, at the street in this case. Since the street is not at the first floor elevation in this location, the egress path from the point of convergence traverses another stair to the street level and exits via a double door. The allowable egress capacity of the stair and double door out to grade is less than the combined loads of 7-2 and 7-4 as required. In this case, the combined capacity of the Stairs 7-2 and 7-4 are limited to the capacity of the exit, and the allowable capacity of each stair cannot be easily determined. A similar condition exists at Core 11 where stairs from above and below converge, each with a capacity of 147, but the door to the exterior at the point of convergence only has a capacity of 160.
- Several of the egress stairs have a width of 7'-5" (89"). Code requires that there be a handrail within 30" of any portion of the stair used for egress. For these stairs wider than 60", there must either be a center handrail added to these stairs, or else the egress capacity must be reduced by the portion of the stair not within 30" of the existing handrails. In this case, the middle 29" would not be counted toward egress capacity - a loss of about 90 persons for each such stair. The stair capacities shown on the code analysis diagrams reflect the lower capacity since the extra handrails are not currently present.
- Because the building currently does not have barriers to personnel traffic and HVAC air flow between the south and north buildings on the third and fourth floors, the diagrams indicate some locations where it might be helpful to install partitions to block access to the north building. On the third floor, two of the north building stairs are necessary to be accessed for egress from the kitchen / server areas. Depending on the owner's intended use for the building, it should be noted that providing access to these stairs may allow access to other parts of the north building without other modifications.
- The code requires photo-luminescent markings in stairs that serve high rise buildings. This building is considered a high rise building and such requirements need to be reviewed for the extent to which they apply.

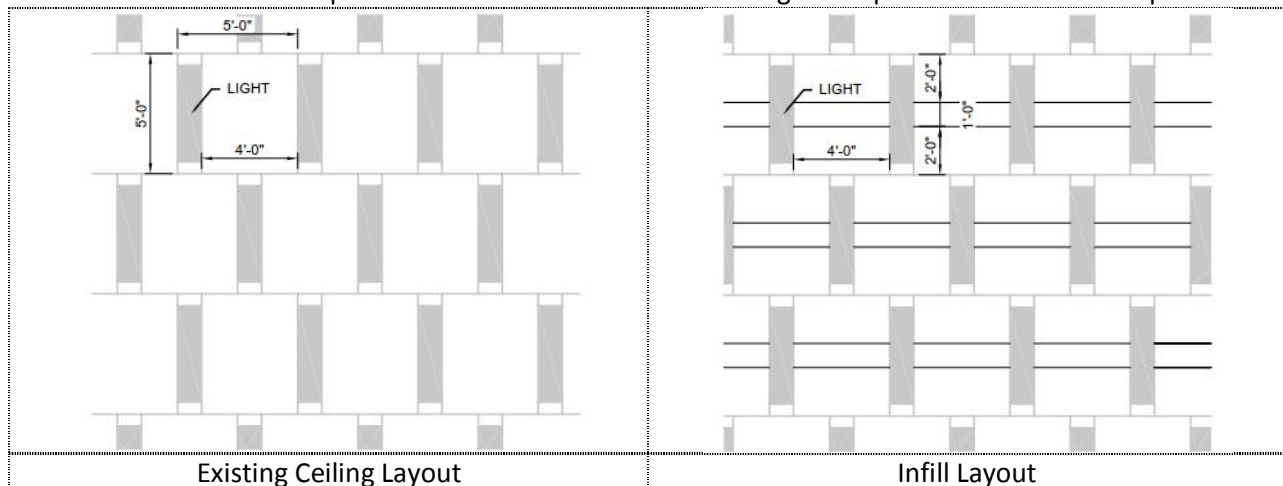

Interior Finishes

Given this scenario is to utilize the latest layout of the space, finish work would be limited to that required to provide a professional business atmosphere. GSA has directed that new carpet and paint be provided in the areas that they will inhabit. WR&A concurs with this direction as the condition of the carpet is rough and the walls are scuffed or damaged. WR&A recommends that areas with VCT outside of the building cores be removed and replaced with carpet for a consistent appearance throughout the open office area.

As noted previously, some of the walls are faced with a plastic laminate wall covering that is chipped and damaged in some areas. This damage is not easy to repair so WR&A proposes the following solutions:

- Replace panels that have multiple areas of damage and clean plastic laminate surface of panels to remain. Provide 1x prefinished wall strips at all wall panel seams to hide chipped wall edges.
- Cover all plastic laminate covered wall surfaces with ¼" thick gypsum wall panels, prepare seams and paint entire wall surface.

The existing ceiling as noted previously is in poor condition. The grid is typically 5-foot x 5-foot with a 1-foot x 4-foot linear light fixture. The panels are fabric covered and have collected years of dust and dirt which cannot be easily cleaned. WR&A recommends replacing the ceiling tiles with new. The grid is in fair condition but given its odd dimension, replacement panels may need to be custom cut. An alternative to custom cut panels would be to add intermediate grids to provide standard sized panels:

Existing Ceiling Layout

Infill Layout

Phase 1 –Scenario Two: Maximized Density Allowable

Space Programming

Scenario 2, as indicated in the scope of work, is to maximize the utilization of the existing floor plates to minimize the amount of area required to accommodate 1,500 people. To determine the amount of people allowable, the design team needed to determine the limiting factors for occupancy of each floor.

- The following limitations per floor have been determined:

Floor	Configuration (6x6 cubicle)	Occupant Load (B)	Egress Capacity	Plumbing Fixture Capacity	Mechanical System Capacity*
First Floor	n/a	971	n/a	2,200	471
Second Floor	n/a	880	1,044	2,200	594
Third Floor	748	802	894	2,200	594
Fourth Floor	852	802	894	2,200	594
Fifth Floor	n/a	445	694	1,050	337

* Mechanical capacity based on entire floor area including offices, conference/classrooms, telecommunication rooms, etc.

- Given these limitations, the mechanical capacity is the determining factor for the number of workstations able to be provided per floor in most cases. Using nominal 8x8 workstations, a total of 1,632 seats can be provided on floors two through five. See below for a breakdown of seats available per floor and the attached diagrams:

Floor	Seat Count
First Floor	n/a
Second Floor	354
Third Floor	483
Fourth Floor	522
Fifth Floor	273
<i>Total</i>	<i>1632</i>

- The sizes of the workstations provided are approximately 8x8 which are within the requirements for standard workstations for GSA.
- Some floors contain individual enclosed office spaces; these have not been included in workstation counts.

The additional support spaces required would be accommodated as shown in scenario 1 utilizing existing constructed spaces.

Code Analysis

The code allowed occupancy loads and the egress capacities of each portion of the means of egress from the building consistently exceed the actual occupant loads imposed either by furniture arrangements or HVAC capacities. Therefore, the code related issues and deficiencies are the same for this scenario as they were for the previous scenario. Refer to the code analysis above.

Interior Finishes

As noted in scenario 1, the existing wall, floor and ceiling finishes should be replaced and/or repaired. Given the reconfiguration of the workstations, additional work will need to be done to modify the existing topping slab and walker duct so that new electrical and communications connections can be accommodated in the floor. Full layouts and configurations of the existing floor power/data duct system have not been completed as part of this study to determine the extent of renovation required.

Recommendations

- Architectural #1 (A-1): Replace carpet, VCT, and transition strips on all floors to be occupied.
- Architectural #2 (A-2): Repair or replace existing plastic laminate faced wall panels to provide professional business environment.
- Architectural #3 (A-3): Replace all existing acoustic ceiling tiles with new mineral fiber panels and metal grids as described in this report.
- Architectural #4 (A-4): Determine whether escalators will be re-energized and resolve issues on the second floor at Core 12 as described above.
- Architectural #5 (A-5): Confirm operability, and code compliance of all hardware on egress path doors.
- Architectural #6 (A-6): Identify and remediate all ADA non-compliance issues in toilet rooms or completely renovate small toilet rooms to be purely ADA compliant.
- Architectural #7 (A-7): Confirm whether any of the existing elevators meet the requirements for an accessible means of egress and if not, bring one elevator into compliance.
- Architectural #8 (A-8): Add code required photo-luminescent markings in stairwells.

Life Safety

General

Whitman, Requardt and Associates (WRA) visited the Metro West Facility on October 8, 2014 for a brief survey of the existing conditions. However, the time available for survey is insufficient to fully verify the condition of the existing Metro West Facility with regard to the applicable codes. GSA recently contracted Greenman-Pedersen, Inc. to assess the Metro West Facility for any significant code deficiencies. The resulting report, dated March 26, 2013, is titled "Fire Protection and Safety Management Survey of the Social Security Administration Metro West Building."

The Greenman-Pedersen report provides a code analysis of the Metro West Facility as an existing Business Occupancy. Since the occupancy will remain unchanged, many of the findings will continue to be relevant. Therefore, WRA's analysis will reference the Greenman-Pedersen report to supplement findings from the October 8th survey. WRA recommends that the life safety and fire protection deficiencies identified in the Greenman-Pedersen report be mitigated in addition to building modifications proposed in this study.

Codes and Standards

The applicable codes and standards for the new shelter to be provided at the Social Security Administration Metro West Facility include, but are not limited to, the following:

- The International Building Code (IBC) – 2012 Edition
- NFPA 1, *Fire Code* – 2012 Edition
- NFPA 13, *Standard for the Installation of Sprinkler Systems* – 2013 Edition
- NFPA 20, *Standard for the Installation of Stationary Fire Pumps* – 2013 Edition
- NFPA 72, *National Fire Alarm and Signaling Code* – 2013 Edition
- NFPA 101, *The Life Safety Code* – 2012 Edition
- The Federal Emergency Management Agency Congregate Care Sheltering Statement of Work – June 2014
- The General Services Administration Facilities Standards for the Public Building Service (PBS P100) – March 2014

Code Analysis

The Greenman-Pedersen report documents the existing egress arrangement for the complete Metro West Facility and finds no significant concerns for the occupancies present during the Social Security Administration's tenancy. The WRA analysis will focus primarily on the Metro West - South Building (South Building) as this is the anticipated location of the proposed office occupancy. The report seeks to clarify the means of compliance with the applicable life safety codes and standards. However, the final requirements are subject to the approval of the Authority Having Jurisdiction (AHJ). The Metro West Building is operated by the GSA; as such, the AHJ will be the GSA Mid-Atlantic Regional Fire Protection Engineer.

Occupancy Type

The occupancy use group of the planned re-utilization of the Metro West Facility is defined primarily as Business Use. This is consistent with the previous occupancy classification for the building and as indicated in the Greenman-Pedersen report. The cafeteria seating area is classified as Assembly Group A-3, which is the previous use classification for the space. Much of the existing basement level accommodates a parking garage and is classified as Storage Group S-2 Use. The remaining support spaces are considered accessory use areas as defined by the building code due to their relative size compared with the predominant occupancies, and have no impact with the overall building classification. The proposed Classroom spaces on the office floors are defined as Business Use, where occupant loads are below 50 people, and are classified as Assembly Group A-3 where occupant loads are equal to or exceed 50 people. The mechanical and electrical rooms, including any new telecom closets are classified as Factory Use F-1 spaces. The proposed high-density storage space is classified as a Storage Group S-1.

Building Construction Type

Although the use classification of the Metro West Facility will remain the same, this study attempts to confirm whether the existing building meets Table 503 of the IBC. In addition to the Business Use classification anticipated on the First, Third, Fourth and Fifth Floors of the South Building, the building additionally includes non-accessory Assembly A-3 Use areas (Cafeteria and Conference Rms.) and Storage S-2 Use group areas.

WRA was unable to verify the existence and continuity of all fire resistive elements during the October 8th site visit; however, the Greenman-Pedersen report documents the following:

“The floors are constructed of reinforced concrete supported by structural steel with spray-applied fireproofing. The columns are constructed of structural steel encased in sheetrock and spray-applied fireproofing. The roof consists of built-up materials on a concrete slab that is over corrugated steel pan. The assembly is supported by structural steel encased in spray-applied fireproofing. The construction appears equivalent to a Type II (222) classification as defined by NFPA 220 and Type IB construction as defined by the IBC.”

For the A-3 and B occupancy groups listed above, Table 503 of the IBC permits the gross floor area of the building to be unlimited in buildings of Type IB construction. With respect to the Storage S-2 Occupancy, Table 503 limits the gross floor area of the building to 79,000 square feet. The 79,000 square foot limitation is permitted to be increased to 296,250 square feet if the building is accepted by the AHJ as “fully sprinklered” and allowable increases for street frontage are incorporated in accordance with Section 506 of the IBC. The area of the largest floor is approximately 217,783 square feet.

For all anticipated occupancy groups, Table 503 of the IBC limits the building height to 11 stories above grade. The maximum height is permitted to be increased to 12 stories if the building is accepted by the AHJ as “fully sprinklered.” The existing Metro West Facility includes a 14-story North Building Tower, exceeding the 12-story limitation. However, the proposed re-occupancy will be limited to the five-story South Building. The area of renovation will be maintained below the 12-story limitation.

High-Rise Building

The highest floor level of the Metro West Facility is greater than 75 feet above the lowest level of fire department access. As such, the building is classified as a high rise and must comply with Section 403 of the IBC. The building is provided with an existing automatic sprinkler system in accordance with Section 403.3 of the IBC and is provided with a standpipe system in accordance with Section 403.4.3. The building is provided with an existing voice-type fire alarm system in accordance with Section 403.4.2 of the IBC.

At this time, WRA is unable to verify the existence of emergency responder radio coverage required in accordance with Section 403.4.5. However, Section 11.8.4.2.1 of NFPA 101 permits the use of two-way telephone communication between the emergency command center, elevator cars, elevator lobbies, and each floor level of exit stairs. Existing telephones are provided in the locations identified above.

Section 403.4.7 requires high rise buildings to be equipped with natural or mechanical ventilation for the removal of products of combustion. Natural ventilation is currently provided via existing manually operable windows.

Section 403.6 of the IBC requires a fire service access elevator to be installed in high-rise buildings with an occupied floor more than 120 feet above the lowest level of fire department vehicle access. The North Building Tower is currently not occupied and the shelter is expected to be located in the South Building. The requirements included in Section 403.6 of the IBC must be re-evaluated if the North Building Tower is occupied in the future. However, the requirements of Section 403.6 of the IBC do not apply to the shelter design.

A fire command center is required in high-rise buildings in accordance with IBC, Section 403.4.5. The fire command center requires a 1-hour fire resistance separation from adjacent areas. The existing Emergency Command Center (ECC) located on the ground floor serves as the building's fire command center, however, the separation from the adjacent atrium space does not appear to be fire resistance rated. A survey above the suspended ceiling was not performed to verify the integrity of the other walls for this room.

Secondary power is currently supplied to life safety systems via an existing emergency generator in accordance with Section 403.4.9 of the IBC.

Atrium Construction

A four-story atrium is provided between the North and South Towers. The atrium is separated from the remainder of the building via fire resistive construction, and beam-type smoke detection is provided and monitored by the building fire alarm system. However, the four-story atrium is not provided with a dedicated smoke control system, as required by Section 404.5 of the IBC.

Building Egress

The means of egress for the South Building includes five enclosed stairs. Three of the five exit stairs discharge directly to the building exterior while the remaining two discharge through the basement

lobby. The Greenman-Pedersen report documents that all exit stairs serving the South Building comply with the minimum construction requirements of NFPA 101. All stair doors do not require more than one action to release, are self-closing, permit re-entry, and positively latch. Existing exit remoteness exceeds one-third the diagonal dimension of the floor area served.

The five exit stairs for the South building provide an exit capacity for 1,132 occupants. The maximum anticipated occupant load of the proposed office areas is not expected to exceed 900 occupants per floor with exception of the 3rd floor due to the cafeteria. Please refer to the attached egress diagrams and the previous section for further information on building egress.

Recommendations

- Life Safety #1 (LS-1): Investigate the wall assemblies and atrium glass storefront for the Emergency Command Center (ECC) room. Provide the necessary fire-rated construction upgrades where needed.

Fire Protection

General

Whitman, Requardt and Associates (WRA) visited the Metro West Building on October 8, 2014 for a brief survey of the existing conditions. However, the time available for survey is insufficient to fully verify the condition of the existing Metro West Facility with regard to the applicable codes and GSA guidelines. The GSA recently contracted Greenman-Pedersen, Inc. to assess the Metro West Facility for any significant code deficiencies. The resulting report, dated March 26, 2013, is titled "Fire Protection and Safety Management Survey of the Social Security Administration Metro West Building." In addition a recent study was performed by WRA on the utilization of the facility as a congregate care shelter for FEMA. The report, dated June 20, 2014, is titled "Temporary Facility Analysis for the Metro West Building". Both reports will be referenced in this study as there is pertinent code and system evaluation information in the referenced reports.

The Greenman-Pedersen report provides a code analysis of the Metro West Facility as an existing Business Occupancy. This classification is relevant to the re-utilization of the building for office space as proposed in this study. Therefore, WRA's analysis will reference the Greenman-Pedersen report to supplement findings from the October 8th survey. WRA recommends that the life safety and fire protection deficiencies identified in the Greenman-Pedersen report be mitigated in addition to building modifications proposed in this study.

Existing Conditions

The Metro West Facility is provided with full-automatic sprinkler protection throughout with the exception of select electrical equipment areas, including the transformer rooms. The 14th Floor Mechanical Equipment Room and the Basement parking garage levels are protected via a dry-pipe sprinkler system due to the potential for freezing. The remainder of the Metro West Facility is protected via a wet pipe sprinkler system.

The wet pipe system provided is defined in NFPA 13 as a Circulating Closed-Loop System, which uses the chilled water return (CWR) piping from the HVAC system as sprinkler risers, mains, and branch lines. Valves are provided throughout the building such that upon activation of a sprinkler, the CWR system is changed over to "fire mode" and water is supplied to the sprinkler system. As the system changes from CWR mode to fire mode, water is supplied to the system by a head tank located on the 14th Floor of the North Building.

The Metro West sprinkler system is fed by an existing 8-inch combined fire and domestic water service main that enters the building from Greene Street. Two electrically-driven fire pumps are installed to supplement the municipal water pressure. The first fire pump is manufactured by Peerless and rated for 1,000 gpm at 125 psi. This fire pump is the primary pump for the building's standpipe-sprinkler system and serves the majority of the building. The second fire pump is also manufactured by Peerless and rated for 750 gpm at 87 psi. This fire pump serves only the Child-Care and Fitness Center's wet sprinkler system and the basement dry sprinkler zones. The sprinkler system is designed to provide 0.15 gpm/sq.ft. over the hydraulically most remote 1,500 sq.ft., located in the upper penthouse. Pendant-type, standard response sprinklers are provided throughout the majority of the building, however, the Child-Care and Fitness Center has quick response type pendant sprinklers.

A Class I wet standpipe system is provided with 2-1/2-inch hose connections and 1-1/2-inch reducers in cabinets located in the vestibules or just outside vestibules at each stairway. The recorded static pressure at the top of the standpipe is 55 psi.

Wet chemical fire suppression systems are provided to protect cooking equipment in the cafeteria. The systems were last tested in May, 2012 and the cafeteria equipment is currently abandoned in place. Shelter operators initially intend to provide catered food that is prepared off-site. If the cafeteria is re-opened for on-site food preparation in the future, chemical fire suppression systems must be re-tested and accepted by the AHJ prior to use.

Portable extinguishers appear to have been removed in the majority of the office areas of the South building. Extinguisher cabinets were observed as being empty and brackets were without extinguishers in several locations.

Codes and Standards

The applicable codes and standards for the proposed office occupancy at the Metro West Building include, but are not limited to, the following:

- The International Building Code (IBC) – 2012 Edition
- NFPA 1, *Fire Code* – 2012 Edition
- NFPA 13, *Standard for the Installation of Sprinkler Systems* – 2013 Edition
- NFPA 20, *Standard for the Installation of Stationary Fire Pumps* – 2013 Edition
- NFPA 72, *National Fire Alarm and Signaling Code* – 2013 Edition
- NFPA 101, *The Life Safety Code* – 2012 Edition
- The General Services Administration Facilities Standards for the Public Building Service (PBS P100)– March 2014

Code Analysis

For the purposes of this report, this code analysis is not considered a comprehensive analysis of the compliance of the entire Metro West Facility fire protection systems. The Greenman-Pedersen report identifies several items related to fire protection systems that were out of compliance at the time of the March, 2013 report. This analysis is intended to identify new requirements that will take effect as a result of the proposed re-occupancy of the building in accordance with the IBC, NFPA 101 and GSA PBS100 standards.

- **Area of Sprinkler System Application**

Section 903.2.11.3 of the IBC requires full, automatic sprinkler protection throughout all buildings with a floor level having an occupant load of 30 or more that is located 55 feet or more above the lowest level of fire department vehicle access. The 5th floor of the south building is at an elevation higher than 55 feet above the level of fire department access. The Metro West Facility is currently provided with automatic sprinkler protection throughout nearly all spaces. However, select electrical utility rooms are currently without sprinkler protection. The building cannot currently be

considered “fully sprinklered” for the purposes of applying reductions in minimum code requirements.

- **Type of Sprinkler**

Section 903.3.2 of the IBC requires listed quick-response sprinklers to be installed throughout all light hazard occupancies. The existing sprinklers installed throughout the proposed space are standard-response, link-and-lever-type sprinklers. Section 8.3.3.1(3) and 8.3.3.1(4) of NFPA 13 permits standard response sprinklers in existing light hazard systems where modifications or sprinkler head replacement occurs.

- **Standpipe Pressure**

Section 7.8 of NFPA 14 *The Standard for Installation of Standpipe and Hose Systems* requires a “minimum residual pressure of 100 psi at the outlet of the hydraulically most remote 2-1/2-inch hose connection.” The existing standpipe system serving the Metro West Facility currently provides a static water pressure of 55 psi at the top of the standpipe, per the Greenman-Pedersen report.

- **Portable Extinguishers**

Section 906.1 of the IBC requires portable extinguishers throughout Group B buildings. It was observed that portable extinguishers were missing from the majority of the existing cabinets and wall brackets in the proposed office areas.

Recommendations

In accordance with the Code Analysis provided above, WRA recommends the following actions:

- Fire Protection #1 (FP-1): The existing Circulating Closed-Loop Sprinkler System serving the Metro West Building is not fail-safe as it requires positive action by isolation valves to operate in fire mode. While the applicable codes do not specifically prohibit the use of Circulating Closed-Loop Sprinkler Systems, GSA Mid-Atlantic Region Systems Administrator Anthony Rosato has identified concerns about the reliability Metro West Facility sprinkler system. Specifically, the building has previously experienced instances where a single sprinkler has been activated and/or damaged. Depending on the location of sprinkler activation within the building, water flow from a single sprinkler may not be sufficient to activate the sprinkler system flow switch and initiate system changeover to fire mode. The 770 gallon head tank on the 14th Floor of the North Building supplements the sprinkler system during the transition to fire mode. When water flow is not registered and the changeover to fire mode is not initiated, water from the head tank will flow freely into the room of sprinkler operation until a low-level sensor in the head tank is activated. WRA concurs with Section 4.2.9 of the Greenman-Pedersen report that the sprinkler system should be replaced if there is continued occupancy of the Metro West Facility. If occupancy is limited to the South Building, the GSA Fire Protection Engineer may permit the partial replacement of the wet-pipe sprinkler system serving the South Building only.
- Fire Protection #2 (FP-2): Modify the existing sprinkler layout to comply with NFPA 13 requirements for system coverage after new interior partitions have been constructed.

- Fire Protection #3 (FP-3): Extend automatic sprinkler system coverage to all areas that are currently not sprinklered.
- Fire Protection #4 (FP-4): Replace all standard-response, link-lever type sprinklers installed on floors to be occupied by the proposed office areas with quick-response sprinklers.
- Fire Protection #5 (FP-5): Documentation of required testing is out of date for the following systems: fire pumps, dry-pipe sprinkler systems, and standpipe systems. Verify that all fire protection systems are inspected and tested in accordance with NFPA 25 *Standard for the Inspection, Testing, and Maintenance of Water-Based Fire Protection Systems*, 2014 edition.
- Fire Protection #6 (FP-6): The standpipe system must be modified to deliver 100 psi at the top of the standpipe. The existing fire pump configuration must be replaced to meet the 100 psi minimum. Conversely, system designers may seek a variance to allow a lesser pressure at the top of the standpipe while maintaining the existing fire pump configuration, provided that supplementary pressure provided by fire department apparatus can be demonstrated to provide sufficient pressure at the top of the standpipe. This variance application must be approved by the AHJ for the City of Baltimore in addition to the GSA AHJ.
- Fire Protection #7 (FP-7): Provide portable fire extinguishers throughout the proposed office areas in the South Building in accordance with NFPA 10.

Fire Alarm

General

Whitman, Requardt and Associates (WRA) visited the Metro West Building on October 8, 2014 for a brief survey of the existing conditions. However, the time available for survey is insufficient to fully verify the condition of the existing Metro West Facility with regard to the applicable codes and GSA guidelines. The GSA recently contracted Greenman-Pedersen, Inc. to assess the Metro West Facility for any significant code deficiencies. The resulting report, dated March 26, 2013, is titled "Fire Protection and Safety Management Survey of the Social Security Administration Metro West Building."

The Greenman-Pedersen report provides a code analysis of the Metro West Facility as an existing Business Occupancy. However, many of the findings will continue to be relevant if the building is converted from the current office layout. Therefore, WRA's analysis will reference the Greenman-Pedersen report to supplement findings from the October 8th survey. WRA recommends that the life safety and fire protection deficiencies identified in the Greenman-Pedersen report be mitigated in addition to building modifications proposed in this study.

Existing Conditions

The Metro West Facility is provided with an existing fire alarm system with voice-type audible notification. The main fire alarm control panel (FACP) is a Simplex brand, 4100U model control panel located in the Emergency Control Center (ECC) on the ground floor level of the atrium. The main Simplex FACP monitors remote fire alarm control panels located throughout the building for status. Receipt of an alarm signal at the main Simplex FACP currently initiates simultaneous evacuation of all floors in both the North and South Buildings. Signaling line circuits and notification appliance circuits are Class A as defined by NFPA 72. Secondary power is provided via batteries and connection to the emergency generator. The elevators are provided with Phase I emergency recall features and Phase II emergency operation features. The Metro West Facility fire alarm system is not currently monitored by an off-site, UL-listed central station.

The ECC additionally contains a secondary Notifier brand FACP that currently monitors fire alarm equipment in the former Child-Care Center. The GSA building engineer indicated during our October 8th survey the Notifier system panel is not interfaced with the main Simplex FACP. Alarm and trouble signaling for the Notifier system is not transmitted to the main FACP and general evacuation signaling within the Child-Care Center is not activated when the Simplex system goes into alarm.

Spot-type smoke detectors are currently provided in elevator lobbies, elevator machine rooms, elevator shafts, the former child development center, the main switchgear room, the UPS room, the battery equipment room, the fitness center, in vertical conveyor rooms, in equipment rooms with fire alarm control panels, adjacent to automatically-closing doors, and near each escalator opening. Duct-type smoke detectors are provided on the supply and return side of HVAC systems. Beam detectors are provided in the atrium and main switchgear room. The atrium is not provided with a smoke-evacuation system.

The GSA typically defines the "useful life" of a building fire alarm system to be 25 years. The site survey performed on October 8th was insufficient for WRA to confirm that all control equipment associated

with the fire alarm system serving the South Tower is less than 25 years in age. However, the main Simplex FACP located in the ECC appears to have been installed in the 2000's and was most recently tested in August of 2012. The Greenman-Pedersen report indicates that there are currently no problems with system audibility.

Codes and Standards

The applicable codes and standards for the proposed office occupancy at the Metro West Building include, but are not limited to, the following:

- The International Building Code (IBC) – 2012 Edition
- NFPA 1, *Fire Code* – 2012 Edition
- NFPA 13, *Standard for the Installation of Sprinkler Systems* – 2013 Edition
- NFPA 20, *Standard for the Installation of Stationary Fire Pumps* – 2013 Edition
- NFPA 72, *National Fire Alarm and Signaling Code* – 2013 Edition
- NFPA 101, *The Life Safety Code* – 2012 Edition
- The General Services Administration Facilities Standards for the Public Building Service (PBS P100) – March 2014

Code Analysis

While deficiencies were noted in our October 8th survey, the fire alarm system appeared to be operational and generally conforming with nationally recognized design standards and codes. For the purposes of this report, this code analysis is not considered a comprehensive analysis of the compliance of the entire Metro West Facility fire alarm system. The Greenman-Pedersen report indicates that the facility fire alarm system is largely in compliance for the occupancies present in March of 2013, and the proposed re-occupancy should not impact this assessment due to the same use of the building.

- **System Monitoring**

Section 907.6.5 of the IBC states that fire alarm systems required by the IBC must be monitored by an approved supervising station provided in accordance with NFPA 72. The Greenman-Pedersen report indicates that the Metro West building does not currently automatically transmit system status, including alarm signals, to an approved central station or the fire department. The ECC does not comply with requirements for a proprietary, on-site supervising station.

- **Mass Notification**

Section 7.14 of the PBS P100 requires a mass notification system designed in accordance with NFPA 72 to be installed in GSA-occupied buildings. The existing Metro West fire alarm system provides the emergency voice message capabilities required by the PBS P100. However, Section 7.14 states that "visible notification appliances must be the same type as used for fire alarm system visible notification appliances; however, they must not be identified by the word "FIRE." The existing visual notification appliances provided in the Metro West Facility are identified by the word "FIRE." Additionally, the digital voice messaging will need to be updated to provide mass notification emergency messaging. Emergency voice messaging content shall meet GSA specifications.

- **Child-Care System Interface**

During our October 8th survey, the GSA building engineer noted the Child-Care Center's Notifier fire alarm system is not interfaced with the main Simplex FACP. Section 907.5 of the IBC requires that a fire alarm system shall initiate occupant notification upon activation. The fire alarm systems require an interconnection to transmit alarm signals for monitoring and to activate occupant notification for general evacuation signaling.

Recommendations

In accordance with the Code Analysis provided above, WRA recommends the following actions:

- Fire Alarm #1 (FA-1): Provide all equipment and system programming necessary to install a new Digital Alarm Communicator Transmitter (DACT) in the ECC. The new DACT must have two dedicated land-line phone connections to transmit fire alarm system status to a UL-listed, off-site central monitoring service.
- Fire Alarm #2 (FA-2): Modify the existing audible and visible notification appliance layout to comply with NFPA 72 requirements for system coverage after new interior partitions have been constructed.
- Fire Protection #3 (FA-3): Documentation of required testing is out of date for the fire alarm systems. Verify that the fire alarm systems are inspected and tested in accordance with NFPA 72.
- Fire Alarm #4 (FA-4): Replace all fire alarm notification cover plates that are marked "FIRE" with new cover plates that are marked "ALERT" and update digital voice content to address mass notification messaging.
- Fire Alarm #5 (FA-5): Test the Notifier fire alarm system to verify interconnection with the Simplex FACP. Provide the necessary interface between systems where it's confirmed none exists.

Mechanical

General

The existing mechanical infrastructure was installed in 1979 and is aging, but well maintained. Although the building has been unoccupied for about a year, systems should be operational with minimal maintenance according to maintenance staff. The existing systems were designed for office usage and will have adequate heating, cooling, and ventilation for a typical office usage. From a HVAC perspective, ventilation will be the limiting factor for total occupancy. There are adequate numbers of water closets and lavatories for the initial proposed occupancy of 1,500 administrative staff, but bottled water stations or new drinking fountains will be required to meet current code requirements.

The mechanical recommendations discussed below will apply to both Scenario 1 and Scenario 2 and are recommended to correct code deficiencies and remedy significant performance issues.

Existing Conditions

Heating and cooling for the building is provided through district chilled water and steam systems. The main portions of the building are conditioned by ceiling mounted fan coil units provided with outside ventilation air through dedicated outside air handling units with desiccant dehumidification systems. Special use spaces such as the main lobby, existing child care center, dining area, and other portions of the link between the north and south buildings are served by dedicated air handling units that operate independently.

Central Plant

Cooling for the building is provided through a district chilled water system. The GSA currently has a contract for 500 tons of chilled water supply, but the system has capacity for up to 1500 tons of chilled water. In addition, there is a separate pumping system and connections for temporary chillers if the district chilled water system is not available. The district chilled water is pumped through two plate and frame heat exchangers to transfer cooling to the independent building chilled water system. Building chilled water is distributed to fan coils and air handling units throughout both the north and south towers.

Heating and domestic hot water generation for the building is provided through the district steam system. Incoming steam is passed through a pressure reducing station and distributed to steam to water heat exchangers and desiccant system react coils. Four steam to water heat exchangers are used to generate domestic hot water and additional heat exchangers are used to generate heating water that is distributed to exterior fan coils and air handling units throughout the building. Steam is distributed directly to the outside air desiccant dehumidification system react coils used to prevent excessive humidity in the building. In addition, there are direct steam injection tubes used to humidify outside air during the winter.

The steam system has been de-energized due to the building's current unoccupied status, but it is operational and can be re-energized.

Outside Air Ventilation

The south tower is served by a dedicated 35,236 cfm outside air system that incorporates a desiccant wheel, cooling coils with associated chiller, a heating water preheat coil, and a steam react coil for the desiccant wheel. The existing chiller is known to have a refrigerant leak and the associated refrigerant monitor has been disconnected to prevent nuisance alarms. The outside air system is not safe to operate without repair.

The north tower is served by a dedicated 41,381 cfm outside air system that utilizes a Kathabar liquid desiccant system. This system is operational, but requires high maintenance. It is limited to serving the north tower that is not currently considered for occupancy.

The drawings show duct risers running down shafts from the outside air units to distribution ductwork on each floor. Exhaust ductwork from toilet rooms and the return air plenum runs up the shafts to exhaust fans. Fire dampers are shown at shaft wall penetrations for the outside air ductwork and associated exhaust ductwork, but current codes require combination fire/smoke dampers for this application.

Special Purpose Spaces

There are four central air handling units that provide conditioning to the link portion of the building connecting the north and south towers. The units also provide conditioning to the lobby, day care center, and dining areas. The units are variable air volume with independent outside air intakes. The units supply terminal boxes that modulate supply air to each space as required to maintain space temperature set points. The building is equipped with typical toilet room exhaust fans and a garage ventilation system. These systems are operational.

There is a large existing dining hall and associated kitchen and cafeteria. The food service equipment and furniture was removed when the building was decommissioned. Meals would need to be catered unless the kitchen is renovated.

Fan Coils

The existing office spaces in the south and north towers are conditioned with fan coils mounted above the ceiling. The units circulate air through a plenum return and are typically equipped with six inch diameter outside air duct connections. Exterior units and units mounted on the top floor have heating and chilled water coils. Units on the interior have only chilled water coils. Supply air is supplied to the open office areas through continuous linear slot diffusers integrated with the acoustical ceiling tiles.

Record drawing information for system design capacities is limited, but the fan coil sensible capacity is sufficient to support about one cfm/square foot of conditioned supply air to the occupied spaces. This will be adequate for cooling and heating typical dormitory and office spaces.

Controls

The building has a digital automatic temperature control system. The maintenance staff indicated that the system is operational overall, but that some testing and validation in occupied mode will be required to ensure controls are operating properly due to the system age.

Plumbing System

The plumbing system consists of domestic cold and hot water risers, instantaneous domestic hot water steam to water converters, small hot water storage tanks, and a hot water recirculation system. Each domestic hot water generator is capable of producing 15 gpm of 120 degree Fahrenheit water, for a total capacity of 60 gpm.

Four bathroom groups are located on the second through fourth floors of the South Building. The first floor has additional locker rooms serving the old fitness center, which have shower facilities, water closets, and lavatories. The fifth floor of the South Building has fewer toilets due to its smaller footprint. In addition to the group toilets, additional toilets are located in the child care center, but this area is not planned for use as part of this renovation.

Please see the "Existing Plumbing Fixture Count" table on the next page for the number of existing fixtures. Each toilet room has one accessible water closet and accessible lavatories. One accessible shower is provided in each locker room as well.

The adequacy of the existing plumbing system is discussed in the code analysis section below.

Existing Plumbing Fixture Counts – South Building						
Toilet Room Location	Projected Usage	Water Closets	Urinals	Lavatories	Drinking Fountains	Notes
1st Floor						
Locker Rooms	Male	2	1	2		
Locker Rooms	Female	3		4		
Core 7	Male	3	2	2		
Core 7	Female	8		5		
Core 8	Female	5		4		
Core 9	Male	2	1	2		
Core 10	Male	3	2	2		
Core 10	Female	8		5		
Core 11	Male	3	2	2	1	
Core 11	Female	5		4		
1st Total	Male	13	8	10	1	
1st Total	Female	29		22		
Maximum Occupancy (IPC)		1710		1110	100	Max # meeting both gender's requirement
2nd – 4th Floor	(Typical Each Floor)					
Core 7	Male	3	2	2		
Core 7	Female	8		5		
Core 8	Female	5		4		
Core 9	Male	2	1	2		
Core 10	Male	3	2	2	1	
Core 10	Female	8		5		

Core 11	Male	3	2	2		
Core 11	Female	5		4		
2-4th Total	Male	11	7	8		
2-4th Total	Female	26		18		
Maximum Occupancy (Per Flr) (IPC)		1530		870	100	Max # meeting both gender's requirement
5th Floor						
Core 8	Female	5		4		
Core 9	Male	2	2	2		
Core 10	Male	3	2	2		
Core 10	Female	8		5		
5th Total	Male	5	2	4	1	
5th Total	Female	13		9		
Maximum Occupancy (Per Flr) (IPC)		630		390	100	Max # meeting both gender's requirement
Maximum South Building Occupancy		6,930		4,110	500	Max # meeting both gender's requirement

Codes and Standards

- 2012 National Standard Plumbing Code
- 2012 ICC International Mechanical Code
- 2010 ASHRAE 90.1 Energy Standard for Buildings Except Low-Rise Residential Buildings
- 2010 ASHRAE 62.1 Ventilation for Indoor Air Quality

Recommendations

Two scenarios are under consideration. In Scenario 1, the South Building will be reoccupied based on the previous furniture plan layout. In Scenario 2, workstation density will be maximized in order to limit required space. In Scenario 2, workstation density will be limited from an HVAC and plumbing perspective by the ventilation air available to the open office area. The key considerations for the building are ensuring adequate ventilation, heating and cooling, and plumbing fixtures for the initial projected occupancy of 1,500 administrative office staff. The primary requirements are increased drinking fountain facilities, HVAC and plumbing zone modifications to isolate the unused North Building and support code required egress corridors, HVAC modifications to support new conference and meeting space, and additional combination fire/smoke dampers at shaft walls.

The recommendations for HVAC and plumbing system upgrades apply to both Scenario 1 and 2. However, Scenario 1 recommendations will apply to the entire South Building while Scenario 2 recommendations will only apply to the portions of the South Building on floors 2 through 5 occupied by the new tenant.

Central Heating and Cooling Plant

There are no code issues with the central plant infrastructure. However, the steam system must be energized and confirmed to be operational prior to occupancy to ensure domestic hot water, building heating, and outside air dehumidification is available.

The preliminary block load indicated that 500 tons of district cooling will be required to support occupancy of the South Building. This assumes that cooling in unoccupied areas is disabled and that the chiller used to condition outside air ventilation is repaired and used to satisfy that additional load.

Outside air Ventilation

The primary occupancy for the south building will be administrative office. The 2012 International Mechanical Code ventilation rate for these occupancies is 0.06 cfm per square foot plus 5 cfm per person of outside air. The preliminary code analysis below is based on primary usage of the space as office space. The open plan area in the south building is not designed for concentrated occupancy, so the higher ventilation required for large meetings is not generally available. Small classrooms can be supported by minor modifications to outside air distribution ductwork that would redirect additional outside air to those spaces. A single 25 person conference room on each floor could readily be supported in that manner. Additional conference rooms on each floor would likely require provision of supplemental outside air drawn from new louvers in the wall and conditioned with fan coils.

Design data for the original building indicated that 0.1 cfm/sqft of ventilation air is provided to all open office spaces. This level of ventilation will support a density of 125 square feet per person in an office occupancy. Based on the approximate square footage of each floor's open office area, the maximum occupancy for each floor will be:

First Floor: 471 People
Second Floor: 594 People
Third Floor: 594 People

Fourth Floor:	594 People
Fifth Floor:	337 People
Total:	2,590 People

Special Purpose Spaces

The existing dining hall and kitchen are not expected to change usage. They were used as a dining hall and kitchen previously and will continue to be used for the same occupancy. The AHUs and exhaust fans serving the space should be tested to verify proper operation prior to occupancy. The child care center will be not be occupied as part of this renovation. No significant code issues are expected related to these spaces and the other lobby and circulation spaces served by the four building air handling units.

Additional telecom closets will be added as required to support the new office occupancy. A drycooler system will be located on the roof and glycol piping will be extended to dedicated self-contained fan coil units serving those closets. The current estimate is based on two additional closets per floor and two ton nominal capacity fan coil units.

Existing Fan Coils

While the fan coils have adequate capacity to condition typical office occupancies, they are configured to serve a large open office area. Modifications will be required if conference rooms are added in new locations or thermal zones need to be modified. Specifically, fan coils will have to be reconfigured to ensure return air can return to the fan coil plenum without being blocked by full height walls. Duct penetrations of shaft walls will need to be protected with combination fire/smoke dampers and associated smoke detectors. The egress path from the Dining Hall passing through the North Building will not be air conditioned and ductwork leading into that space will be capped to create a rated enclosure. Small electric cabinet heaters will be added on the perimeter where heating load calculations indicate freeze protection is required.

The original design drawings indicate that the fan coils provide 1 cfm/sqft for internal cooling loads throughout the open office areas with a sensible cooling capacity for internal loads of 13.3 btuh/sqft. Additional air flow is provided for perimeter space where envelope heating and cooling loads are seen. An analysis of the heat gain from a typical workstation shows that maximum workstation density is 75 sqft per person without exceeding the HVAC systems cooling capacity based on a single computer and monitor per workstation. This far exceeds the 125 sqft/person ventilation capacity, so cooling capacity is not a limiting factor for office density.

Controls

There are no code concerns with the building temperature control system. The FCUs are controlled locally through pneumatic thermostats in the return air grilles. The central DDC system controls the central plant and major AHUs. DDC temperature sensors have been located on each floor to enable the DDC system to monitor space temperature, but widespread monitoring of temperature over the entire floor plate is not provided.

Plumbing System

The total number of water closets and lavatories is adequate for the initial projected occupancy of 1,500 administrative staff. However, there will not be enough drinking water facilities. As noted in the recommendations below, Bottled water stations or new drinking fountains would be required to meet code requirements.

The code analysis is based on the 2012 National Standard Plumbing code and a 50 percent split between male and female occupants. Based on the code analysis, the proposed occupancy of 1,500 administrative office workers located in the South Building would have adequate water closets and lavatories regardless of whether Scenario 1 or 2 is selected. The overall South Building can support 4,110 people if additional drinking fountains or bottled water stations are provided.

While the building has accessible fixtures in each toilet room, they do not comply with current ADA standards from a dimensional standpoint and would require upgrades or a waiver.

The existing domestic water system will be adequate to support the proposed occupancy because occupancy will be significantly below the previous number of occupants. As noted in the recommendations below, the government should consider isolating the North Building domestic water system from the South Building domestic water system to avoid potential bacterial cross contamination from stagnant water in the unoccupied North Building.

In addition, current best design is to provide thermostatic mixing valves at each toilet room to minimize domestic hot water piping with water less than 131 degrees Fahrenheit. With this approach, the main circulation loop will be maintained above 131 degrees Fahrenheit while the mixing valves at each toilet room reduce the hot water temperature to 120 degrees Fahrenheit at the faucet.

Recommendations

Central Heating and Cooling Plant:

- Mechanical #1 (M-1): The district steam system should be re-energized and proper operation verified. The district steam system will be required to provide domestic hot water, building heating, and de-humidification of outside air. Domestic hot water is required by code for building occupancy.

Outside air Ventilation:

- Mechanical #2 (M-2): The refrigerant leak in the chiller serving the south tower refrigerant system should be repaired and the associated refrigerant monitoring system reactivated. The system is required to dehumidify outside air and prevent excessive humidity in the space. Historically, fan coil condensate pans have overflowed onto the ceiling tiles when the dehumidification system is not operational. In addition, peak cooling loads during the summer will significantly exceed the 500 tons of contracted district chilled water if the outside air chiller is not operational.

- Mechanical #3 (M-3): Combination fire/smoke dampers should be installed in the outside air and exhaust ductwork where they penetrate shaft walls on occupied floors. The International Building Code requires fire/smoke dampers in shaft wall penetrations connecting more than two stories. The existing drawings only show fire dampers in the duct penetrations of the shaft walls. This condition was not field verified, so confirmation of the existing condition is required. This is a fairly new code requirement, and many existing buildings do not comply. However, a change in building usage triggers a requirement to upgrade building systems to meet current codes unless a waiver is obtained.

Special Purpose Spaces:

- Mechanical #4 (M-4): Provide supplemental fan coils for new IT telecom closets on each floor. The expectation is that nine new closets will be required, each with a new 2 ton fan coil unit supported by one of two new dry-coolers on the roof. In addition, outside air ductwork will be slightly modified to extend more ventilation air into each of four classroom spaces. The ventilation air is essentially neutral to the space, so this will not impact the ability of the existing fan coils to properly condition the space.

Fan Coils:

- Mechanical #5 (M-5): An additional rated corridor will be installed for egress from the Dining Hall through the North Building as required to prevent a dead-end corridor. The HVAC system will require modifications to match the corridor layout. The ductwork system will be capped to avoid penetrations into the egress corridor. In addition, small electric cabinet heaters will be provided as required for freeze protection on exterior exposures. This egress corridor is not intended for day to day use, so it will not be air conditioned.

Controls:

The building operations staff indicated that the existing digital control system is operational, but that a number of minor repairs will likely be required during the restart of building systems.

- Mechanical #6 (M-6): Start-up existing HVAC systems and verify proper controls system operation to confirm proper system operation. Operate system in occupied mode for several days to a week to flush the building with fresh air. Perform IAQ test on each floor of the South Building to verify air quality is acceptable for new occupants.
- Mechanical #7 (M-7): Modify programming to limit HVAC system occupied mode operation to the occupied portions of the south tower and ensure operating schedule matches tenant requirements. Fan coils in unoccupied portions of the building can remain in unoccupied mode, but the central control system will need to be reprogrammed for that sequence of operation. Due to the hydronic piping configuration and sprinkler system, the entire building chilled water system and heating water system will need to be operational, but energy savings can be achieved by not operating fan coils. This recommendation is not a requirement for occupancy, but would reduce energy consumption.

Plumbing System:

The existing plumbing system is generally adequate for the proposed usage because the occupancy is not changing from the previous usage. Minor changes related to domestic hot water supply temperature, additional drinking water, and the deactivation of the steam humidification system are recommended to prevent operational problems and improve code compliance.

- Mechanical #8 (M-8): Adjust domestic hot water discharge set point to 131 F and provide thermostatic mixing valve at each toilet room group to prevent scalding and minimize potential for bacterial growth. Isolate the North Building Domestic water systems from the South Building systems to prevent cross contamination.
- Mechanical #9 (M-9): Provide bottled water stations throughout the office areas to ensure adequate supplies of drinking water.
- Mechanical #10 (M-10): The existing direct steam injection humidifiers for the outside air should be deactivated since chemicals in the steam are not suitable for indoor air quality.

Electrical

General

The existing electrical system is distributed from multiple stacked electrical closets on each floor. Each electrical closet accommodates 480/277 volt, 3 phase, 4 wire panels, 480-208/120 volt step down dry type transformers and 208/120 volt, 3 phase, 4 wire panels. The existing receptacle branch circuit wires are routed through the wire troughs and wire management system below 208/120 volt panels to the existing underfloor duct system. There are also supplemental UPS panel/circuits are provided in the electrical closets.

The existing 1120 kW, 480/277 volt, 3 phase, 4 wire emergency generator was installed in 2005 and a 8,000 gallon diesel fuel tank are dedicated to support the life safety loads for both north and south buildings. The existing fuel tank will provide minimum of 72 hours of emergency power for the life safety loads including the emergency/ exit lights, elevators and fire pumps.

Existing Conditions

The existing lighting system consists of recessed 1'x4' parabolic louver fluorescent lighting fixtures with T-8 lamps. The existing lighting fixtures are connected to the existing 277 volt lighting circuits. The existing lights are controlled by Metasys building management system and there are no local lighting switches on the floor. The emergency lights are provided throughout the space although the existing emergency lighting level was not adequate.

The existing power is provided by the existing furniture whips (4 circuit 8 wire system) include 4 phase conductors, 2 neutral conductors and 2 ground conductors provided from 208/120 volt panels via the existing underfloor ducts (wire management system).

There are multiple electrical closets with 480/277 volt panels and 208/120 volt panels on each floor.

There are no receptacles installed on the existing perimeter walls.

Codes and Standards

NFPA 70 National Electrical Code (NEC) Handbook, 2011 Edition

NFPA 70E Standard for Electrical Safety in the Workplace, 2012 Edition

NFPA 101: Life Safety Code, 2012 edition

(IEEE) Institute of Electrical and Electronics Engineers - All related Documents

IES Illuminating Engineering Society of North America -Related Documents

Phase 1 – Scenario One

The existing power is provided by the existing furniture whips (4 circuit 8 wire system) include 4 phase conductors, 2 neutral conductors and 2 ground conductors provided from 208/120 volt panels via the existing underfloor ducts (wire management system).

There are multiple electrical closets with 480/277 volt panels and 208/120 volt panels on each floor.

There are no receptacles installed on the existing perimeter walls.

Phase 1 – Scenario Two

The existing lighting fixtures shall be relocated to provide P100 and IES recommended lighting level for the optimized furniture plans and conference rooms. The existing lighting control zones shall be field verified and coordinated with the optimized furniture plans.

The existing lighting fixtures shall be relocated and/or additional lighting fixtures may require for the conference rooms with local re are no local light switches. New receptacles and telecomm outlets shall be provided in new conference room partition walls.

The existing emergency lighting fixtures shall be relocated and/or additional emergency lights shall be provided along the paths of egress and illumination levels shall be field verified to meet the life safety code requirements. New exit lights shall be provided to mark the paths of egress.

The existing furniture whip and locations of the furniture whip junction boxes shall be coordinated with the optimized furniture plans. Additional power poles shall be provided if the existing furniture whip junction boxes and available circuits are not adequate for the optimized furniture plans.

Recommendations

- Electrical #1 (E-1): Relocate the existing emergency lights and provide additional emergency lights to provide average illumination of 1 FC (footcandle) along the paths of egress.
- Electrical #2 (E-2): Provide new exit lights (green LED) to mark the paths of egress.
- Electrical #3 (E-3): Relocate and/or provide additional lights for the conference rooms. Provide local lighting control devices and receptacles in the conference rooms.
- Electrical #4 (E-4): Provide furniture whips from the existing underfloor ducts to the workstations.
- Electrical #5 (E-5): Provide additional power poles for the workstations receptacles and telecomm pathways as necessary.
- Electrical #6 (E-6): Revise the existing lighting control zones.

Cost Estimate

The rough order of magnitude cost estimate is provided within the analysis matrix based on each code or task upgrade. The costs are based on a subcontractor cost that includes overhead and profit. The general contractor cost was provided through a 25% mark-up to reflect bond, general conditions, tax and overhead and profit

Appendix A

Appendix B

EXISTING CONDITIONS ASSESSMENT - DRAFT

Project: Metro West Bldg. Survey Date: October 8, 2014
Project No: HFS 2448 Issue Date:
Issued By: Richard Hopkins Location: 300 N. Greene St.,
Baltimore, MD

Overview

We inspected the facility at 300 N. Greene St., Baltimore, MD on October 8, 2014 to evaluate the conditions of the existing servery and kitchen for reuse/refurbishment by a potential new tenant. The facility was last known to be in operation March 2014.

The building features a large open atrium dining area with a split servery design. The overall condition of the dining area is good. The overall condition of the servery is fair.

The bulk of the food service equipment has been removed. The remaining equipment are A) Serving counters, which are in fair condition and B) Exhaust hoods, which are in good condition. The built-in equipment in the counters, although fair to good condition, is considered to be serviceable. Some vendor provided equipment (beverage dispensers, bottle coolers, and detergent systems) should be replaced as a part of a new vendor contract. Storage and refrigerated rooms are also in fair to good condition. Depending on the length of the tenant lease, it may be appropriate to replace the walk in door panels as the doors are heavily damaged.

Option A - Catered Food

The repairs and equipment replacement for the servery would be a moderate cost estimated at \$185,000 to provide a full breakfast and lunch menu in the right-side (furthest from the building core) servery. For the projected 1500 person population, it is not recommended that the left-side servery area be brought back online for either catered meal service or on site prep Option B. Kitchen equipment to support Option A would include warming cabinets, worktables and hand sinks. Some rolling stock would likely be the property of the caterer. It is recommended that for both Options A and B that food service be provided using single service compostable service ware. The existing dishroom/potwash room would be largely converted into a non-food storage room for disposables. The potwash sink and drying areas would retain their functions.

Option B - On Site Food Preparation

Equipment upgrades for the servery in Option A also apply to Option B. Catering rolling stock provided by the caterer in Option A would be required to be purchased by the government. As all the cooking and preparation equipment has been removed, it is also necessary to purchase new equipment to support the reduced population of 1500 persons. The cost estimate of \$375,000 for Option B takes this into account. The existing utility hookups allow flexibility to match up a sufficient cooking battery to support operations. In some cases, additional infill (tables, carts) would be necessary as the line upon equipment would be scattered across the existing cooking batteries.

In addition to the new equipment costs, there needs to be a contingency for the cost of commercial cleaning and authorized service inspection and any needed repairs, which we assume to be minor as the operation last ran in March 2014. Equipment costs do not include any related utility installation or hookups.

We recommend some aesthetic upgrades be included to encourage participation. Suggestions include the addition of a coffee bar with espresso/cappuccino machine, recladding of the buffet counter's vertical surfaces (over existing ceramic tile) and new wall coverings throughout.

Appendix C

Analysis Code Matrix - Metro West South Building					
	SSA Layout	Optimized Layout	Requirement	ROM Cost (\$)	Recommendation
Architectural					
Occupancy	All five floors would need to be occupied with the existing SSA furniture layout with the information available at this point.	Floors 2 through 5 can accommodate the program space requirements but will involve additional work to infrastructure.	Program Space needs include fitting 1500 people, 10,000SF storage, 3 classrooms and supporting Data/Comms Rooms	\$ 11,250,000.00	Further discussion needed on which scenario will meet all the needs including cost and timeline.
ADA compliance - Restrooms	Required mounting height for accessories and fixtures per Chapter 6	Same as SSA layout	Existing fixtures and accessories in ADA designated restrooms are just out of compliance.	\$ 540,000.00	Modify other existing restrooms to meet the current requirements of ADA.
ADA compliance - Restrooms	Women's restrooms in Cores 7 and 10 contain 8 water closets	Same as SSA layout	If more than 6 stalls in a restroom, one ambulatory stall must also be installed	\$ 675,000.00	Verify dimension of one of the stalls and retrofit to meet ambulatory stall requirements
ADA compliance - Elevator	Call buttons within the elevator may be too high for ADA compliance	Same as SSA layout	The centerpoint for the highest call button on an existing elevator must be within 54" AFF		If required, convert one elevator to be ADA compliant
Escalator		Same as SSA layout			
Stairwells: Photo-luminescent markings		Same as SSA layout			
Wall Finish & Repair	Plastic laminate wall finish is damaged and dirty	Same as SSA layout	Damaged surfaces do not meet the requirements for a professional office environment	\$ 484,410.00	- Further evaluate two wall repair options.
Carpet Replacement	Carpet tiles are peeling up and stained	Same as SSA layout	Flooring must be securely attached to substrate so it does not become a tripping hazard.	\$ 1,436,913.00	- Replace all carpet in the space. - Replace all VCT zones in the open office areas for consistent flooring finish
Ceiling Tile Replacement	Ceiling Tiles are dirty and in some locations falling out of the grid	Same as SSA layout	Damaged surfaces do not meet the requirements for a professional office environment	\$ 1,512,540.00	- Infill existing 4 foot x 5 foot grid with 1x4 and 2x4 ceiling components (see sketch in report)
Kitchen/Servery/Dining Area Interior Upgrades				\$ 581,742.00	
Horizontal Window sashes	Interior window sashes were bent or not working	Same as SSA layout	Replace sashes	\$ 310,800.00	
Life Safety					
Stairwells: Photo-luminescent markings			Existing stairways serving high-rise building do not have photo-luminescent markings.		Provide photo-luminescent markings in all exit stairways.
Fire command center room walls require investigation to determine fire-rated separation			Fire command center requires 1-hour fire resistance rated separation from adjacent areas per the building code.		Further investigation is needed to determine full extent of needed repairs to provide a fire rated enclosure for the FCC room.
Fire Suppression					
Sprinkler system replacement	Full automatic sprinkler protection required throughout.	N/A	Existing Circulating Closed-Loop Sprinkler System is unreliable and not fail-safe. System may not switch to Fire Mode in the event of a single sprinkler activation.	\$ 2,550,000.00	WRA recommends full replacement of the South Building sprinkler system to create a standalone sprinkler system separate from the CWR system.
Correct sprinkler system deficiencies		N/A	Implement recommendations of the Greenman-Pedersen report to mitigate areas of non-compliance.	\$ 90,000.00	Extend automatic sprinkler coverage to areas currently lacking sprinkler coverage. Verify all fire protection systems testing is up to date in accordance with NFPA 25.
Sprinkler system modifications		N/A	Modify sprinkler coverage in areas of renovation to meet NFPA 13.	\$ 38,850.00	Modify existing sprinkler layout to comply with NFPA 13 after installation of new interior partitions.
Standpipe system	Minimum residual pressure of 100 psi required at top of standpipe in accordance with Section 7.8 of NFPA 14.	N/A	Existing standpipe system does not provide 100 psi at top of standpipe. Pressure may be insufficient for interior firefighting.	\$ 120,000.00	-Existing fire protection systems must be modified to provide 100 psi at top of standpipe. This may require replacement of existing fire pump configuration. -Alternate: System designer may be able to demonstrate that existing configuration is sufficient when supplementary pressure is provided by fire department apparatus. Designer may apply for variance based on this condition. Variance must be approved by GSA AHJ and Baltimore City AHJ.
Fire Alarm					

Correct fire alarm deficiencies		N/A	Implement recommendations of the Greenman-Pedersen report to mitigate areas of non-compliance.	\$ 3,000.00	Provide new Digital Alarm Communicator Transmitter in accordance with Section 907.6.5 of the IBC.	
Fire alarm system modifications		N/A	Modify fire alarm notification coverage in areas of renovation to meet NFPA 72 and ADA.	\$ 31,500.00	Modify existing audible and visual notification appliance layout to comply with NFPA 72 after installation of new interior partitions.	
Mass Notification	Provide in accordance with Section 7.14 of PBS P100	N/A	Current facility voice-type fire alarm system complies with code requirements for visual and audible notification for mass notification system.	\$ 17,550.00	-Replace existing fire alarm notification appliance cover plates that currently read "FIRE" with new cover plates that read "ALERT" in accordance with Section 7.14 of PBS P100. -Reprogram digital voice content to address mass notification messaging.	
Mechanical						
Air conditioning	75 F	75 F	Current facility meets code, except for fire/smoke dampers at shaft wall penetrations and modifications to support new egress corridors	\$ 210,000.00	Modify to accommodate life safety requirements. Repair chiller serving OA system.	M-2,3
Ventilation	comply w/ ASHRAE 62 and IMC 2012	comply w/ 29 CFR	Current facility meets code for anticipated usage, but large meeting rooms not provided	\$ 7,500.00	Operate system and review performance. Perform IAQ testing. Deactivate humidification system.	M-6, M-10
Heating	70 F	70 F	Current facility meets code	\$ 26,250.00	Energize district steam system and validate proper operation. Add heat for new emergency corridors.	M--1,5
Building management System				\$ 7,500.00	Operate system and adjust occupancy schedule.	M-7
Special Purpose Spaces	75 F, Nine Rooms	75 F, Six Rooms	Provide cooling for new IT rooms and upgrade ventilation to new conference rooms.	\$ 255,000.00	Provide Dry Cooler System. Extend OA duct to Conference Rooms	M-4
Plumbing						
Toilet fixture count	Existing Facilities Adequate	Existing Facilities Adequate	Current facility meets code. While ADA Fixtures are provided, 25% standard is not met.			
Lavatory fixture count	Existing Facilities Adequate	Existing Facilities Adequate	Current facility meets code			
Domestic Hot Water	Existing Capacity Adequate	Existing Capacity Adequate	Upgrade system to provide 131 F distribution to restrooms with mixing valves to reduce temperature to 110 F at lavatories. Isolate unoccupied areas.	\$ 142,500.00	Provide approximately 25 thermostatic mixing valves to limit temperature at lavatory faucets and isolate North Building.	M-8
Drinking Fountains	Need 1 per 100 people	Need 1 per 100 people	Additional bottled water stations or drinking fountains required to meet code.	\$ 30,000.00	Provide bottled water stations (approx 20) for initial move in and eventually upgrade with plumbed drinking fountains.	M-9
Electrical						
Receptacles	Use existing under floor distribution system		Not enough receptacles	\$ 269,458.43		
Receptacles		Add power poles as necessary	Not enough receptacles	\$ 87,730.65	Provide power poles/receptacles	
Conference room Receptacles	Min. 1 receptacle per wall	Min. 1 receptacle per wall			Provide new receptacles as necessary	
Conference Room Lighting	Add new lighting	Add new lighting	New lighting with zone control switches	\$ 284,497.97	Provide new lights and local switches as necessary	
Emergency/ Exit lighting	Required in egress corridor	Required in egress corridor	Not enough emergency/exit lights	\$ 329,616.59	Provide and/or relocate emergency and exit lighting

Norm,

I don't think we ever met in person, but I was Rendell's deputy and am currently acting in the position he vacated. I have a couple of questions/requests for your related to our probable project:

- Last Friday OMB indicated that you had chatted with them and are trying to tighten the timeline for the Metro West renovations. When do you think you might have a handle on the ability to do that?
- Should we conduct another solicitation for currently vacant or soon to be vacant properties that are 100,000+ square feet in size?
- I also want to get on your radar the Bloomington, MN building. As you know, we vacated our intent to occupy that facility after much Congressional and public concern over the bus schedule. About 4-6 weeks ago, Rendell and I let GSA know that we would take the building after all. Our plan is to house some Management Directorate activities there. This building is critical to supporting the stand-up of the project. When I initially said I wanted the building I was given a 4-5 month estimate to have it occupant ready. When we gave the floor plans the original estimate came back as May/June; when I pushed back I got April. Is there anything you can do to speed up delivery of that building?
-

I really appreciate all of your assistance, I know these are big asks. I will be on the road most of the day with you team conducting site visits for our HQ, but I will be back later in the afternoon if you want to chat.

Gina, Tracy,

Attached is the A/E evaluation report for Metro West. Immediately below is the summary we provided to our Commissioner.

I will be in touch to set up a visit to Appraisers' Stores. Thank you for meeting with us on short notice today.

Subject: Metro West Evaluation

We had an A/E firm, Whitman Requardt and Associates (WRA) evaluate the condition of Metro West with respect to occupancy of the building by up to 1,500 CIS employees. We did discuss our methodology with CIS, including our assumptions. Our Regional Chief Architect assisted in summarizing the findings. We have a preliminary report, with a final due to us on Nov 3.

What we can conclude from the report is that the building is not ready for occupancy. WE anticipate that it would take up to one year to prepare the building, assuming all funds were available immediately. Following are the key items that need to be corrected before we could house CIS.

- 1) Due to known systems reliability issues, and the size of the requirement, the occupancy would be housed in the South Tower only. We also assumed 8x8 cubicles as the building floors could not handle any higher density.
- 2) There are \$2.5 million in repairs and replacements to the sprinkler system that must occur *prior to occupancy* based on consultation between our D&C and FMSP firesafety engineers (the Authority Having Jurisdiction). These include not only increasing the capacity of the system to accommodate a denser occupancy, but also replacement of the existing sprinkler distribution and sprinkler heads. We must also disconnect the system from the chilled water system regardless of the density of the occupancy. The total estimated cost of these items is \$2.5 million for the South Tower only. More importantly, this work will likely require approximately 9 months to complete.
- 3) There is no location in the building where a dense occupancy can be immediately housed without increasing HVAC, and electrical distribution. These and other code requirements must be corrected before we can occupy the space. The estimate for these repairs is about \$6.1 million. The work can be done concurrently with the sprinkler work.
- 4.) There are areas of the building with delaminated ceiling tiles, and open ceiling areas. The carpet is extremely worn. We would need to replace the ceiling and install carpet after the sprinkler work is completed. It will take two to three months to complete this work at an estimated cost of \$3.75 million.

At the time of the initial nationwide space request, we were asked about buildings that were immediately available. We have another building in downtown Baltimore that at the time of the request was not available, however, it will be available mid November. This building,

Appraisers' Stores, is a GSA operated building in excellent mechanical repair, although the space itself is dated and the footprint not as open. We believe that the building could house 600-900 people, depending on the customer's program of requirements and not-yet-identified improvements. We again would propose an A/E evaluation, preferably with more detailed requirements in hand. However, we are confident that the extent of any mechanical, electrical or fire safety improvements would be minimal compared to Metro West. We have not shown this building to CIS.

CIS has contacted us today for this information, but it wanted to convey this to your first. Please advise if you want me to convey this directly to CIS.

Thank you.

Executive Summary

Whitman, Requardt and Associates (WRA) was tasked by the General Services Administration (GSA) to provide a study to analyze the use of the existing Metro West Facility as temporary office space based on current local codes and life safety considerations. The study will be utilized as a reference as the Government determines the suitability of the Metro West Facility for use as an office space for 1,500 employees for 5 to 10 years. The office space is proposed to be located in the South Building of the Metro West Facility and will be operated by GSA. The Metro West Facility is located at 300 North Greene Street in Baltimore, Maryland.

The current facility was used as an office space until it was vacated in February 2013. The facility consists of a North Building with a fourteen story tower and a South Building. The two buildings are connected through the basement level and the 3rd and 4th floors and total 1,352,000 square feet of space. In addition to the office space, there was a day care facility located on the first level of the South Building, a cafeteria with full kitchen located at the third floor link between the North and South Buildings and two levels of parking and support facilities below the first level. The proposed usage of the South Building will not result in a change of occupancy. This report will identify significant code, functional, and system performance issues that need to be addressed prior to use by a new occupant allowing GSA to evaluate the costs and feasibility of upgrading the building.

Due to the immediate need for this office space, the government's goal is to get a code compliant space with acceptable system performance within a 90-120 day timeframe. WRA has identified code related issues and other work required to achieve an occupiable space. It is our recommendation to bring the space to full compliance prior to occupancy however, the government is the authority having jurisdiction (AHJ) and will make the final decision on the items that will need to be updated for the initial occupancy or implemented over the next few years.

Two scenarios were evaluated to provide space for the 1,500 proposed office occupants. Scenario 1 is to replicate the furniture layout of the previous occupants. This requires occupancy of the entire South Building, but will result in less renovation of the existing building infrastructure. Scenario 2 is to increase the utilization factor of the building footprint by maximizing the number of workstations per floor and minimizing the circulation while remaining consistent with current GSA standards. This approach requires more renovation of existing electrical and HVAC systems, but over a smaller footprint.

A summary of the code analysis and suggested upgrades is listed below. The IBC 2012 and the NFPA 101 Life Safety codes were the primary codes used to evaluate building code compliance.

Scenario 1: Reuse previous furniture layout:

Architectural

- A-1: Replace carpet, VCT, and transition strips throughout.
- A-2: Repair, refinish, or replace wall surfaces.
- A-3: Replace existing ceiling tiles with new.
- A-4: Resolve dead end corridors / egress issues at the second floor of Core 12.
- A-5: Confirm operability and code compliance of all hardware on egress path doors.
- A-6: Bring toilet rooms into compliance with ADA.
- A-7: Resolve need for elevator as an accessible means of egress.
- A-8: Provide photo-luminescent markings in stairs.

Life Safety

- LS-1: Investigate the wall assemblies and atrium glass storefront for the Emergency Command Center (ECC) room. Provide the necessary fire-rated construction upgrades where needed.

Fire Protection

- FP-1: Replace sprinkler system with new independent system not connected to the chilled water system
- FP-2: Modify existing sprinkler head layout for coverage after new interior partitions are built.
- FP-3: Extend sprinkler system to all areas not currently sprinklered.
- FP-4: Replace existing sprinkler heads with quick response sprinklers.
- FP-5: Verify the fire protection systems are being inspected and tested in accordance with NFPA 25.
- FP-6: Modify the fire pump system to provide 100 psi at the top standpipe hose valves to comply with NFPA 14.
- FP-7: Provide portable fire extinguishers throughout the proposed occupancy in accordance with NFPA 10.

Fire Alarm

- FA-1: Provide a new Digital Alarm Communicator Transmitter (DACT).
- FA-2: Modify existing audible and visual notification to comply with new partition layout.
- FA-3: Verify the fire alarm systems are being inspected and tested in accordance with NFPA 72.
- FA-4: Replace all fire alarm notification cover plates that are marked "FIRE" with new cover plates that are marked "ALERT" and update digital voice content to address mass notification messaging.
- FA-5: Test Child-Care Center fire alarm system for interface with Simplex system and provide system interconnection if none exists.

Mechanical

- M-1: Restart district steam service to support domestic hot water generation and building heating
- M-2: Repair chiller serving outside air desiccant system. Test and energize refrigerant leak detection system.
- M-3: Provide combination fire/smoke dampers and associated detectors for the exhaust and outside air risers where they penetrate the shafts to the occupied floors.
- M-4: Provide supplemental dry-cooler systems to serve new IT closets.
- M-5: Modify HVAC system to accommodate new rated egress corridor.
- M-6: Operate mechanical ventilation system in occupied mode for several days to flush out building, test automatic controls system, and make minor repairs as required. In addition, perform IAQ testing to document building air quality falls within an acceptable range.
- M-7: Reprogram automatic controls to de-energize equipment serving unoccupied areas where feasible.
- M-8: Set 131 degree Fahrenheit hot water distribution temperature to each toilet room group and add thermostatic mixing valves at each toilet room group to limit discharge temperature to 110 degrees Fahrenheit. Isolate North Building domestic water system from South Building system to limit stagnant water.
- M-9: Provide bottled water stations to supplement drinking fountains.
- M-10: De-activate existing direct injection steam humidifiers.

Electrical

- E-1: Relocate the existing emergency lights and provide additional emergency lights to provide average illumination of 1 FC (footcandle) along the paths of egress.
- E-2: Provide new exit lights (green LED) to mark the paths of egress
- E-3: Relocate and/or provide additional lights for the conference rooms. Provide local lighting control devices and receptacles in the conference rooms.
- E-4: Provide furniture whips from the existing underfloor ducts to the workstations.
- E-5: Provide additional power poles for the workstations receptacles and telecomm pathways as necessary.
- E-6: Revise the existing lighting control zones.

Scenario 2: Increase Occupant Density with an optimized furniture layout of 8 X 8 workstations.

- All Scenario 1 recommendations.

The cost for each recommendation is included in the analysis matrix.

Introduction

Whitman, Requardt and Associates (WRA) has been requested to perform a study to determine the suitability of the South Building of the Metro West Facility as office space for 1,500 federal employees. This will document and evaluate the South Building of the facility based on current local codes, life safety regulations and any repairs, rehabilitation or replacement required to provide suitable office space for federal employees.

There has been one recent study completed for this building which is:

- Fire Protection and Safety Management Survey of the Social Security Administration Metro West Building – March 26, 2013

The design criteria and recommendations from this report have been utilized for this study and considered in the analysis to maintain consistency. Additionally, the life safety and fire suppression planning recommendations made in this report are coordinated and rely on some of the findings in that study. Due to the number of people requiring office space, the South Building was proposed to be occupied while the North Building remains unoccupied.

The occupancy of the Metro West Facility office space is proposed in a timeframe of 90-120 days. This time will be used to correct code deficiencies, life safety concerns, and any repair or rehabilitation needed to provide an occupiable space with suitable HVAC, electrical, and plumbing infrastructure. If the code deficiencies are not corrected and existing systems not refurbished or replaced in the most cost effective manner consistent prior to period of occupancy, the GSA Regional Fire Protection Engineer will serve as the Authority Having Jurisdiction. The AHJ will determine the minimum life safety requirements for occupancy of this building.

Existing Building

The Metro West Facility is located at 300 North Greene Street in Baltimore, Maryland and was constructed in 1980. The facility consists of two buildings, a North Building and a South Building that are connected with a link on the third and fourth floors. The North Building includes a fourteen story tower with approximately 22,000 square feet per floor. The South Building is a five story building with approximately 110,000 square feet per floor. The link houses a cafeteria, seating area and connecting corridors between the two buildings.

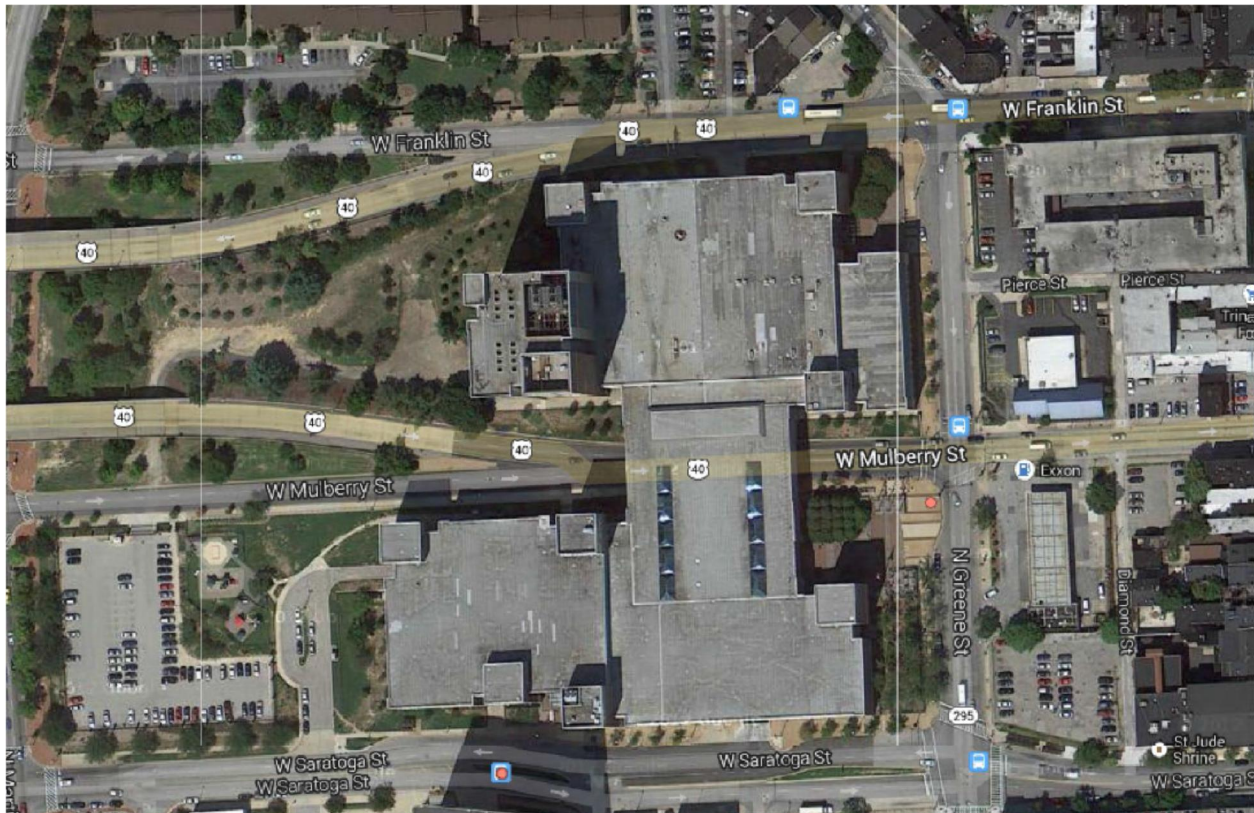

Figure 1: Aerial View of Metro West Facility – Courtesy: Google Earth

Combined the facility is approximately 1,352,000 square feet in area and consists primarily of office space with cafeteria, warehouse space, storage rooms, equipment rooms and loading dock. The building is divided into thirteen cores which incorporate bathrooms, HVAC duct shafts, elevators, escalators, equipment rooms, etc. Figure 2 identifies the core locations in the facility.

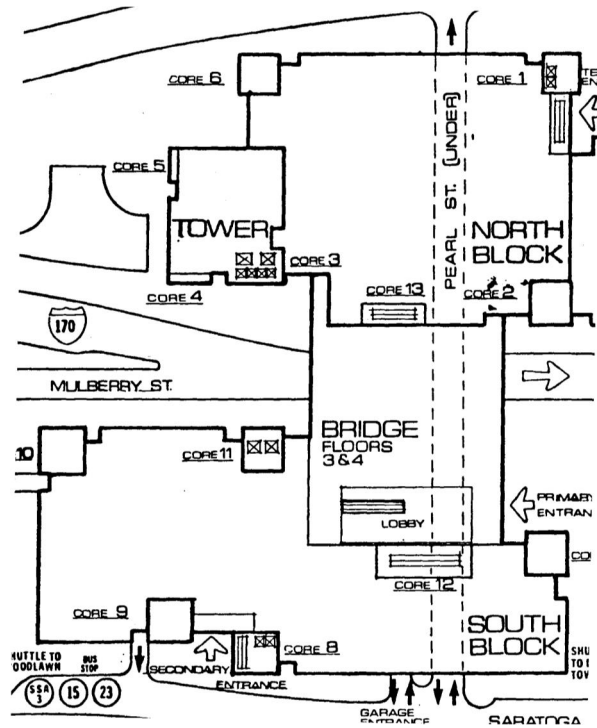

Figure 2: Metro West Core Locations

Architectural

General

Whitman, Requardt and Associates (WRA) visited the building for a brief visual survey of the existing conditions. The architectural survey was primarily focused on the overall condition of the interior space, the availability and condition of means of egress, and the minimum repairs necessary for immediate business occupancy. In addition, WRA reviewed the existing floor plans provided by GSA in order to calculate the areas of each space proposed to be utilized as well as to determine the size and capacity of the means of egress.

It should be noted that given the limited time available, it was not possible to review the drawings prior to the walkthrough, so the dimensions provided on the drawings are assumed to be accurate but have not been verified on site. It should also be noted that the walkthrough with GSA was limited to visual observation of the south building and cafeteria/kitchen area only.

Existing Conditions

Having recently been vacated, the building is still in fairly good condition. The building is steel framed with concrete and metal deck floors. The interiors primarily consist of suspended ceilings, gypsum board partitions (assumed to be over cold formed metal studs), and a combination of carpet tile and vinyl composition tile (VCT) flooring. Each floor is typically an open plan with circulation and services in a number of "cores" located around the perimeter of each floor. These cores typically contain egress stairs, toilet rooms, janitor's closets, mechanical shafts, and other building services such as electrical, telecom, or data closets. In the South Building there are two cores that also contain passenger elevators and escalators.

The walls are in fair condition and seem to consist of gypsum wall panels at higher traffic areas they are faced with a plastic laminate wall covering. The plastic laminate is in need of cleaning and has some edges that are chipped, delaminating and missing in some areas. The existing 5-foot by 5-foot acoustic panel ceilings grid appear to be in fair condition but the fabric facing on the majority of the panels is dirty and in some areas the panels have been replaced with faced fiberglass batt insulation. These replacement areas are sagging and in some cases are falling out of the ceiling grid. This 5-foot by 5-foot ceiling system is not a common ceiling system in current construction and may prove challenging to find replacement components. Floor finishes consists of carpet tile which is in poor condition and VCT with evidence of numerous repairs. There are a number of areas where carpet tiles are either missing or have edges that are curling up causing trip hazards. There are also areas of VCT that appear to have been coffee stations, and while no damaged tiles were noted in the areas visited, there are carpet-to-tile transition strips missing in areas. Under the finished flooring there appears to be a concrete topping slab over the structural slab and electrical duct system.

On the floors 2 thru 5 of the south building, interior gypsum partitions are generally limited to the cores and some perimeter rooms. At the second floor a large area on the west end of the floor is partitioned with walls that do not extend fully to the ceiling. It is assumed that partitions at the cores extend from the floor to the underside of the deck above. Any fire ratings of these existing partitions are not known at this time and should be verified to the extent possible. Interior partitions located away from the cores such as those used for copy / file rooms or private offices may or may not be constructed to the

deck above. If only constructed to the ceiling, these partitions might not meet code requirements for lateral load resistance. If they remain, there are code compliance issues with them including potential dead end corridors and doors that swing against the direction of egress travel that would need to be addressed. There are several large suites of rooms in the building that are not anticipated to be utilized at this time including an infirmary on the second floor and the daycare center and fitness center on the first floor. Egress paths and existing conditions were not reviewed in these areas. Should they be utilized, analysis of these areas needs to be done. There do not appear to be any issues with the fitness center on the first floor.

The cores include toilet rooms that appear to be in good condition with continued inspection while the building is unoccupied. The available plans indicate each toilet room has an ADA compliant toilet stall, though it should be noted that there has been no opportunity to survey all toilet rooms for the required ADA clearances, either with regard to ingress and egress clearances or to fixture locations and mounting heights. Access was not available to the toilet rooms on each floor but the one that was able to be observed during the survey indicates that the ADA components are slightly out of compliance and modification may be needed. Showers are provided only in the fitness center on the first floor, including one accessible shower each for men and women. Here as well, ADA required clearances in the shower rooms have not been checked.

Fire stairs are provided in each of the five cores on the perimeter of the South Building. Each fire stair has a vestibule leading into it to prevent passage of smoke into the stairwell. Not all stairs are the same width and so have varying capacity. See the attached diagrams for the South Building for capacities of each stair. Each stair provides access to an exit at grade (though grade is not located at the same story for all stairs) as well as access to the roof via mechanical penthouses. In some stairs access to the penthouse and roof are controlled by doors at the top occupied floor, while in other stairs there is no controlled access to the roof.

Codes and Standards

Applicable codes and standards that apply to this building include the following in addition to other codes and standards listed elsewhere in this report:

- The International Building Code (IBC) – 2012 Edition
- NFPA 101, The *Life Safety Code* – 2012 Edition
- 2010 ADA Standards for Accessible Design
- The General Services Administration Facilities Standards for the Public Building Service (PBS P100) – March 2014

Phase 1 –Scenario One: Utilization of the Existing SSA Layout

Space Programming

Scenario 1, as indicated in the scope of work, is to utilize the original SSA furniture layout to minimize impacts to the electrical and mechanical support systems in the building. Given the limited time for this report, exact locations of available in floor electrical connections could not be verified and the PDF furniture layouts provided by GSA were used to evaluate available workstation spaces. See the attached diagrams.

- Given the original configuration of the SSA layout, all five floors of the South Building would be needed to accommodate the 1,500 people programmed for this project. A total of 1,472 seats were tabulated from the original plans with an additional 57 spaces identified for infill within the original cubicle areas. See below for a breakdown of seats available per floor:

Floor	SSA Seat Count	Possible Infill	Total
First Floor	354	13	367
Second Floor	129	0	129
Third Floor	461	22	483
Fourth Floor	323	14	337
Fifth Floor	205	8	213
<i>Total</i>	<i>1472</i>	<i>57</i>	<i>1529</i>

- During the site walkthrough, additional electrical penetrations in the floor appeared available in the second, third, fourth, and fifth floors. These areas either showed file storage functions or no furniture on the plans provided. Exact locations were not determined in the limited time on site but these areas could be evaluated further if this option is pursued. It appears that the use of the first floor may be eliminated if adequate power is provided on the remaining floors.
- The sizes of the workstations provided in the SSA layout are approximately 8x6 or 8x8 which are within the requirements for standard workstations for GSA.
- Some floors contain individual enclosed office spaces; these have not been included in workstation counts.

In addition to the workspace analysis, GSA requested the following support spaces be addressed. It appears that these spaces may be accommodated with limited additional construction.

- Six existing telephone/data closets are provided on floors one through four and three closets are provided on the fifth floor. They are configured so that there is full coverage of a given floor without exceeding the maximum distance for the cabling runs.
- There are two existing 1,000 square foot data rooms, one on the second floor and one on the fourth floor. GSA requested a minimum 300 square foot data room, which either of these spaces can accommodate.
- GSA has requested three (3) classrooms for 25-35 people. On each floor there appears to be an existing enclosed areas that could support this function. Further discussion with GSA will determine which areas are preferred. The design team would then need to verify whether the walls extend to the ceiling for the selected areas if full enclosure is required.
- A 10,000 square-foot high density storage area is also included in the program with the request that it be located as close to ground level as possible. The record drawings indicated that the area adjacent, and to the west of the loading dock on the ground level (along Pearl Street) is a slab on ground, which most likely will be capable of supporting a uniform distributed load of 180 pounds per square foot of high density storage. However, the available record drawings do not have a sectional view of the slab on ground in question. The slab thickness and reinforcement, therefore, cannot be determined. Furthermore, in order to ascertain that the existing slab on ground is capable of supporting the high density storage, the subgrade modulus of the soil supporting the slab will need to be determined.

Code Analysis

See the next section of the report "Life Safety" for detailed code analysis discussion of the Occupancy Type, Construction Type, and egress features. Also see the attached diagrams for egress capacities at each fire stair and travel distances for egress. The following general items are noted:

- The calculated occupant load per NFPA 101 and the 2012 IBC is 1 person per 100 SF of gross floor area for Business Occupancy. The attached diagrams indicate the maximum calculated occupant load for each floor based on this aspect of the code, though the egress components as designed can handle a larger occupant load. The authority having jurisdiction shall ultimately determine the allowable occupant load. Also note that these allowable totals may exceed the occupant loads that the HVAC system can support.
- The third floor has a calculated occupant load of 1,999 persons, but only has egress capacity (as currently configured) for 1,241. There are some modifications that could be made to the stairs to bring capacity up to around 1,650 but that would still be 350 short of the necessary egress capacity.
- Per the Codes, a minimum of two accessible means of egress from each floor are required, and of those two, one accessible means of egress must be an elevator. It has not been determined whether the elevators as currently configured meet the code requirements to be used as an accessible means of egress.
- Elevator lobbies are not required if the building is sprinklered in accordance with specific code requirements, which have not been evaluated. Regardless of the presence of sprinklers, elevators serving floors over 75 feet above fire department access are required to be in lobbies. The fifth floor elevators appear to have lobbies, but surveys have not determined if they meet requirements, and they would not be required unless the floor level exceeds the 75-foot limit.
- Access to the elevators and stairs in Core 8 on the fifth floor is provided by way of an escalator lobby. It is not clear at this time that this is permissible per the Codes. Therefore, the stair is not counted in the available means of egress for the fifth floor (code requirements can still be met without it) and the accessible elevator noted elsewhere in this report must be located in Core 11.
- There are two sets of escalators in the south building. Neither is considered a means of egress for the purpose of this report as it is unclear whether the government intends to use them. Both are located in enclosed lobbies assumed at this point to be appropriately rated enclosures. NFPA 101 allows existing escalators that were previously approved as a means of egress to continue to be used as such under very limited conditions, though the gain in occupant load is severely limited. As such, it does not seem to be reasonable to count on them as means of egress at this time.
- There is an escalator lobby at Core 12 (clouded on the second floor code analysis plan) with a corridor running past it. There are a couple of code issues related to this area. The corridor has double doors at either end, separating the corridor from the office area, and separate doors from the corridor into the escalator lobby. The doors at the west end of the corridor create a dead end situation on the office side of the doors, unless they are useable from the office side to continue egress. However, if egress continues through these doors, the path must then either go into the escalator (believed to be the original intent) or into another corridor to the east and on to Stair 7-4. If egress is to bypass the escalator, the doors at the east end of the corridor must swing in the opposite direction.
 - If the escalators are intended to be used, it will be necessary to evaluate them for a means of egress, or else the following must be resolved: If the escalators are not going to be

returned to service, or are not an acceptable means of egress, then egress must continue freely past the escalator lobby. Assuming the lobby is appropriately rated, the recommendation would be to remove both sets of doors at both ends of the corridor outside the lobby so that no dead ends are created.

- The building appears to be generally compliant with the requirements of the ADA. The toilet rooms in all of the cores have a toilet stall which appears to be accessible, however a brief survey of one toilet room indicated that not all clearance tolerances are met. A list of non-compliant dimensions should be prepared and modification made to bring these toilet rooms into compliance. An option might be to convert the two smaller toilet rooms in cores 8 and 9 into dedicated accessible rooms rather than bringing all rooms into compliance. The time and cost savings would be dependent on the actual modifications necessary.
- The attached code analysis diagrams indicate several doors on the second floor that swing against the flow of egress. The swings on these doors should be reversed. One pair of doors specifically called out on the diagrams provide access between two spaces that each are required to have two exits based on the occupant loads in each space. As part of the means of egress from one, the door swing meets code, but from the other it does not. The simplest remedy, assuming a separation between rooms is no longer required would be to remove the doors and allow free passage in both directions. Stair 7-4 from the upper floors and Stair 7-2 from the garage levels converge at the first floor. Code requires the egress capacities for which the stairs are designed to be combined at this point. The combined egress capacity must be maintained from the point of convergence to the exit discharge, at the street in this case. Since the street is not at the first floor elevation in this location, the egress path from the point of convergence traverses another stair to the street level and exits via a double door. The allowable egress capacity of the stair and double door out to grade is less than the combined loads of 7-2 and 7-4 as required. In this case, the combined capacity of the Stairs 7-2 and 7-4 are limited to the capacity of the exit, and the allowable capacity of each stair cannot be easily determined. A similar condition exists at Core 11 where stairs from above and below converge, each with a capacity of 147, but the door to the exterior at the point of convergence only has a capacity of 160.
- Several of the egress stairs have a width of 7'-5" (89"). Code requires that there be a handrail within 30" of any portion of the stair used for egress. For these stairs wider than 60", there must either be a center handrail added to these stairs, or else the egress capacity must be reduced by the portion of the stair not within 30" of the existing handrails. In this case, the middle 29" would not be counted toward egress capacity - a loss of about 90 persons for each such stair. The stair capacities shown on the code analysis diagrams reflect the lower capacity since the extra handrails are not currently present.
- Because the building currently does not have barriers to personnel traffic and HVAC air flow between the south and north buildings on the third and fourth floors, the diagrams indicate some locations where it might be helpful to install partitions to block access to the north building. On the third floor, two of the north building stairs are necessary to be accessed for egress from the kitchen / server areas. Depending on the owner's intended use for the building, it should be noted that providing access to these stairs may allow access to other parts of the north building without other modifications.
- The code requires photo-luminescent markings in stairs that serve high rise buildings. This building is considered a high rise building and such requirements need to be reviewed for the extent to which they apply.

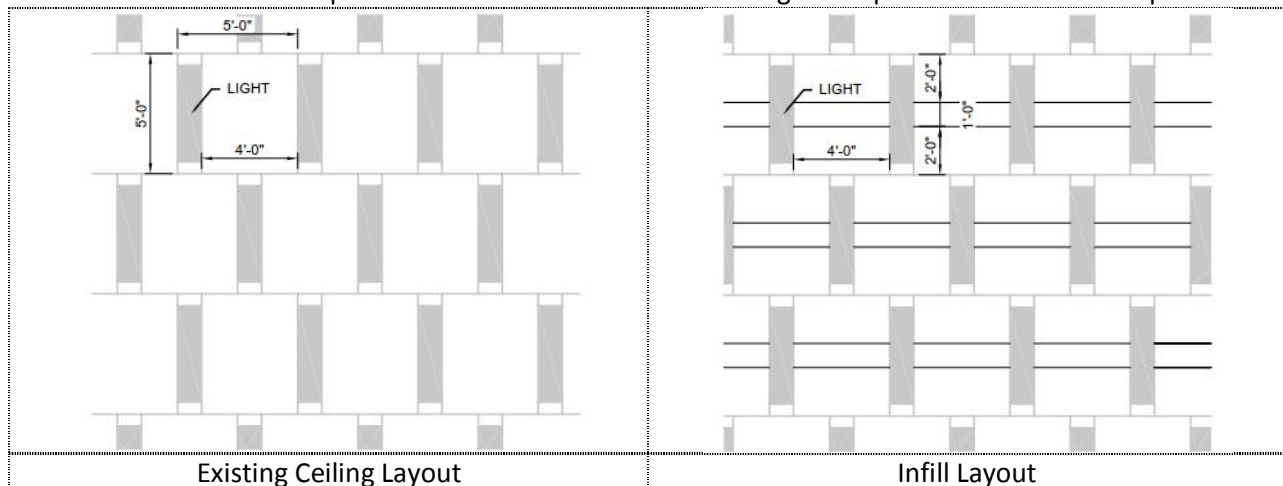

Interior Finishes

Given this scenario is to utilize the latest layout of the space, finish work would be limited to that required to provide a professional business atmosphere. GSA has directed that new carpet and paint be provided in the areas that they will inhabit. WR&A concurs with this direction as the condition of the carpet is rough and the walls are scuffed or damaged. WR&A recommends that areas with VCT outside of the building cores be removed and replaced with carpet for a consistent appearance throughout the open office area.

As noted previously, some of the walls are faced with a plastic laminate wall covering that is chipped and damaged in some areas. This damage is not easy to repair so WR&A proposes the following solutions:

- Replace panels that have multiple areas of damage and clean plastic laminate surface of panels to remain. Provide 1x prefinished wall strips at all wall panel seams to hide chipped wall edges.
- Cover all plastic laminate covered wall surfaces with ¼" thick gypsum wall panels, prepare seams and paint entire wall surface.

The existing ceiling as noted previously is in poor condition. The grid is typically 5-foot x 5-foot with a 1-foot x 4-foot linear light fixture. The panels are fabric covered and have collected years of dust and dirt which cannot be easily cleaned. WR&A recommends replacing the ceiling tiles with new. The grid is in fair condition but given its odd dimension, replacement panels may need to be custom cut. An alternative to custom cut panels would be to add intermediate grids to provide standard sized panels:

Existing Ceiling Layout

Infill Layout

Phase 1 –Scenario Two: Maximized Density Allowable

Space Programming

Scenario 2, as indicated in the scope of work, is to maximize the utilization of the existing floor plates to minimize the amount of area required to accommodate 1,500 people. To determine the amount of people allowable, the design team needed to determine the limiting factors for occupancy of each floor.

- The following limitations per floor have been determined:

Floor	Configuration (6x6 cubicle)	Occupant Load (B)	Egress Capacity	Plumbing Fixture Capacity	Mechanical System Capacity*
First Floor	n/a	971	n/a	2,200	471
Second Floor	n/a	880	1,044	2,200	594
Third Floor	748	802	894	2,200	594
Fourth Floor	852	802	894	2,200	594
Fifth Floor	n/a	445	694	1,050	337

* Mechanical capacity based on entire floor area including offices, conference/classrooms, telecommunication rooms, etc.

- Given these limitations, the mechanical capacity is the determining factor for the number of workstations able to be provided per floor in most cases. Using nominal 8x8 workstations, a total of 1,632 seats can be provided on floors two through five. See below for a breakdown of seats available per floor and the attached diagrams:

Floor	Seat Count
First Floor	n/a
Second Floor	354
Third Floor	483
Fourth Floor	522
Fifth Floor	273
<i>Total</i>	<i>1632</i>

- The sizes of the workstations provided are approximately 8x8 which are within the requirements for standard workstations for GSA.
- Some floors contain individual enclosed office spaces; these have not been included in workstation counts.

The additional support spaces required would be accommodated as shown in scenario 1 utilizing existing constructed spaces.

Code Analysis

The code allowed occupancy loads and the egress capacities of each portion of the means of egress from the building consistently exceed the actual occupant loads imposed either by furniture arrangements or HVAC capacities. Therefore, the code related issues and deficiencies are the same for this scenario as they were for the previous scenario. Refer to the code analysis above.

Interior Finishes

As noted in scenario 1, the existing wall, floor and ceiling finishes should be replaced and/or repaired. Given the reconfiguration of the workstations, additional work will need to be done to modify the existing topping slab and walker duct so that new electrical and communications connections can be accommodated in the floor. Full layouts and configurations of the existing floor power/data duct system have not been completed as part of this study to determine the extent of renovation required.

Recommendations

- Architectural #1 (A-1): Replace carpet, VCT, and transition strips on all floors to be occupied.
- Architectural #2 (A-2): Repair or replace existing plastic laminate faced wall panels to provide professional business environment.
- Architectural #3 (A-3): Replace all existing acoustic ceiling tiles with new mineral fiber panels and metal grids as described in this report.
- Architectural #4 (A-4): Determine whether escalators will be re-energized and resolve issues on the second floor at Core 12 as described above.
- Architectural #5 (A-5): Confirm operability, and code compliance of all hardware on egress path doors.
- Architectural #6 (A-6): Identify and remediate all ADA non-compliance issues in toilet rooms or completely renovate small toilet rooms to be purely ADA compliant.
- Architectural #7 (A-7): Confirm whether any of the existing elevators meet the requirements for an accessible means of egress and if not, bring one elevator into compliance.
- Architectural #8 (A-8): Add code required photo-luminescent markings in stairwells.

Life Safety

General

Whitman, Requardt and Associates (WRA) visited the Metro West Facility on October 8, 2014 for a brief survey of the existing conditions. However, the time available for survey is insufficient to fully verify the condition of the existing Metro West Facility with regard to the applicable codes. GSA recently contracted Greenman-Pedersen, Inc. to assess the Metro West Facility for any significant code deficiencies. The resulting report, dated March 26, 2013, is titled "Fire Protection and Safety Management Survey of the Social Security Administration Metro West Building."

The Greenman-Pedersen report provides a code analysis of the Metro West Facility as an existing Business Occupancy. Since the occupancy will remain unchanged, many of the findings will continue to be relevant. Therefore, WRA's analysis will reference the Greenman-Pedersen report to supplement findings from the October 8th survey. WRA recommends that the life safety and fire protection deficiencies identified in the Greenman-Pedersen report be mitigated in addition to building modifications proposed in this study.

Codes and Standards

The applicable codes and standards for the new shelter to be provided at the Social Security Administration Metro West Facility include, but are not limited to, the following:

- The International Building Code (IBC) – 2012 Edition
- NFPA 1, *Fire Code* – 2012 Edition
- NFPA 13, *Standard for the Installation of Sprinkler Systems* – 2013 Edition
- NFPA 20, *Standard for the Installation of Stationary Fire Pumps* – 2013 Edition
- NFPA 72, *National Fire Alarm and Signaling Code* – 2013 Edition
- NFPA 101, *The Life Safety Code* – 2012 Edition
- The Federal Emergency Management Agency Congregate Care Sheltering Statement of Work – June 2014
- The General Services Administration Facilities Standards for the Public Building Service (PBS P100) – March 2014

Code Analysis

The Greenman-Pedersen report documents the existing egress arrangement for the complete Metro West Facility and finds no significant concerns for the occupancies present during the Social Security Administration's tenancy. The WRA analysis will focus primarily on the Metro West - South Building (South Building) as this is the anticipated location of the proposed office occupancy. The report seeks to clarify the means of compliance with the applicable life safety codes and standards. However, the final requirements are subject to the approval of the Authority Having Jurisdiction (AHJ). The Metro West Building is operated by the GSA; as such, the AHJ will be the GSA Mid-Atlantic Regional Fire Protection Engineer.

Occupancy Type

The occupancy use group of the planned re-utilization of the Metro West Facility is defined primarily as Business Use. This is consistent with the previous occupancy classification for the building and as indicated in the Greenman-Pedersen report. The cafeteria seating area is classified as Assembly Group A-3, which is the previous use classification for the space. Much of the existing basement level accommodates a parking garage and is classified as Storage Group S-2 Use. The remaining support spaces are considered accessory use areas as defined by the building code due to their relative size compared with the predominant occupancies, and have no impact with the overall building classification. The proposed Classroom spaces on the office floors are defined as Business Use, where occupant loads are below 50 people, and are classified as Assembly Group A-3 where occupant loads are equal to or exceed 50 people. The mechanical and electrical rooms, including any new telecom closets are classified as Factory Use F-1 spaces. The proposed high-density storage space is classified as a Storage Group S-1.

Building Construction Type

Although the use classification of the Metro West Facility will remain the same, this study attempts to confirm whether the existing building meets Table 503 of the IBC. In addition to the Business Use classification anticipated on the First, Third, Fourth and Fifth Floors of the South Building, the building additionally includes non-accessory Assembly A-3 Use areas (Cafeteria and Conference Rms.) and Storage S-2 Use group areas.

WRA was unable to verify the existence and continuity of all fire resistive elements during the October 8th site visit; however, the Greenman-Pedersen report documents the following:

“The floors are constructed of reinforced concrete supported by structural steel with spray-applied fireproofing. The columns are constructed of structural steel encased in sheetrock and spray-applied fireproofing. The roof consists of built-up materials on a concrete slab that is over corrugated steel pan. The assembly is supported by structural steel encased in spray-applied fireproofing. The construction appears equivalent to a Type II (222) classification as defined by NFPA 220 and Type IB construction as defined by the IBC.”

For the A-3 and B occupancy groups listed above, Table 503 of the IBC permits the gross floor area of the building to be unlimited in buildings of Type IB construction. With respect to the Storage S-2 Occupancy, Table 503 limits the gross floor area of the building to 79,000 square feet. The 79,000 square foot limitation is permitted to be increased to 296,250 square feet if the building is accepted by the AHJ as “fully sprinklered” and allowable increases for street frontage are incorporated in accordance with Section 506 of the IBC. The area of the largest floor is approximately 217,783 square feet.

For all anticipated occupancy groups, Table 503 of the IBC limits the building height to 11 stories above grade. The maximum height is permitted to be increased to 12 stories if the building is accepted by the AHJ as “fully sprinklered.” The existing Metro West Facility includes a 14-story North Building Tower, exceeding the 12-story limitation. However, the proposed re-occupancy will be limited to the five-story South Building. The area of renovation will be maintained below the 12-story limitation.

High-Rise Building

The highest floor level of the Metro West Facility is greater than 75 feet above the lowest level of fire department access. As such, the building is classified as a high rise and must comply with Section 403 of the IBC. The building is provided with an existing automatic sprinkler system in accordance with Section 403.3 of the IBC and is provided with a standpipe system in accordance with Section 403.4.3. The building is provided with an existing voice-type fire alarm system in accordance with Section 403.4.2 of the IBC.

At this time, WRA is unable to verify the existence of emergency responder radio coverage required in accordance with Section 403.4.5. However, Section 11.8.4.2.1 of NFPA 101 permits the use of two-way telephone communication between the emergency command center, elevator cars, elevator lobbies, and each floor level of exit stairs. Existing telephones are provided in the locations identified above.

Section 403.4.7 requires high rise buildings to be equipped with natural or mechanical ventilation for the removal of products of combustion. Natural ventilation is currently provided via existing manually operable windows.

Section 403.6 of the IBC requires a fire service access elevator to be installed in high-rise buildings with an occupied floor more than 120 feet above the lowest level of fire department vehicle access. The North Building Tower is currently not occupied and the shelter is expected to be located in the South Building. The requirements included in Section 403.6 of the IBC must be re-evaluated if the North Building Tower is occupied in the future. However, the requirements of Section 403.6 of the IBC do not apply to the shelter design.

A fire command center is required in high-rise buildings in accordance with IBC, Section 403.4.5. The fire command center requires a 1-hour fire resistance separation from adjacent areas. The existing Emergency Command Center (ECC) located on the ground floor serves as the building's fire command center, however, the separation from the adjacent atrium space does not appear to be fire resistance rated. A survey above the suspended ceiling was not performed to verify the integrity of the other walls for this room.

Secondary power is currently supplied to life safety systems via an existing emergency generator in accordance with Section 403.4.9 of the IBC.

Atrium Construction

A four-story atrium is provided between the North and South Towers. The atrium is separated from the remainder of the building via fire resistive construction, and beam-type smoke detection is provided and monitored by the building fire alarm system. However, the four-story atrium is not provided with a dedicated smoke control system, as required by Section 404.5 of the IBC.

Building Egress

The means of egress for the South Building includes five enclosed stairs. Three of the five exit stairs discharge directly to the building exterior while the remaining two discharge through the basement

lobby. The Greenman-Pedersen report documents that all exit stairs serving the South Building comply with the minimum construction requirements of NFPA 101. All stair doors do not require more than one action to release, are self-closing, permit re-entry, and positively latch. Existing exit remoteness exceeds one-third the diagonal dimension of the floor area served.

The five exit stairs for the South building provide an exit capacity for 1,132 occupants. The maximum anticipated occupant load of the proposed office areas is not expected to exceed 900 occupants per floor with exception of the 3rd floor due to the cafeteria. Please refer to the attached egress diagrams and the previous section for further information on building egress.

Recommendations

- Life Safety #1 (LS-1): Investigate the wall assemblies and atrium glass storefront for the Emergency Command Center (ECC) room. Provide the necessary fire-rated construction upgrades where needed.

Fire Protection

General

Whitman, Requardt and Associates (WRA) visited the Metro West Building on October 8, 2014 for a brief survey of the existing conditions. However, the time available for survey is insufficient to fully verify the condition of the existing Metro West Facility with regard to the applicable codes and GSA guidelines. The GSA recently contracted Greenman-Pedersen, Inc. to assess the Metro West Facility for any significant code deficiencies. The resulting report, dated March 26, 2013, is titled "Fire Protection and Safety Management Survey of the Social Security Administration Metro West Building." In addition a recent study was performed by WRA on the utilization of the facility as a congregate care shelter for FEMA. The report, dated June 20, 2014, is titled "Temporary Facility Analysis for the Metro West Building". Both reports will be referenced in this study as there is pertinent code and system evaluation information in the referenced reports.

The Greenman-Pedersen report provides a code analysis of the Metro West Facility as an existing Business Occupancy. This classification is relevant to the re-utilization of the building for office space as proposed in this study. Therefore, WRA's analysis will reference the Greenman-Pedersen report to supplement findings from the October 8th survey. WRA recommends that the life safety and fire protection deficiencies identified in the Greenman-Pedersen report be mitigated in addition to building modifications proposed in this study.

Existing Conditions

The Metro West Facility is provided with full-automatic sprinkler protection throughout with the exception of select electrical equipment areas, including the transformer rooms. The 14th Floor Mechanical Equipment Room and the Basement parking garage levels are protected via a dry-pipe sprinkler system due to the potential for freezing. The remainder of the Metro West Facility is protected via a wet pipe sprinkler system.

The wet pipe system provided is defined in NFPA 13 as a Circulating Closed-Loop System, which uses the chilled water return (CWR) piping from the HVAC system as sprinkler risers, mains, and branch lines. Valves are provided throughout the building such that upon activation of a sprinkler, the CWR system is changed over to "fire mode" and water is supplied to the sprinkler system. As the system changes from CWR mode to fire mode, water is supplied to the system by a head tank located on the 14th Floor of the North Building.

The Metro West sprinkler system is fed by an existing 8-inch combined fire and domestic water service main that enters the building from Greene Street. Two electrically-driven fire pumps are installed to supplement the municipal water pressure. The first fire pump is manufactured by Peerless and rated for 1,000 gpm at 125 psi. This fire pump is the primary pump for the building's standpipe-sprinkler system and serves the majority of the building. The second fire pump is also manufactured by Peerless and rated for 750 gpm at 87 psi. This fire pump serves only the Child-Care and Fitness Center's wet sprinkler system and the basement dry sprinkler zones. The sprinkler system is designed to provide 0.15 gpm/sq.ft. over the hydraulically most remote 1,500 sq.ft., located in the upper penthouse. Pendant-type, standard response sprinklers are provided throughout the majority of the building, however, the Child-Care and Fitness Center has quick response type pendant sprinklers.

A Class I wet standpipe system is provided with 2-1/2-inch hose connections and 1-1/2-inch reducers in cabinets located in the vestibules or just outside vestibules at each stairway. The recorded static pressure at the top of the standpipe is 55 psi.

Wet chemical fire suppression systems are provided to protect cooking equipment in the cafeteria. The systems were last tested in May, 2012 and the cafeteria equipment is currently abandoned in place. Shelter operators initially intend to provide catered food that is prepared off-site. If the cafeteria is re-opened for on-site food preparation in the future, chemical fire suppression systems must be re-tested and accepted by the AHJ prior to use.

Portable extinguishers appear to have been removed in the majority of the office areas of the South building. Extinguisher cabinets were observed as being empty and brackets were without extinguishers in several locations.

Codes and Standards

The applicable codes and standards for the proposed office occupancy at the Metro West Building include, but are not limited to, the following:

- The International Building Code (IBC) – 2012 Edition
- NFPA 1, *Fire Code* – 2012 Edition
- NFPA 13, *Standard for the Installation of Sprinkler Systems* – 2013 Edition
- NFPA 20, *Standard for the Installation of Stationary Fire Pumps* – 2013 Edition
- NFPA 72, *National Fire Alarm and Signaling Code* – 2013 Edition
- NFPA 101, *The Life Safety Code* – 2012 Edition
- The General Services Administration Facilities Standards for the Public Building Service (PBS P100)– March 2014

Code Analysis

For the purposes of this report, this code analysis is not considered a comprehensive analysis of the compliance of the entire Metro West Facility fire protection systems. The Greenman-Pedersen report identifies several items related to fire protection systems that were out of compliance at the time of the March, 2013 report. This analysis is intended to identify new requirements that will take effect as a result of the proposed re-occupancy of the building in accordance with the IBC, NFPA 101 and GSA PBS100 standards.

- **Area of Sprinkler System Application**

Section 903.2.11.3 of the IBC requires full, automatic sprinkler protection throughout all buildings with a floor level having an occupant load of 30 or more that is located 55 feet or more above the lowest level of fire department vehicle access. The 5th floor of the south building is at an elevation higher than 55 feet above the level of fire department access. The Metro West Facility is currently provided with automatic sprinkler protection throughout nearly all spaces. However, select electrical utility rooms are currently without sprinkler protection. The building cannot currently be

considered “fully sprinklered” for the purposes of applying reductions in minimum code requirements.

- **Type of Sprinkler**

Section 903.3.2 of the IBC requires listed quick-response sprinklers to be installed throughout all light hazard occupancies. The existing sprinklers installed throughout the proposed space are standard-response, link-and-lever-type sprinklers. Section 8.3.3.1(3) and 8.3.3.1(4) of NFPA 13 permits standard response sprinklers in existing light hazard systems where modifications or sprinkler head replacement occurs.

- **Standpipe Pressure**

Section 7.8 of NFPA 14 *The Standard for Installation of Standpipe and Hose Systems* requires a “minimum residual pressure of 100 psi at the outlet of the hydraulically most remote 2-1/2-inch hose connection.” The existing standpipe system serving the Metro West Facility currently provides a static water pressure of 55 psi at the top of the standpipe, per the Greenman-Pedersen report.

- **Portable Extinguishers**

Section 906.1 of the IBC requires portable extinguishers throughout Group B buildings. It was observed that portable extinguishers were missing from the majority of the existing cabinets and wall brackets in the proposed office areas.

Recommendations

In accordance with the Code Analysis provided above, WRA recommends the following actions:

- Fire Protection #1 (FP-1): The existing Circulating Closed-Loop Sprinkler System serving the Metro West Building is not fail-safe as it requires positive action by isolation valves to operate in fire mode. While the applicable codes do not specifically prohibit the use of Circulating Closed-Loop Sprinkler Systems, GSA Mid-Atlantic Region Systems Administrator Anthony Rosato has identified concerns about the reliability Metro West Facility sprinkler system. Specifically, the building has previously experienced instances where a single sprinkler has been activated and/or damaged. Depending on the location of sprinkler activation within the building, water flow from a single sprinkler may not be sufficient to activate the sprinkler system flow switch and initiate system changeover to fire mode. The 770 gallon head tank on the 14th Floor of the North Building supplements the sprinkler system during the transition to fire mode. When water flow is not registered and the changeover to fire mode is not initiated, water from the head tank will flow freely into the room of sprinkler operation until a low-level sensor in the head tank is activated. WRA concurs with Section 4.2.9 of the Greenman-Pedersen report that the sprinkler system should be replaced if there is continued occupancy of the Metro West Facility. If occupancy is limited to the South Building, the GSA Fire Protection Engineer may permit the partial replacement of the wet-pipe sprinkler system serving the South Building only.
- Fire Protection #2 (FP-2): Modify the existing sprinkler layout to comply with NFPA 13 requirements for system coverage after new interior partitions have been constructed.

- Fire Protection #3 (FP-3): Extend automatic sprinkler system coverage to all areas that are currently not sprinklered.
- Fire Protection #4 (FP-4): Replace all standard-response, link-lever type sprinklers installed on floors to be occupied by the proposed office areas with quick-response sprinklers.
- Fire Protection #5 (FP-5): Documentation of required testing is out of date for the following systems: fire pumps, dry-pipe sprinkler systems, and standpipe systems. Verify that all fire protection systems are inspected and tested in accordance with NFPA 25 *Standard for the Inspection, Testing, and Maintenance of Water-Based Fire Protection Systems*, 2014 edition.
- Fire Protection #6 (FP-6): The standpipe system must be modified to deliver 100 psi at the top of the standpipe. The existing fire pump configuration must be replaced to meet the 100 psi minimum. Conversely, system designers may seek a variance to allow a lesser pressure at the top of the standpipe while maintaining the existing fire pump configuration, provided that supplementary pressure provided by fire department apparatus can be demonstrated to provide sufficient pressure at the top of the standpipe. This variance application must be approved by the AHJ for the City of Baltimore in addition to the GSA AHJ.
- Fire Protection #7 (FP-7): Provide portable fire extinguishers throughout the proposed office areas in the South Building in accordance with NFPA 10.

Fire Alarm

General

Whitman, Requardt and Associates (WRA) visited the Metro West Building on October 8, 2014 for a brief survey of the existing conditions. However, the time available for survey is insufficient to fully verify the condition of the existing Metro West Facility with regard to the applicable codes and GSA guidelines. The GSA recently contracted Greenman-Pedersen, Inc. to assess the Metro West Facility for any significant code deficiencies. The resulting report, dated March 26, 2013, is titled "Fire Protection and Safety Management Survey of the Social Security Administration Metro West Building."

The Greenman-Pedersen report provides a code analysis of the Metro West Facility as an existing Business Occupancy. However, many of the findings will continue to be relevant if the building is converted from the current office layout. Therefore, WRA's analysis will reference the Greenman-Pedersen report to supplement findings from the October 8th survey. WRA recommends that the life safety and fire protection deficiencies identified in the Greenman-Pedersen report be mitigated in addition to building modifications proposed in this study.

Existing Conditions

The Metro West Facility is provided with an existing fire alarm system with voice-type audible notification. The main fire alarm control panel (FACP) is a Simplex brand, 4100U model control panel located in the Emergency Control Center (ECC) on the ground floor level of the atrium. The main Simplex FACP monitors remote fire alarm control panels located throughout the building for status. Receipt of an alarm signal at the main Simplex FACP currently initiates simultaneous evacuation of all floors in both the North and South Buildings. Signaling line circuits and notification appliance circuits are Class A as defined by NFPA 72. Secondary power is provided via batteries and connection to the emergency generator. The elevators are provided with Phase I emergency recall features and Phase II emergency operation features. The Metro West Facility fire alarm system is not currently monitored by an off-site, UL-listed central station.

The ECC additionally contains a secondary Notifier brand FACP that currently monitors fire alarm equipment in the former Child-Care Center. The GSA building engineer indicated during our October 8th survey the Notifier system panel is not interfaced with the main Simplex FACP. Alarm and trouble signaling for the Notifier system is not transmitted to the main FACP and general evacuation signaling within the Child-Care Center is not activated when the Simplex system goes into alarm.

Spot-type smoke detectors are currently provided in elevator lobbies, elevator machine rooms, elevator shafts, the former child development center, the main switchgear room, the UPS room, the battery equipment room, the fitness center, in vertical conveyor rooms, in equipment rooms with fire alarm control panels, adjacent to automatically-closing doors, and near each escalator opening. Duct-type smoke detectors are provided on the supply and return side of HVAC systems. Beam detectors are provided in the atrium and main switchgear room. The atrium is not provided with a smoke-evacuation system.

The GSA typically defines the "useful life" of a building fire alarm system to be 25 years. The site survey performed on October 8th was insufficient for WRA to confirm that all control equipment associated

with the fire alarm system serving the South Tower is less than 25 years in age. However, the main Simplex FACP located in the ECC appears to have been installed in the 2000's and was most recently tested in August of 2012. The Greenman-Pedersen report indicates that there are currently no problems with system audibility.

Codes and Standards

The applicable codes and standards for the proposed office occupancy at the Metro West Building include, but are not limited to, the following:

- The International Building Code (IBC) – 2012 Edition
- NFPA 1, *Fire Code* – 2012 Edition
- NFPA 13, *Standard for the Installation of Sprinkler Systems* – 2013 Edition
- NFPA 20, *Standard for the Installation of Stationary Fire Pumps* – 2013 Edition
- NFPA 72, *National Fire Alarm and Signaling Code* – 2013 Edition
- NFPA 101, *The Life Safety Code* – 2012 Edition
- The General Services Administration Facilities Standards for the Public Building Service (PBS P100) – March 2014

Code Analysis

While deficiencies were noted in our October 8th survey, the fire alarm system appeared to be operational and generally conforming with nationally recognized design standards and codes. For the purposes of this report, this code analysis is not considered a comprehensive analysis of the compliance of the entire Metro West Facility fire alarm system. The Greenman-Pedersen report indicates that the facility fire alarm system is largely in compliance for the occupancies present in March of 2013, and the proposed re-occupancy should not impact this assessment due to the same use of the building.

- **System Monitoring**

Section 907.6.5 of the IBC states that fire alarm systems required by the IBC must be monitored by an approved supervising station provided in accordance with NFPA 72. The Greenman-Pedersen report indicates that the Metro West building does not currently automatically transmit system status, including alarm signals, to an approved central station or the fire department. The ECC does not comply with requirements for a proprietary, on-site supervising station.

- **Mass Notification**

Section 7.14 of the PBS P100 requires a mass notification system designed in accordance with NFPA 72 to be installed in GSA-occupied buildings. The existing Metro West fire alarm system provides the emergency voice message capabilities required by the PBS P100. However, Section 7.14 states that "visible notification appliances must be the same type as used for fire alarm system visible notification appliances; however, they must not be identified by the word "FIRE." The existing visual notification appliances provided in the Metro West Facility are identified by the word "FIRE." Additionally, the digital voice messaging will need to be updated to provide mass notification emergency messaging. Emergency voice messaging content shall meet GSA specifications.

- **Child-Care System Interface**

During our October 8th survey, the GSA building engineer noted the Child-Care Center's Notifier fire alarm system is not interfaced with the main Simplex FACP. Section 907.5 of the IBC requires that a fire alarm system shall initiate occupant notification upon activation. The fire alarm systems require an interconnection to transmit alarm signals for monitoring and to activate occupant notification for general evacuation signaling.

Recommendations

In accordance with the Code Analysis provided above, WRA recommends the following actions:

- Fire Alarm #1 (FA-1): Provide all equipment and system programming necessary to install a new Digital Alarm Communicator Transmitter (DACT) in the ECC. The new DACT must have two dedicated land-line phone connections to transmit fire alarm system status to a UL-listed, off-site central monitoring service.
- Fire Alarm #2 (FA-2): Modify the existing audible and visible notification appliance layout to comply with NFPA 72 requirements for system coverage after new interior partitions have been constructed.
- Fire Protection #3 (FA-3): Documentation of required testing is out of date for the fire alarm systems. Verify that the fire alarm systems are inspected and tested in accordance with NFPA 72.
- Fire Alarm #4 (FA-4): Replace all fire alarm notification cover plates that are marked "FIRE" with new cover plates that are marked "ALERT" and update digital voice content to address mass notification messaging.
- Fire Alarm #5 (FA-5): Test the Notifier fire alarm system to verify interconnection with the Simplex FACP. Provide the necessary interface between systems where it's confirmed none exists.

Mechanical

General

The existing mechanical infrastructure was installed in 1979 and is aging, but well maintained. Although the building has been unoccupied for about a year, systems should be operational with minimal maintenance according to maintenance staff. The existing systems were designed for office usage and will have adequate heating, cooling, and ventilation for a typical office usage. From a HVAC perspective, ventilation will be the limiting factor for total occupancy. There are adequate numbers of water closets and lavatories for the initial proposed occupancy of 1,500 administrative staff, but bottled water stations or new drinking fountains will be required to meet current code requirements.

The mechanical recommendations discussed below will apply to both Scenario 1 and Scenario 2 and are recommended to correct code deficiencies and remedy significant performance issues.

Existing Conditions

Heating and cooling for the building is provided through district chilled water and steam systems. The main portions of the building are conditioned by ceiling mounted fan coil units provided with outside ventilation air through dedicated outside air handling units with desiccant dehumidification systems. Special use spaces such as the main lobby, existing child care center, dining area, and other portions of the link between the north and south buildings are served by dedicated air handling units that operate independently.

Central Plant

Cooling for the building is provided through a district chilled water system. The GSA currently has a contract for 500 tons of chilled water supply, but the system has capacity for up to 1500 tons of chilled water. In addition, there is a separate pumping system and connections for temporary chillers if the district chilled water system is not available. The district chilled water is pumped through two plate and frame heat exchangers to transfer cooling to the independent building chilled water system. Building chilled water is distributed to fan coils and air handling units throughout both the north and south towers.

Heating and domestic hot water generation for the building is provided through the district steam system. Incoming steam is passed through a pressure reducing station and distributed to steam to water heat exchangers and desiccant system react coils. Four steam to water heat exchangers are used to generate domestic hot water and additional heat exchangers are used to generate heating water that is distributed to exterior fan coils and air handling units throughout the building. Steam is distributed directly to the outside air desiccant dehumidification system react coils used to prevent excessive humidity in the building. In addition, there are direct steam injection tubes used to humidify outside air during the winter.

The steam system has been de-energized due to the building's current unoccupied status, but it is operational and can be re-energized.

Outside Air Ventilation

The south tower is served by a dedicated 35,236 cfm outside air system that incorporates a desiccant wheel, cooling coils with associated chiller, a heating water preheat coil, and a steam react coil for the desiccant wheel. The existing chiller is known to have a refrigerant leak and the associated refrigerant monitor has been disconnected to prevent nuisance alarms. The outside air system is not safe to operate without repair.

The north tower is served by a dedicated 41,381 cfm outside air system that utilizes a Kathabar liquid desiccant system. This system is operational, but requires high maintenance. It is limited to serving the north tower that is not currently considered for occupancy.

The drawings show duct risers running down shafts from the outside air units to distribution ductwork on each floor. Exhaust ductwork from toilet rooms and the return air plenum runs up the shafts to exhaust fans. Fire dampers are shown at shaft wall penetrations for the outside air ductwork and associated exhaust ductwork, but current codes require combination fire/smoke dampers for this application.

Special Purpose Spaces

There are four central air handling units that provide conditioning to the link portion of the building connecting the north and south towers. The units also provide conditioning to the lobby, day care center, and dining areas. The units are variable air volume with independent outside air intakes. The units supply terminal boxes that modulate supply air to each space as required to maintain space temperature set points. The building is equipped with typical toilet room exhaust fans and a garage ventilation system. These systems are operational.

There is a large existing dining hall and associated kitchen and cafeteria. The food service equipment and furniture was removed when the building was decommissioned. Meals would need to be catered unless the kitchen is renovated.

Fan Coils

The existing office spaces in the south and north towers are conditioned with fan coils mounted above the ceiling. The units circulate air through a plenum return and are typically equipped with six inch diameter outside air duct connections. Exterior units and units mounted on the top floor have heating and chilled water coils. Units on the interior have only chilled water coils. Supply air is supplied to the open office areas through continuous linear slot diffusers integrated with the acoustical ceiling tiles.

Record drawing information for system design capacities is limited, but the fan coil sensible capacity is sufficient to support about one cfm/square foot of conditioned supply air to the occupied spaces. This will be adequate for cooling and heating typical dormitory and office spaces.

Controls

The building has a digital automatic temperature control system. The maintenance staff indicated that the system is operational overall, but that some testing and validation in occupied mode will be required to ensure controls are operating properly due to the system age.

Plumbing System

The plumbing system consists of domestic cold and hot water risers, instantaneous domestic hot water steam to water converters, small hot water storage tanks, and a hot water recirculation system. Each domestic hot water generator is capable of producing 15 gpm of 120 degree Fahrenheit water, for a total capacity of 60 gpm.

Four bathroom groups are located on the second through fourth floors of the South Building. The first floor has additional locker rooms serving the old fitness center, which have shower facilities, water closets, and lavatories. The fifth floor of the South Building has fewer toilets due to its smaller footprint. In addition to the group toilets, additional toilets are located in the child care center, but this area is not planned for use as part of this renovation.

Please see the "Existing Plumbing Fixture Count" table on the next page for the number of existing fixtures. Each toilet room has one accessible water closet and accessible lavatories. One accessible shower is provided in each locker room as well.

The adequacy of the existing plumbing system is discussed in the code analysis section below.

Existing Plumbing Fixture Counts – South Building						
Toilet Room Location	Projected Usage	Water Closets	Urinals	Lavatories	Drinking Fountains	Notes
1st Floor						
Locker Rooms	Male	2	1	2		
Locker Rooms	Female	3		4		
Core 7	Male	3	2	2		
Core 7	Female	8		5		
Core 8	Female	5		4		
Core 9	Male	2	1	2		
Core 10	Male	3	2	2		
Core 10	Female	8		5		
Core 11	Male	3	2	2	1	
Core 11	Female	5		4		
1st Total	Male	13	8	10	1	
1st Total	Female	29		22		
Maximum Occupancy (IPC)		1710		1110	100	Max # meeting both gender's requirement
2nd – 4th Floor	(Typical Each Floor)					
Core 7	Male	3	2	2		
Core 7	Female	8		5		
Core 8	Female	5		4		
Core 9	Male	2	1	2		
Core 10	Male	3	2	2	1	
Core 10	Female	8		5		

Core 11	Male	3	2	2		
Core 11	Female	5		4		
2-4th Total	Male	11	7	8		
2-4th Total	Female	26		18		
Maximum Occupancy (Per Flr) (IPC)		1530		870	100	Max # meeting both gender's requirement
5th Floor						
Core 8	Female	5		4		
Core 9	Male	2	2	2		
Core 10	Male	3	2	2		
Core 10	Female	8		5		
5th Total	Male	5	2	4	1	
5th Total	Female	13		9		
Maximum Occupancy (Per Flr) (IPC)		630		390	100	Max # meeting both gender's requirement
Maximum South Building Occupancy		6,930		4,110	500	Max # meeting both gender's requirement

Codes and Standards

- 2012 National Standard Plumbing Code
- 2012 ICC International Mechanical Code
- 2010 ASHRAE 90.1 Energy Standard for Buildings Except Low-Rise Residential Buildings
- 2010 ASHRAE 62.1 Ventilation for Indoor Air Quality

Recommendations

Two scenarios are under consideration. In Scenario 1, the South Building will be reoccupied based on the previous furniture plan layout. In Scenario 2, workstation density will be maximized in order to limit required space. In Scenario 2, workstation density will be limited from an HVAC and plumbing perspective by the ventilation air available to the open office area. The key considerations for the building are ensuring adequate ventilation, heating and cooling, and plumbing fixtures for the initial projected occupancy of 1,500 administrative office staff. The primary requirements are increased drinking fountain facilities, HVAC and plumbing zone modifications to isolate the unused North Building and support code required egress corridors, HVAC modifications to support new conference and meeting space, and additional combination fire/smoke dampers at shaft walls.

The recommendations for HVAC and plumbing system upgrades apply to both Scenario 1 and 2. However, Scenario 1 recommendations will apply to the entire South Building while Scenario 2 recommendations will only apply to the portions of the South Building on floors 2 through 5 occupied by the new tenant.

Central Heating and Cooling Plant

There are no code issues with the central plant infrastructure. However, the steam system must be energized and confirmed to be operational prior to occupancy to ensure domestic hot water, building heating, and outside air dehumidification is available.

The preliminary block load indicated that 500 tons of district cooling will be required to support occupancy of the South Building. This assumes that cooling in unoccupied areas is disabled and that the chiller used to condition outside air ventilation is repaired and used to satisfy that additional load.

Outside air Ventilation

The primary occupancy for the south building will be administrative office. The 2012 International Mechanical Code ventilation rate for these occupancies is 0.06 cfm per square foot plus 5 cfm per person of outside air. The preliminary code analysis below is based on primary usage of the space as office space. The open plan area in the south building is not designed for concentrated occupancy, so the higher ventilation required for large meetings is not generally available. Small classrooms can be supported by minor modifications to outside air distribution ductwork that would redirect additional outside air to those spaces. A single 25 person conference room on each floor could readily be supported in that manner. Additional conference rooms on each floor would likely require provision of supplemental outside air drawn from new louvers in the wall and conditioned with fan coils.

Design data for the original building indicated that 0.1 cfm/sqft of ventilation air is provided to all open office spaces. This level of ventilation will support a density of 125 square feet per person in an office occupancy. Based on the approximate square footage of each floor's open office area, the maximum occupancy for each floor will be:

First Floor: 471 People
Second Floor: 594 People
Third Floor: 594 People

Fourth Floor:	594 People
Fifth Floor:	337 People
Total:	2,590 People

Special Purpose Spaces

The existing dining hall and kitchen are not expected to change usage. They were used as a dining hall and kitchen previously and will continue to be used for the same occupancy. The AHUs and exhaust fans serving the space should be tested to verify proper operation prior to occupancy. The child care center will be not be occupied as part of this renovation. No significant code issues are expected related to these spaces and the other lobby and circulation spaces served by the four building air handling units.

Additional telecom closets will be added as required to support the new office occupancy. A drycooler system will be located on the roof and glycol piping will be extended to dedicated self-contained fan coil units serving those closets. The current estimate is based on two additional closets per floor and two ton nominal capacity fan coil units.

Existing Fan Coils

While the fan coils have adequate capacity to condition typical office occupancies, they are configured to serve a large open office area. Modifications will be required if conference rooms are added in new locations or thermal zones need to be modified. Specifically, fan coils will have to be reconfigured to ensure return air can return to the fan coil plenum without being blocked by full height walls. Duct penetrations of shaft walls will need to be protected with combination fire/smoke dampers and associated smoke detectors. The egress path from the Dining Hall passing through the North Building will not be air conditioned and ductwork leading into that space will be capped to create a rated enclosure. Small electric cabinet heaters will be added on the perimeter where heating load calculations indicate freeze protection is required.

The original design drawings indicate that the fan coils provide 1 cfm/sqft for internal cooling loads throughout the open office areas with a sensible cooling capacity for internal loads of 13.3 btuh/sqft. Additional air flow is provided for perimeter space where envelope heating and cooling loads are seen. An analysis of the heat gain from a typical workstation shows that maximum workstation density is 75 sqft per person without exceeding the HVAC systems cooling capacity based on a single computer and monitor per workstation. This far exceeds the 125 sqft/person ventilation capacity, so cooling capacity is not a limiting factor for office density.

Controls

There are no code concerns with the building temperature control system. The FCUs are controlled locally through pneumatic thermostats in the return air grilles. The central DDC system controls the central plant and major AHUs. DDC temperature sensors have been located on each floor to enable the DDC system to monitor space temperature, but widespread monitoring of temperature over the entire floor plate is not provided.

Plumbing System

The total number of water closets and lavatories is adequate for the initial projected occupancy of 1,500 administrative staff. However, there will not be enough drinking water facilities. As noted in the recommendations below, Bottled water stations or new drinking fountains would be required to meet code requirements.

The code analysis is based on the 2012 National Standard Plumbing code and a 50 percent split between male and female occupants. Based on the code analysis, the proposed occupancy of 1,500 administrative office workers located in the South Building would have adequate water closets and lavatories regardless of whether Scenario 1 or 2 is selected. The overall South Building can support 4,110 people if additional drinking fountains or bottled water stations are provided.

While the building has accessible fixtures in each toilet room, they do not comply with current ADA standards from a dimensional standpoint and would require upgrades or a waiver.

The existing domestic water system will be adequate to support the proposed occupancy because occupancy will be significantly below the previous number of occupants. As noted in the recommendations below, the government should consider isolating the North Building domestic water system from the South Building domestic water system to avoid potential bacterial cross contamination from stagnant water in the unoccupied North Building.

In addition, current best design is to provide thermostatic mixing valves at each toilet room to minimize domestic hot water piping with water less than 131 degrees Fahrenheit. With this approach, the main circulation loop will be maintained above 131 degrees Fahrenheit while the mixing valves at each toilet room reduce the hot water temperature to 120 degrees Fahrenheit at the faucet.

Recommendations

Central Heating and Cooling Plant:

- Mechanical #1 (M-1): The district steam system should be re-energized and proper operation verified. The district steam system will be required to provide domestic hot water, building heating, and de-humidification of outside air. Domestic hot water is required by code for building occupancy.

Outside air Ventilation:

- Mechanical #2 (M-2): The refrigerant leak in the chiller serving the south tower refrigerant system should be repaired and the associated refrigerant monitoring system reactivated. The system is required to dehumidify outside air and prevent excessive humidity in the space. Historically, fan coil condensate pans have overflowed onto the ceiling tiles when the dehumidification system is not operational. In addition, peak cooling loads during the summer will significantly exceed the 500 tons of contracted district chilled water if the outside air chiller is not operational.

- Mechanical #3 (M-3): Combination fire/smoke dampers should be installed in the outside air and exhaust ductwork where they penetrate shaft walls on occupied floors. The International Building Code requires fire/smoke dampers in shaft wall penetrations connecting more than two stories. The existing drawings only show fire dampers in the duct penetrations of the shaft walls. This condition was not field verified, so confirmation of the existing condition is required. This is a fairly new code requirement, and many existing buildings do not comply. However, a change in building usage triggers a requirement to upgrade building systems to meet current codes unless a waiver is obtained.

Special Purpose Spaces:

- Mechanical #4 (M-4): Provide supplemental fan coils for new IT telecom closets on each floor. The expectation is that nine new closets will be required, each with a new 2 ton fan coil unit supported by one of two new dry-coolers on the roof. In addition, outside air ductwork will be slightly modified to extend more ventilation air into each of four classroom spaces. The ventilation air is essentially neutral to the space, so this will not impact the ability of the existing fan coils to properly condition the space.

Fan Coils:

- Mechanical #5 (M-5): An additional rated corridor will be installed for egress from the Dining Hall through the North Building as required to prevent a dead-end corridor. The HVAC system will require modifications to match the corridor layout. The ductwork system will be capped to avoid penetrations into the egress corridor. In addition, small electric cabinet heaters will be provided as required for freeze protection on exterior exposures. This egress corridor is not intended for day to day use, so it will not be air conditioned.

Controls:

The building operations staff indicated that the existing digital control system is operational, but that a number of minor repairs will likely be required during the restart of building systems.

- Mechanical #6 (M-6): Start-up existing HVAC systems and verify proper controls system operation to confirm proper system operation. Operate system in occupied mode for several days to a week to flush the building with fresh air. Perform IAQ test on each floor of the South Building to verify air quality is acceptable for new occupants.
- Mechanical #7 (M-7): Modify programming to limit HVAC system occupied mode operation to the occupied portions of the south tower and ensure operating schedule matches tenant requirements. Fan coils in unoccupied portions of the building can remain in unoccupied mode, but the central control system will need to be reprogrammed for that sequence of operation. Due to the hydronic piping configuration and sprinkler system, the entire building chilled water system and heating water system will need to be operational, but energy savings can be achieved by not operating fan coils. This recommendation is not a requirement for occupancy, but would reduce energy consumption.

Plumbing System:

The existing plumbing system is generally adequate for the proposed usage because the occupancy is not changing from the previous usage. Minor changes related to domestic hot water supply temperature, additional drinking water, and the deactivation of the steam humidification system are recommended to prevent operational problems and improve code compliance.

- Mechanical #8 (M-8): Adjust domestic hot water discharge set point to 131 F and provide thermostatic mixing valve at each toilet room group to prevent scalding and minimize potential for bacterial growth. Isolate the North Building Domestic water systems from the South Building systems to prevent cross contamination.
- Mechanical #9 (M-9): Provide bottled water stations throughout the office areas to ensure adequate supplies of drinking water.
- Mechanical #10 (M-10): The existing direct steam injection humidifiers for the outside air should be deactivated since chemicals in the steam are not suitable for indoor air quality.

Electrical

General

The existing electrical system is distributed from multiple stacked electrical closets on each floor. Each electrical closet accommodates 480/277 volt, 3 phase, 4 wire panels, 480-208/120 volt step down dry type transformers and 208/120 volt, 3 phase, 4 wire panels. The existing receptacle branch circuit wires are routed through the wire troughs and wire management system below 208/120 volt panels to the existing underfloor duct system. There are also supplemental UPS panel/circuits are provided in the electrical closets.

The existing 1120 kW, 480/277 volt, 3 phase, 4 wire emergency generator was installed in 2005 and a 8,000 gallon diesel fuel tank are dedicated to support the life safety loads for both north and south buildings. The existing fuel tank will provide minimum of 72 hours of emergency power for the life safety loads including the emergency/ exit lights, elevators and fire pumps.

Existing Conditions

The existing lighting system consists of recessed 1'x4' parabolic louver fluorescent lighting fixtures with T-8 lamps. The existing lighting fixtures are connected to the existing 277 volt lighting circuits. The existing lights are controlled by Metasys building management system and there are no local lighting switches on the floor. The emergency lights are provided throughout the space although the existing emergency lighting level was not adequate.

The existing power is provided by the existing furniture whips (4 circuit 8 wire system) include 4 phase conductors, 2 neutral conductors and 2 ground conductors provided from 208/120 volt panels via the existing underfloor ducts (wire management system).

There are multiple electrical closets with 480/277 volt panels and 208/120 volt panels on each floor.

There are no receptacles installed on the existing perimeter walls.

Codes and Standards

NFPA 70 National Electrical Code (NEC) Handbook, 2011 Edition

NFPA 70E Standard for Electrical Safety in the Workplace, 2012 Edition

NFPA 101: Life Safety Code, 2012 edition

(IEEE) Institute of Electrical and Electronics Engineers - All related Documents

IES Illuminating Engineering Society of North America -Related Documents

Phase 1 – Scenario One

The existing power is provided by the existing furniture whips (4 circuit 8 wire system) include 4 phase conductors, 2 neutral conductors and 2 ground conductors provided from 208/120 volt panels via the existing underfloor ducts (wire management system).

There are multiple electrical closets with 480/277 volt panels and 208/120 volt panels on each floor.

There are no receptacles installed on the existing perimeter walls.

Phase 1 – Scenario Two

The existing lighting fixtures shall be relocated to provide P100 and IES recommended lighting level for the optimized furniture plans and conference rooms. The existing lighting control zones shall be field verified and coordinated with the optimized furniture plans.

The existing lighting fixtures shall be relocated and/or additional lighting fixtures may require for the conference rooms with local re are no local light switches. New receptacles and telecomm outlets shall be provided in new conference room partition walls.

The existing emergency lighting fixtures shall be relocated and/or additional emergency lights shall be provided along the paths of egress and illumination levels shall be field verified to meet the life safety code requirements. New exit lights shall be provided to mark the paths of egress.

The existing furniture whip and locations of the furniture whip junction boxes shall be coordinated with the optimized furniture plans. Additional power poles shall be provided if the existing furniture whip junction boxes and available circuits are not adequate for the optimized furniture plans.

Recommendations

- Electrical #1 (E-1): Relocate the existing emergency lights and provide additional emergency lights to provide average illumination of 1 FC (footcandle) along the paths of egress.
- Electrical #2 (E-2): Provide new exit lights (green LED) to mark the paths of egress.
- Electrical #3 (E-3): Relocate and/or provide additional lights for the conference rooms. Provide local lighting control devices and receptacles in the conference rooms.
- Electrical #4 (E-4): Provide furniture whips from the existing underfloor ducts to the workstations.
- Electrical #5 (E-5): Provide additional power poles for the workstations receptacles and telecomm pathways as necessary.
- Electrical #6 (E-6): Revise the existing lighting control zones.

Cost Estimate

The rough order of magnitude cost estimate is provided within the analysis matrix based on each code or task upgrade. The costs are based on a subcontractor cost that includes overhead and profit. The general contractor cost was provided through a 25% mark-up to reflect bond, general conditions, tax and overhead and profit

Appendix A

Appendix B

EXISTING CONDITIONS ASSESSMENT - DRAFT

Project: Metro West Bldg. Survey Date: October 8, 2014
Project No: HFS 2448 Issue Date:
Issued By: Richard Hopkins Location: 300 N. Greene St.,
Baltimore, MD

Overview

We inspected the facility at 300 N. Greene St., Baltimore, MD on October 8, 2014 to evaluate the conditions of the existing servery and kitchen for reuse/refurbishment by a potential new tenant. The facility was last known to be in operation March 2014.

The building features a large open atrium dining area with a split servery design. The overall condition of the dining area is good. The overall condition of the servery is fair.

The bulk of the food service equipment has been removed. The remaining equipment are A) Serving counters, which are in fair condition and B) Exhaust hoods, which are in good condition. The built-in equipment in the counters, although fair to good condition, is considered to be serviceable. Some vendor provided equipment (beverage dispensers, bottle coolers, and detergent systems) should be replaced as a part of a new vendor contract. Storage and refrigerated rooms are also in fair to good condition. Depending on the length of the tenant lease, it may be appropriate to replace the walk in door panels as the doors are heavily damaged.

Option A - Catered Food

The repairs and equipment replacement for the servery would be a moderate cost estimated at \$185,000 to provide a full breakfast and lunch menu in the right-side (furthest from the building core) servery. For the projected 1500 person population, it is not recommended that the left-side servery area be brought back online for either catered meal service or on site prep Option B. Kitchen equipment to support Option A would include warming cabinets, worktables and hand sinks. Some rolling stock would likely be the property of the caterer. It is recommended that for both Options A and B that food service be provided using single service compostable service ware. The existing dishroom/potwash room would be largely converted into a non-food storage room for disposables. The potwash sink and drying areas would retain their functions.

Option B - On Site Food Preparation

Equipment upgrades for the servery in Option A also apply to Option B. Catering rolling stock provided by the caterer in Option A would be required to be purchased by the government. As all the cooking and preparation equipment has been removed, it is also necessary to purchase new equipment to support the reduced population of 1500 persons. The cost estimate of \$375,000 for Option B takes this into account. The existing utility hookups allow flexibility to match up a sufficient cooking battery to support operations. In some cases, additional infill (tables, carts) would be necessary as the line upon equipment would be scattered across the existing cooking batteries.

In addition to the new equipment costs, there needs to be a contingency for the cost of commercial cleaning and authorized service inspection and any needed repairs, which we assume to be minor as the operation last ran in March 2014. Equipment costs do not include any related utility installation or hookups.

We recommend some aesthetic upgrades be included to encourage participation. Suggestions include the addition of a coffee bar with espresso/cappuccino machine, recladding of the buffet counter's vertical surfaces (over existing ceramic tile) and new wall coverings throughout.

Appendix C

Analysis Code Matrix - Metro West South Building					
	SSA Layout	Optimized Layout	Requirement	ROM Cost (\$)	Recommendation
Architectural					
Occupancy	All five floors would need to be occupied with the existing SSA furniture layout with the information available at this point.	Floors 2 through 5 can accommodate the program space requirements but will involve additional work to infrastructure.	Program Space needs include fitting 1500 people, 10,000SF storage, 3 classrooms and supporting Data/Comms Rooms	\$ 11,250,000.00	Further discussion needed on which scenario will meet all the needs including cost and timeline.
ADA compliance - Restrooms	Required mounting height for accessories and fixtures per Chapter 6	Same as SSA layout	Existing fixtures and accessories in ADA designated restrooms are just out of compliance.	\$ 540,000.00	Modify other existing restrooms to meet the current requirements of ADA.
ADA compliance - Restrooms	Women's restrooms in Cores 7 and 10 contain 8 water closets	Same as SSA layout	If more than 6 stalls in a restroom, one ambulatory stall must also be installed	\$ 675,000.00	Verify dimension of one of the stalls and retrofit to meet ambulatory stall requirements
ADA compliance - Elevator	Call buttons within the elevator may be too high for ADA compliance	Same as SSA layout	The centerpoint for the highest call button on an existing elevator must be within 54" AFF		If required, convert one elevator to be ADA compliant
Escalator		Same as SSA layout			
Stairwells: Photo-luminescent markings		Same as SSA layout			
Wall Finish & Repair	Plastic laminate wall finish is damaged and dirty	Same as SSA layout	Damaged surfaces do not meet the requirements for a professional office environment	\$ 484,410.00	- Further evaluate two wall repair options.
Carpet Replacement	Carpet tiles are peeling up and stained	Same as SSA layout	Flooring must be securely attached to substrate so it does not become a tripping hazard.	\$ 1,436,913.00	- Replace all carpet in the space. - Replace all VCT zones in the open office areas for consistent flooring finish
Ceiling Tile Replacement	Ceiling Tiles are dirty and in some locations falling out of the grid	Same as SSA layout	Damaged surfaces do not meet the requirements for a professional office environment	\$ 1,512,540.00	- Infill existing 4 foot x 5 foot grid with 1x4 and 2x4 ceiling components (see sketch in report)
Kitchen/Servery/Dining Area Interior Upgrades				\$ 581,742.00	
Horizontal Window sashes	Interior window sashes were bent or not working	Same as SSA layout	Replace sashes	\$ 310,800.00	
Life Safety					
Stairwells: Photo-luminescent markings			Existing stairways serving high-rise building do not have photo-luminescent markings.		Provide photo-luminescent markings in all exit stairways.
Fire command center room walls require investigation to determine fire-rated separation			Fire command center requires 1-hour fire resistance rated separation from adjacent areas per the building code.		Further investigation is needed to determine full extent of needed repairs to provide a fire rated enclosure for the FCC room.
Fire Suppression					
Sprinkler system replacement	Full automatic sprinkler protection required throughout.	N/A	Existing Circulating Closed-Loop Sprinkler System is unreliable and not fail-safe. System may not switch to Fire Mode in the event of a single sprinkler activation.	\$ 2,550,000.00	WRA recommends full replacement of the South Building sprinkler system to create a standalone sprinkler system separate from the CWR system.
Correct sprinkler system deficiencies		N/A	Implement recommendations of the Greenman-Pedersen report to mitigate areas of non-compliance.	\$ 90,000.00	Extend automatic sprinkler coverage to areas currently lacking sprinkler coverage. Verify all fire protection systems testing is up to date in accordance with NFPA 25.
Sprinkler system modifications		N/A	Modify sprinkler coverage in areas of renovation to meet NFPA 13.	\$ 38,850.00	Modify existing sprinkler layout to comply with NFPA 13 after installation of new interior partitions.
Standpipe system	Minimum residual pressure of 100 psi required at top of standpipe in accordance with Section 7.8 of NFPA 14.	N/A	Existing standpipe system does not provide 100 psi at top of standpipe. Pressure may be insufficient for interior firefighting.	\$ 120,000.00	-Existing fire protection systems must be modified to provide 100 psi at top of standpipe. This may require replacement of existing fire pump configuration. -Alternate: System designer may be able to demonstrate that existing configuration is sufficient when supplementary pressure is provided by fire department apparatus. Designer may apply for variance based on this condition. Variance must be approved by GSA AHJ and Baltimore City AHJ.
Fire Alarm					

Correct fire alarm deficiencies		N/A	Implement recommendations of the Greenman-Pedersen report to mitigate areas of non-compliance.	\$ 3,000.00	Provide new Digital Alarm Communicator Transmitter in accordance with Section 907.6.5 of the IBC.	
Fire alarm system modifications		N/A	Modify fire alarm notification coverage in areas of renovation to meet NFPA 72 and ADA.	\$ 31,500.00	Modify existing audible and visual notification appliance layout to comply with NFPA 72 after installation of new interior partitions.	
Mass Notification	Provide in accordance with Section 7.14 of PBS P100	N/A	Current facility voice-type fire alarm system complies with code requirements for visual and audible notification for mass notification system.	\$ 17,550.00	-Replace existing fire alarm notification appliance cover plates that currently read "FIRE" with new cover plates that read "ALERT" in accordance with Section 7.14 of PBS P100. -Reprogram digital voice content to address mass notification messaging.	
Mechanical						
Air conditioning	75 F	75 F	Current facility meets code, except for fire/smoke dampers at shaft wall penetrations and modifications to support new egress corridors	\$ 210,000.00	Modify to accommodate life safety requirements. Repair chiller serving OA system.	M-2,3
Ventilation	comply w/ ASHRAE 62 and IMC 2012	comply w/ 29 CFR	Current facility meets code for anticipated usage, but large meeting rooms not provided	\$ 7,500.00	Operate system and review performance. Perform IAQ testing. Deactivate humidification system.	M-6, M-10
Heating	70 F	70 F	Current facility meets code	\$ 26,250.00	Energize district steam system and validate proper operation. Add heat for new emergency corridors.	M--1,5
Building management System				\$ 7,500.00	Operate system and adjust occupancy schedule.	M-7
Special Purpose Spaces	75 F, Nine Rooms	75 F, Six Rooms	Provide cooling for new IT rooms and upgrade ventilation to new conference rooms.	\$ 255,000.00	Provide Dry Cooler System. Extend OA duct to Conference Rooms	M-4
Plumbing						
Toilet fixture count	Existing Facilities Adequate	Existing Facilities Adequate	Current facility meets code. While ADA Fixtures are provided, 25% standard is not met.			
Lavatory fixture count	Existing Facilities Adequate	Existing Facilities Adequate	Current facility meets code			
Domestic Hot Water	Existing Capacity Adequate	Existing Capacity Adequate	Upgrade system to provide 131 F distribution to restrooms with mixing valves to reduce temperature to 110 F at lavatories. Isolate unoccupied areas.	\$ 142,500.00	Provide approximately 25 thermostatic mixing valves to limit temperature at lavatory faucets and isolate North Building.	M-8
Drinking Fountains	Need 1 per 100 people	Need 1 per 100 people	Additional bottled water stations or drinking fountains required to meet code.	\$ 30,000.00	Provide bottled water stations (approx 20) for initial move in and eventually upgrade with plumbed drinking fountains.	M-9
Electrical						
Receptacles	Use existing under floor distribution system		Not enough receptacles	\$ 269,458.43		
Receptacles		Add power poles as necessary	Not enough receptacles	\$ 87,730.65	Provide power poles/receptacles	
Conference room Receptacles	Min. 1 receptacle per wall	Min. 1 receptacle per wall			Provide new receptacles as necessary	
Conference Room Lighting	Add new lighting	Add new lighting	New lighting with zone control switches	\$ 284,497.97	Provide new lights and local switches as necessary	
Emergency/ Exit lighting	Required in egress corridor	Required in egress corridor	Not enough emergency/exit lights	\$ 329,616.59	Provide and/or relocate emergency and exit lighting

Below is what we have in the space standards for Service Centers concerning multiple floors.

Building Design

The program area and adjacency descriptions on the next pages show general layouts for this facility type. It will be up to the Offeror to decide upon what design works best for the specific location and usage. A one-story building solution is preferred; although layouts for one-story and two-story scenarios and for a multi-building and single building scena

PROS

Cafeteria & local eating establishments
Ample free parking
Suburban area
Direct loading dock access

Mass transit within walking distance
FPS on-site offices
Located in Van Nuys government civic center
Stand alone building
Attached enclosed parking

Good public transit
Many amenities within walking distance

50,000 USF

\$1,750,000 **Refresh only**

\$7,500,000 **Full TIs**

CONS

limited public transit (bus walking distance; train 4 miles)
Abatement work - tiles and fireproofing (can leave in place)
High cost of living

IRS located on first floor if that is a conflict for said agency

Limited structured parking

Special Requirements

Introduction

Building Design

The program area and adjacency descriptions on the next pages show general layouts for this facility type. It will be up to the Offeror to decide upon what design works best for the specific location and usage. A one-story building solution is preferred; although layouts for one-story and two-story scenarios and for a multi-building and single building scenario are shown in the conceptual block plans later in this document. A building of more than one-story may be acceptable provided that the employee entry, security and records remain on the first floor, and the remainder of the building provides proper access for employees and accommodates the rare visitor at this facility type. In the event that the building is two or more stories; and due to the large size of these facility types, the restrooms will need to be broken into separate spaces to support the various Divisions.

The separation of the public and employee space is not as important an aspect of this facility type as some of the other types due to the fact that Service Centers rarely receive public visitors. All visitors shall enter through a single, well defined, secure entrance. The entrance sequence will include a public entry that provides for protection from the weather while waiting for the security screening. Additional Employee Only entrances will be provided as required.

Throughout the facility (the interior only) USCIS will use standard signage and images that portray the USCIS brand; this guidelines are also included in this document. Due to the size of these facilities, directional/wayfinding signage should be incorporated into the design. There is a standard color palette for the interior finishes for the USCIS space as included in the agency standards that are found later in this document. The following diagrams and narratives will outline the requirements of each of the major components. The exterior of the facility should have little to no exterior signage due to the fact that this is not a customer facing facility.

Leadership / Director Area

The Service Center Director is the individual who is responsible for overseeing the operations of the entire USCIS Service Center which consists of all the operations and employees involved in processing thousands of immigration applications each year. The Director will use this space not only to manage the operation but also to receive and meet with official visitors. Visitors include USCIS officials, community leaders, national politicians, lawyers and others doing business with the Service Center. This office should occupy a prominent area within the facility, near the facility entrance, and shall be collocated with Mission Support.

Official visitors will arrive at the Director's reception area via public circulation pathway. This space shall be located within the open office portion of the Director's office and have a means of visual and oral communications between the office space and the waiting area to allow visitors to be greeted and announce their presence.

The layout of the Director's space shall revolve around the open office space. The Director's office will be directly adjacent to the Director's conference room. All employees within this space shall have access to the main employee circulation pathway without having contact with the public circulation zones.

Counsel

The Counsel office provides legal advice to this office. This office should be in close proximity to the Service Center Director's office. This area requires private offices for the attorney's as well as open office area for support staff and a separate file room for the storage of counsel files.

Operational Areas

Adjudications (Immigrations Services Officer)

The Adjudications area is the location of the bulk of the Service Center staff; the Immigration Services Officers (ISOs). The Adjudication staff are broken into divisions, and each division varies in size due to the specific function / application type they process.

The Adjudicators are located in the open office area adjacent to the Associate Center Directors and Section Chiefs. The Adjudicators are responsible for processing the applications received at the Service Center for individuals seeking United States citizenship as well as making adjustments to an immigrant's current status. The design of this area should reflect the importance of the process and provide a space that is comfortable for the employees. Unlike other facility types there are no interviews conducted at the Service Center; therefore no customers are present. The preferred design solution would have all Adjudications Divisions collocated on a single floor.

This operational area shall also include a large multi-purpose conference room. This room can be divided into three rooms for large division or team meetings and training. The Multipurpose room shall be one large area that shall be used as a large meeting and training area for the facility staff. The seating for this space shall be movable and be able to be stored in a space immediately adjacent to this room. When configured as smaller rooms, said rooms shall be of appropriate proportions to be used for conference space or training space. Multiple uses may occur at the same time within the larger space and the HVAC system should be designed to accommodate these requirements. More information on the Audio Visual Standards can be found in the A/V Standards Guide.

Records Division

The Records Division is where all files and records regarding applicants are maintained. This area should be located adjacent to the loading dock to allow for the mail to easily come in and out of the area. Immediately inside the loading dock should be the X-ray area for scanning of all mail. Immediately adjacent to the x-ray area should be the presort area; or "slit & peek" area where contracts open and view the mail in order to sort and process it. This area must be designed to expedite the transportation, distribution, and storage of files for both internal use and external shipping. There is a requirement for a large amount of file space all of which must be secured. These files are for all ongoing immigration cases at this office and will need to be transported between the storage area and the rest of the facility. File transfers between the records area and the other departments typically involves the use of wheeled carts. This will necessitate secure, durable, and well defined circulation zones (horizontal and vertical) that allow for the passage of carts and personnel. The file room itself shall be constructed with slab to deck walls and not located on an exterior wall or near any plumbing systems. Walls must be true slab to slab construction. Both walls and ceilings are to be made out of durable materials that provide resistance to and evidence of unauthorized entry into the space. The file room will consist of four separate areas: Secure files, Information, Grants and Adjustment of Status. The secured file area will need to be a separate secured room within the greater file room. The other three areas will be delineated within the overall filing area by the layout of the file shelving. Adjacent to the file room will be the open office area for the Records Clerks and offices for the Supervisors.

USCIS utilizes a nationwide central filing system and, as such, files are received and shipped on a daily basis. This will require a file staging area for packing and unpacking boxes that is adjacent to both the loading dock and the file room. The loading dock doesn't necessarily require a full warehouse type setup with seals and dock levelers, but there must be a convenient and secure way for files and forms to be transferred to and from a variety of vehicles in all types of weather.

The records area consists of the records supervisor/manager office space, open office area for the records staff who will be located in workstations and the undelivered document/POUNDS Room as well as a copy area.

Data Entry/File Clerks

The Data Entry and File Clerk area of the Service Center is made up completely of open office area for many file clerks and data entry staff who process the files and payments received with each application for citizenship. The only enclosed office portion of this area is the Secure Deposit Room where clerks process the checks and money orders that sent with all applications this needs to be an enclosed and lockable room.

Operational Support

The A-File area for this area is for ongoing cases being adjudicated. These files are kept in a central location within the building but only accessed by Records Division and Data Entry / File Clerks.

The mail room is a significant open area for the Service Center facility type. This consists of several sections that make up the total mail receiving/sorting/processing functions. This area also requires an x-ray machine vestibule in order to scan all the mail that is coming in to the facility. A room for incoming mail separate from outgoing mail is required in this facility. There are also requirements for three separate secure rooms for the storage of A-files, general bulk storage and supply room. There is also a requirement for a HUB room for the organization of the files as they are staged to move throughout the Service Center facility.

Fraud Detection and National Security (FDNS)

The FDNS suite area consists of a few important rooms that support this function which is responsible for the discovery of any individuals applying for citizenship who might be involved with fraud or are a threat to national security.

The FDNS Office conducts ongoing review of applications to ensure that fraud is uncovered and that national security is protected. Much of the work done in this area is of a secure and sensitive nature. This unit is self-contained and can be separate from other areas of the building. The only public component to this area will be the collaboration room.

The FDNS suite is an open office environment and is not in a separate suite within the facility. Within the open office area there will be space for the FDNS officers and filing. There will be a collaboration room that shall have an entrance off of the circulation zone.

This area requires a supervisory office, an open office area for the remainder of the staff, a closed collaboration room, a secure file room and a HSDN/Talon Room which has a separate set of security requirements that must be included in the fit out and design of that space.

Security (OSI)

The requirements for this area are a supervisory office, an open office area for the remainder of the staff members and an area where the credentials and PIV equipment can be stored and used to create badges for employees.

Office of Information Technology (OIT)

Due to the large volume of employees at each Service Center there is a large amount of varied spaces needed for the OIT area. The OIT area requires an office for the supervisory position, and an adjacent open office area for the remainder of the staff. There is also an area required for the OIT staff to set-up new computers for Service Center employees. This area needs shelving and a work area in order to perform this work.

An additional area is needed for the telework training area. This area will be an open office environment with a work surface for the set-up and training of the telework employees.

Building Joint Use / Support Spaces

Throughout the facility there will be spaces that are shared. These spaces include the lobby, conference rooms(s) and computer training room, employee restrooms, and the large break room. These spaces will utilize a variety of materials and layouts. The spaces will be spread throughout the facility as required; due to the large size of these facilities and the number of employees there is a need to distribute these joint spaces.

Public entry into the lobby requires a weather vestibule to protect visitors. For the Service Centers that support telework, there may need to be a second employee entrance for the teleworkers. Once in the building there needs to be ample room for the security screening area.

The public restrooms should be located adjacent to lobby space. Employee restrooms should be in a central location of the facility with easy access by all employees. In a multi-storied building each floor shall have at least one set of employee restrooms. These spaces will all need to be on dedicated HVAC zone(s) and shall have the proper exhaust rate as required by local code.

There is a preference for the bulk storage to be located on the first floor of the building and in close proximity to the loading dock. There should be one set of double doors into this room to allow for large deliveries including pallets.

The Break Room is a key element to building support. Due to the large size of the Service Centers and the high volumes of employees there is a need for several break rooms to be distributed throughout the facility. There shall be two break rooms that are each $\frac{1}{4}$ of the total size allocated total, and one break room that is $\frac{1}{2}$ the size of the allocated total.

There are several different needs for storage that the Service Center facility type needs. They do not all need to be collocated or adjacent, but some are best located near the loading dock area for easier movement. Bulk storage both for excess materials and for secure storage should be located near the loading dock as well as near the supply room. The supply room should be near the loading dock and near the bulk storage to be easily accessible from the loading dock and in a location that most of the facility can easily distribute the needed supplies for the Service Center.

There is a requirement for a Union Office in the Service Center. This office should be located at a distance from the most populated areas of the Service Center to insure some privacy for those using the office.

A computer training room is required for the Service Center, and the room should be located in an area that is accessible to most of the staff. This room should be permanently set-up as a computer training room so that there is appropriate furniture, IT and electrical drops in the room to accommodate the number of stations.

There is also a requirement for restrooms for both male and female employees as well as immediately adjoining shower facilities. Immediately adjacent to the women's restrooms should be a lactation room for use by female employees.

There are several areas/rooms that need be located in the facility for the use of IT/LAN/Security use. There are further details for these rooms included in the IT requirements.

General Notes

- a. In the event a conflict exists between the Solicitation for Offers and the U. S. Citizenship and Immigration Services (USCIS) Special Requirements, the USCIS Special Requirements shall prevail.
- b. Building Entrances – Where ever possible there should be two entrance types to USCIS space, one for employees and one for all visitors. The employee entrance should enter into the employee work area and will be controlled by a door equipped with door closer, electric strike and proximity card reader. The quantity of employee entrances will be determined by the Project Management Branch, USCIS, and Federal Protective Services.
- c. Direct/Indirect Light Fixtures – shall be equipped with T8 or Super T8 lamps with electronic ballast providing 30 foot candles (unless otherwise noted) of light at work surface height (30" AFF). The lessor shall maintain the fixtures and replace lamps as necessary. Lamp color shall be maintained at 3500K and the CRI (Color Rendition Index) must be maintained at a minimum of 80 for the term of the lease unless an alternate light color is approved by the USCIS Field Support Center. Where fluorescent direct / indirect fixtures are not indicated in this document (i.e. Bulk Storage, etc. other fixtures appropriate for that specific condition should be used). **The Lessor shall ensure that the cost of the shell specified lighting in the Solicitation for Offers needs to be subtracted from the total lighting cost in the Tenant improvement pricing.**
- d. Typical Sidelight Assemblies – shall be constructed of 16 gauge, 2" hollow metal (HM) frame with welded corners and ¼" tempered glass. Typical sidelights should be approximately 1'-6"W x 7'-0"H and be integral with the door frame. If transoms and additional glazing adjacent to the door frame are to be specified by the Offeror's Architect in order to achieve LEED points for day-lighting, they shall also be integral with the 16 gauge HM door frame and approved by Chief, Project Management Branch, U. S. Citizenship and Immigration Services prior to being included in the project.
- e. Transient Voltage Surge Suppression (TVSS) - will be required and must be located prior to the building's main distribution panel. The Lessor shall be responsible for replacement of MX modules when a failure occurs and the system indicates the module is defective. U.S. Government IT (Information Technology) staff will periodically inspect LED indicator lights and contact GSA/Lessor when LED indicators show replacement is necessary. **The Lessor shall be responsible for providing, installing and maintaining this system throughout the entire term of the lease.**
- f. Intrusion Detection System (IDS) - required for afterhours monitoring of all exterior windows and doors that are accessible from the ground floor or adjacent roof areas and specific interior spaces as identified in this document. This may be accomplished by magnetic switches and dual technology ultrasonic sensors. The system shall include a minimum 90 minute battery backup and be designed to notify the **[USCIS Project Manager will insert appropriate FPS Megacenter in this block]**. The building lessor is responsible for providing two analog telephone lines (POTS). One is provided for the IDS reporting to the megacenter. One is provided for the environmental alarm system within the LAN room (See Section H in LAN Room paragraph). There shall also be an audible alarm located outside the building. All alarm lines shall be in conduit from the alarm box to the telephone junction box. The system shall be equipped with high security line protection and be zoned to provide continuous protection. Zoning of the system will be established by the Project Manager and the Office of Security and Integrity with the architect. The Lessor will be responsible for the maintenance of this system. The Lessor is also responsible for providing security that prevents unauthorized entry to the leased space during non-duty hours. The FPS MegaCenter shall be notified telephonically if the alarm system detects unauthorized entry. The system shall include all computer hardware, software and printers. The alarm shall remain active from 6:00 PM through 6:45 AM Monday through Friday and from 6:00 PM through 6:45 AM Friday through Monday unless modified by the local office. It also must have programmable hours to allow for changes to the time. It shall be active 24 hours a day on Federal holidays. The sensors will need to be zoned so that those offices requiring off duty hours of operation can be utilized individually while the other spaces are protected. The Federal Protective Service maintains a standard equipment list that must be adhered to, therefore the MegaCenter can only accept UL commercial panels by Honeywell (Ademco), Bosch (Radionics), Caddx, or DMP. Training will be provided to USCIS and contract guard staff prior to occupancy of the building to insure proper operational procedures are followed. **The cost of the Intrusion Detection System shall be paid for by the government through the tenant improvement allowance. The Lessor is responsible for all maintenance, service and repairs to ensure the Intrusion Detention System is in operational condition at all times throughout the term of the lease. The Lessor is also responsible for the cost of any monitoring service cost. Upon final cost reconciliation of the project, the cost of the IDS shall be provided to the Government for USCIS budgetary purposes.**
- g. Access Control System – Required on selected doors and shall be incorporated into the design intent drawings (DIDs). These doors will also be equipped with electric strikes, commercial grade door closers and mortised storeroom function door hardware. Interior proximity card readers shall be compact and low profile in design. Exterior proximity card readers shall be weather and vandal resistant. Doors equipped with this system shall be set to fail/secure. Provide a minimum of **[USCIS Project Manager will insert the appropriate number of required cards in this block]** programmable proximity cards. The system shall be located in the computer room and be equipped with a 90 minute battery backup. The system must be Homeland Security Presidential Directive 12 / HSPD-12 compliant. System controllers would be located in LAN Room. Computer, monitor, printer and ID management system will be located in Mission Support office unless stated otherwise in the design

process. Provide computer, monitor, printer and all necessary hardware and software for a complete installation. The location of the computer, monitor, printer and other associated hardware will be identified during the design process. Training will be provided to USCIS Staff prior to occupancy of the building. The cost of the proximity card reader system shall be paid by the government through the tenant improvement allowance. The lessor is responsible for all maintenance, service and repairs throughout the entire term of the lease to ensure the proximity card system is in operational condition at all times. Upon final cost reconciliation of the project, the cost of the proximity card access system shall be provided to the Government for USCIS budgetary purposes.

- h. **Video Surveillance** – required to provide coverage of the exterior of the building, secure parking areas, waiting room areas, and building entrances. Exterior cameras to be fixed Bosch LTC day/night or government approved equal and are to be building mounted wherever possible. The exact types, locations and quantity of cameras will be determined when the final design is completed and based on input from the Government and Lessor's security contractor/consultant. Video displays shall be a LCD Flat Panel Display (Bosch MON192CL10 or Government approved equal). Provide all necessary multi-plexers, controls (including an advance dome controller), switchers, printer, wiring etc. for a complete installation. A digital recorder capable of storing an entire month of video imaging must be provided. A DVD writer with a watermark must be provided that allows copies of selected video to be provided to law enforcement. The location of the video displays will be located at the guard station and the digital recorder, located in the LAN room, will be provided by the USCIS Project Manager during the design process. Training will be provided to USCIS and contract guard staff prior to occupancy of the building on the Video Surveillance system. The cost of the Video Surveillance System shall be paid by the government through the tenant improvement allowance. The Lessor is responsible for all maintenance, service and repairs throughout the lease term to ensure the Video Surveillance System is in operational condition at all times. Upon final cost reconciliation of the project, the cost of the video surveillance system shall be provided to the Government for USCIS budgetary purposes.
- i. **Metal Detector** – To be provided by the Federal Protective Service Blanket Purchase Agreement. Funding will be a separate Security Work Authorization.
- j. **X-RAY Machine** – To be provided by the Federal Protective Service Blanket Purchase Agreement. Funding will be a separate Security Work Authorization.
- k. **Cable Management / Data and Voice Cabling** – the Lessor shall be responsible for the installation of the data and voice cabling. A copy of the latest USCIS Structured Cabling Plant Standards is attached to these special requirements. A Scope of Work (SOW) specific for the cabling requirements for this installation will be provided during the design process. In general each drop shall consist of one voice drop and two data drops for each office, workstation or other location indicated during the design phase. The successful offeror will also be responsible for providing racks for phone and data punch downs as well as ladder type racks in the Computer Room as highlighted in the USCIS Structured Cabling Plant Standards. A combination of cable basket trays and J-hooks shall be used to distribute the data / voice cable throughout the building and shall be coordinated with the USCIS Project Manager during the 30% plan review. Cable trays (basket and ladder) shall be coordinated with mechanical ducts, sprinklers, plumbing, etc. to ensure a minimum of a 12" clearance above the tray from any obstructions. This work (materials and labor) shall have a warranty equal to the term of the lease. *Within 30 days of cabling plant completion, the contractor shall provide: Letter of Certification, Implementation Report, Detailed Materials List, Cable Plant Test Certification Letter, Copper Cable Test Results, Fiber-optic Cable Test Results, Cabling Warranty Documentation, and As-built Cable Plant Drawings. Please refer to section 2.1 of the USCIS Cable Plant SOW and section 15 of the USCIS Structured Cable Plant Standard for detailed descriptions of each deliverable.* The cost of this work shall be paid by the government through the tenant improvement allowance. Upon final cost reconciliation of the project, the cost of the data and voice cabling shall be provided to the Government for USCIS budgetary purposes.
- l. **Sound Transference** – It is the intent of USCIS to minimize the sound transference between indicated private offices identified in this document as requiring a STC rating of 44. USCIS realizes that the requested construction for these offices may not quite reach that STC rating what we are requiring for construction is walls that are constructed slab to deck with 5/8" Gypsum drywall and filled with batt insulation. The only room requiring additional construction effort to ensure a rating of STC 55 is the HSDN (TALON) Room.
- m. **Finishes** – all outside corners will be protected by a 4'0" corner guard.
- n. **Electrical Circuits** – Dedication/Isolated circuits will be required in copier areas, copier rooms and for the shredder in the FDNS Interview (TALON) room, and for the X-Ray machine, magnetometers and the vending machines in the break room. Dedicated outlets shall be a different color than the building standard.
- o. **Standard Duplex Electrical Outlet and Data Outlet Installations** – Duplex electrical outlets and data/phone outlets will be installed with the upper edge of the outlets no higher than 18 inches above finished floor (AFF) in all offices, conference rooms and open office areas.

2. Branding

U.S. Citizenship and Immigration Services is incorporating branding elements into the exterior and public spaces of all newly acquired space. Below are some design criteria that should be considered in developing the proposed design.

- a. Public Lobby with a ceiling height of 12'0" is desirable and should be considered when developing the layout.
- b. The profile of the statue of liberty (depicted to the right) should be provided within the lobby space where possible.
- c. The USCIS exterior sign standards must be incorporated into the proposal (see item 3).
- d. The successful offeror's architect must work with the USCIS Field Support Center on incorporating branding colors into all spaces.
- e. **Branding Paint Colors:**
USCIS has developed Color Schemes that will be incorporated into all projects. The successful offeror's architect will work with the USCIS Project Management Branch. Accent colors shall be used in the large public areas and in break rooms, conference rooms and open office areas.

3. EXTERIOR SIGN STANDARD

The exterior signage depicted must be provided on the exterior of the building space or in the entrance area to the USCIS space or as part of a monumental freestanding sign, retaining wall or other site feature. The proposed sign location should be indicated on the site plan or building elevation plans. (Dimensions utilized in the following layout are for scaling purposes only. If the offeror proposes a larger sign, all dimensions will be increased proportionally.)

4. SPECIAL HOURS OF OPERATION

The entire building is considered to be operational from 7:00AM to 6:00PM, 5 days per week (except for Federal Holidays). Other Areas such as the lobby, waiting room, ALL RESTROOMS (including the building shell restrooms) and the BREAK ROOM and COMMON CORRIDOR must be capable of having HVAC on Saturdays. These spaces (except for shell areas) are identified in the Specific Room Requirements. The HVAC should be zoned accordingly to avoid unoccupied areas from be heated or cooled. Additionally the LAN ROOM and any wire/telephone closets require 24/7 HVAC. USCIS recognizes that all utility costs in excess of 10 hours per day Monday through Friday will be paid for as overtime utilities through a Reimbursable Work Authorization.

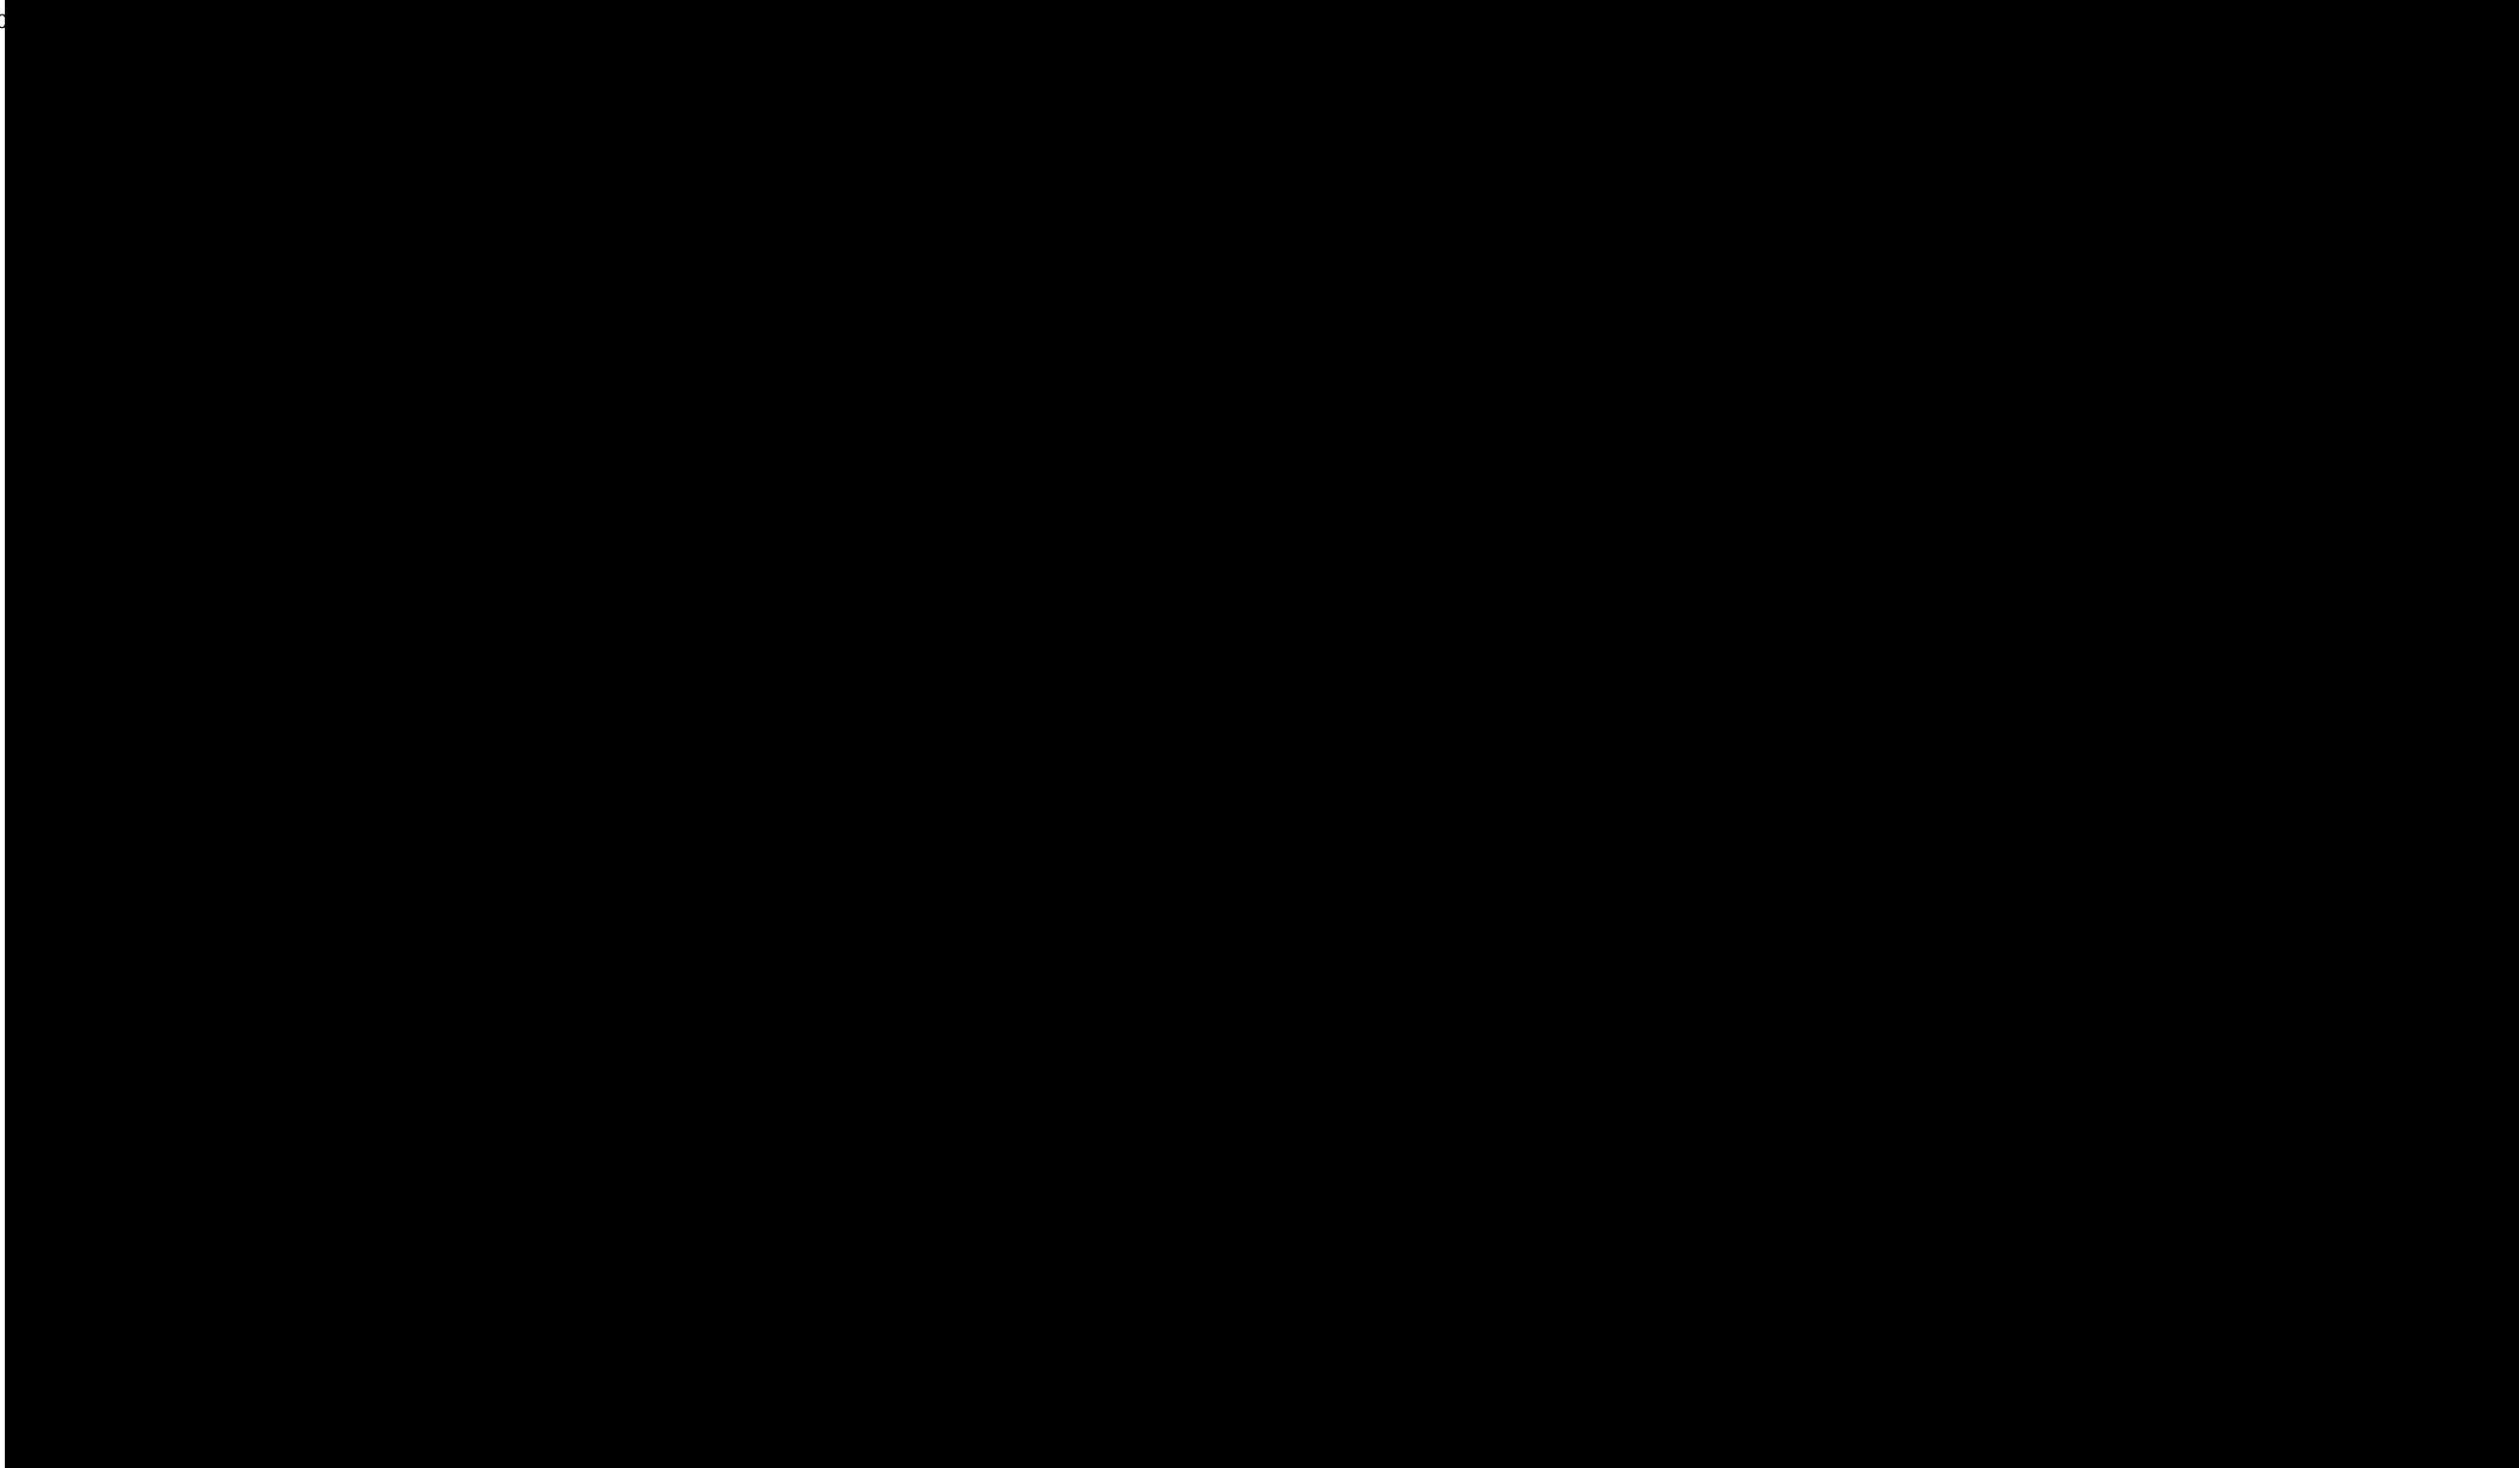

5. INTERIOR LAYOUTS

To assist in the design of the space, adjacency diagrams are included below to demonstrate the required adjacencies. While the building shape and number of floors may change, the adjacencies must be met. A test fit drawing with the necessary adjacencies must be provided based on the shell design being proposed by the Offeror. This plan is intended as a schematic design for adjacency purposes only.

Special Requirements Document Sheets

Specifications Key

FLOOR

CPT-1	Carpet tile with the following attributes, pattern loop, 100% type 6/6 nylon, 1/10 gauge, 8 stitches per inch, tuft density 6,000, 20 oz yarn weight.
VCT-1	Vinyl composition tile, marmoleum, or linoleum.
PT-1	Unglazed porcelain tile
FL-1	Factory sealed rubber flooring or industrial carpet.
FL-2	Commercial grade opaque sealer on concrete or equivalent. Floor structural capacity 100 LBS/SF live load min.
FL-3	Commercial grade recycled rubber flooring at least 4mm (such as Ecosurfaces or equivalent) or commercial grade linoleum flooring (such as Marmoleum or equivalent). Decorative pattern including two or more colors within the approved color palette.
FL-4	Terrazzo, terrazzo tile, or slip resistant porcelain floor tile. Life cycle cost shall be provided for any other proposed flooring products.
FL-5	Flooring same as adjoining rooms.

BASE

V-1	Provide 4" vinyl or rubber base.
PT-1	Porcelain tile matching cove
DM-1	Durable material that complements the wall and floor materials

WALLS

GWB-1	Gypsum wall board, constructed slab to slab, STC rating of 44, painted with low VOC water-based eggshell finish from slab to finished ceiling.
GWB-2	Gypsum wall board, constructed slab to finish ceiling, painted with low VOC water-based eggshell finish from slab to finished ceiling.
GWB-3	Gypsum wall board, constructed slab to 6" above finish ceiling, painted with low VOC water-based eggshell finish from slab to finished ceiling.
GWB-4	Moisture resistant gypsum wall board constructed slab to slab, STC rating of 44 painted with low VOC water-based eggshell finish slab to finished ceiling with wall tile wainscot to 5'-0" in drying area.
GWB-5	Gypsum wall board constructed slab to slab, STC rating of 55, consisting of 5/8" drywall + Green Glue @ 58 fluid ounces per 4' x 8' sheet + 5/8" drywall, metal studs, 24" on center, R13 fiberglass insulation, 5/8" drywall with 5/8" drywall + Green Glue @ 58 fluid ounces per, 4' x 8' sheet + 5/8" drywall, painted with low VOC water-based eggshell finish from slab to finished ceiling. Wrap sound putty behind wall box devices within the wall cavity to prevent sound penetration. Provide acoustical sealant at all joints (at the slab, deck and any ductwork).
GWB-6	Gypsum wall board constructed slab to slab, STC rating of 44, with sound control at any penetration in the wall, painted with low VOC water-based eggshell finish slab to finished ceiling; accent walls/wainscot at high traffic areas to compliment counters and provide durable, washable surface. Provide 4" vinyl or rubber base.
GWB-7	Gypsum wall board, constructed slab to slab, STC rating of 44. Finish shall be low maintenance material that will hold up over the term of the lease. Life cycle cost shall be provided for proposed products.
GWB-8	Gypsum wall board constructed slab to slab, STC rating of 44 painted with low VOC water-based eggshell finish slab to finished ceiling with wall tile wainscot to 5'-0"
GWB-9	Half height drywall partition walls with trim cap, 48" in height on sides, 84" wall at rear. Each station to be painted with an accent color on the inside.

DOOR

D-1	3'-0" x 7'-0" solid core hardwood veneer door with 2" HM frame with welded corners.
D-2	3'-0" x 7'-0" solid core hardwood veneer door with 2" HM frame with welded corners. Provide 1-6" sidelight adjacent to door (integrated with HM frame).
D-3	3'-0" x 7'-0" solid core hardwood veneer door with 24"W x 60"H tempered glass window and 2" HM frame with welded corners.
D-4	3'-0" x 7'-0" solid core hardwood veneer door with protective metal plates from height of door pull to 3" above bottom of door, full width of door.
D-5	3'-0" x 7'-0" opening and 2" HM frame with welded corners (no door).
D-6	3'-0" x 7'-0" (2) glass double doors
D-7	6'-0" x 7'-0" solid core hardwood veneer door with protective metal plates from height of door pull to 3" above bottom of door, full width of door.
D-8	4'-0" x 7'-0" with protective metal plates from height of door pull to 3" above bottom of door, full width of door. (Large offices may require 6'0" x 7'0" double doors).

HARDWARE

HDW-1	Passage Set (Refer to USCIS-4 for additional requirements)
	Commercial grade mortise passage set
	(3) Hinges
	(1) Wall stop or floor stop

HDW-1a	Passage Set (Refer to USCIS-4 for additional requirements)
	Commercial grade mortise passage set
	Door Closer
	(3) Hinges
	(1) Wall stop or floor stop

HDW-3	Office Set (Refer to USCIS-4 for additional requirements)
	Commercial grade mortise hardware (office function)
	(3) Hinges
	(1) Wall stop or floor stop

HDW-4	Secure Set (storeroom) (Refer to USCIS-4 for additional requirements)
	Commercial grade mortise hardware (storeroom function)
	Door Closer
	Electronic Swipe and Proximity Card Reader
	(3) Hinges
	(1) Wall stop or floor stop

HDW-5	Secure Set (passage) (Refer to USCIS-4 for additional requirements)
	Commercial grade mortise passage set
	Door Closer
	Electronic Swipe and Proximity Card Reader
	(3) Hinges
	(1) Wall stop or floor stop

HDW-6	Privacy Set (Refer to USCIS-4 for additional requirements)
	Commercial grade mortise hardware (privacy function)
	(3) Hinges
	(1) Wall stop or floor stop

HDW-6a	Privacy Set w/ closer (Refer to USCIS-4 for additional requirements)
	Commercial grade mortise hardware (privacy function)
	Door Closer
	(3) Hinges
	(1) Wall stop or floor stop

HDW-7	Glass Door Set
	Commercial grade bottom rail deadlocks
	Pivot hardware
	(3) Hinges
	(1) Wall stop or floor stop

HDW-8	Push / Pull set
	Push / Pull hardware
	Door Closer
	(3) Hinges
	(1) Wall stop or floor stop

HDW-9	Commercial grade mortise hardware (storeroom function), with door closer such as Pemko 412_PKM Automatic Door Bottom and 2" HM frame with welded corners. Door shall be equipped with an electronic strike that is released by a proximity card reader. Provide Standard Perimeter Gaskets at the door head and jambs. Gasketing to be Pemko 312CR or equal
-------	---

HDW-10	Secure Set (passage) (Refer to USCIS-4 for additional requirements)
	Commercial grade mortise passage set
	Door Closer
	Electronic Swipe and Proximity Card Reader
	Push to Enter (Auto Door Opener)
	Any hardware, hinges, screws, bolts, etc., accessible from outside must be peened, brazed, or spot welded to preclude removal.
	(3) Hinges
	(1) Wall stop or floor stop

CEILING LIGHTING

CEILING

CL-1	2 x 2 ACT with tegular edges with a mineral core with a NRC \geq .70 and CAC \geq 38 and a minimum 25% recycled content or Government approved equal.
CL-2	2 x 2 ACT with tegular edges with a mineral core with a NRC \geq .70 and CAC \geq 38 and a minimum 25% recycled content or Government approved equal. May be painted exposed deck (spiral duct is required if deck is exposed).
CL-3	2 x 2 ACT with tegular edges with a mineral core with a NRC \geq .70 and CAC \geq 38 and a minimum 25% recycled content or Government approved equal. Ceiling may incorporate painted GWB accents.
CL-4	Exposed painted deck
CL-5	Painted GWB ceiling
CL-6	Moisture resistant GWB. Painted with low VOC water-based eggshell finish
CL-7	2 x 2 ACT with tegular edges mineral core and a minimum 25% recycled content or Government approved equal.

LIGHTING

L-1	Direct / indirect lighting providing 30 foot candles at 30" AFF
L-2	Direct / indirect lighting providing 50 foot candles at 30" AFF
L-3	Moisture resistant direct / indirect lighting providing 30 foot candles at 30" AFF.

HVAC

HVAC-1	Independently zoned HVAC with thermostat. Provide air changes per ASHRAE standards.
HVAC-2	Independent HVAC zone with thermostat in this room capable of providing a recommended 0.2 tons of cooling.
HVAC-3	Independent HVAC zone on thermostat in this room, and provide means to ensure negative pressure for this room to avoid odors from escaping. Provide filters to remove odors from any air being mixed back into the building supply air, or exhaust directly to outside.
HVAC-4	Separate HVAC system that is totally isolated from the remainder of the building, with thermostat. This room should have negative pressure. Provide emergency shut off system.
HVAC-5	Ventilation shall be arranged to ensure that the air flows from the USCIS employee (ISA) side to the public side of the counter (i.e. negative air pressure in the waiting room) to reduce the risk of airborne pathogens infecting USCIS Information Officers.
HVAC-6	Provide exhaust fan.
HVAC-7	Meet current applicable ASHRAE air quality & energy requirements; Provide exhaust fan
HVAC-8	Size to accommodate heat generation of equipment and people (number TBD at lease award)
HVAC-9	Building standard HVAC required.
HVAC-10	Provide air changes per ASHRAE standards.

PLUMBING

PL-1	Full height fiberglass shower enclosures with associated mixing valves equipped with anti-scalding devices and shower heads
PL-2	Single basin SS sink at counter
PL-3	Provide an electric water cooler (this is in addition to the electric water cooler indicated in the Solicitation for Offers)
PL-4	Double basin SS sinks at counter
PL-5	All fixtures (lavatories, toilets and urinals) shall be operable by motion sensor. Hot water temperature should be set at 105 degrees if practical. Provide floor drain.
PL-6	Eyewash and handwash station with drain
PL-7	Separate Pre-Action fire sprinkler and alarm system.

EQUIPMENT

TF-1	Toilet fixtures with ceiling partitions and doors. Each stall must include a coat hook on the inside face of the door, disposable toilet seat cover dispenser and toilet paper dispenser. *** (*) urinals with ceiling/wall suspended privacy partitions. Water closets shall not be visible when the exterior door is open. Provide grab bars, etc. in handicapped accessible stall. Approximately **** (**) linear feet of solid surface counter with *** (*) lavatories, soap dispensers and mirrors. Provide energy efficient electric hand dryers.
TF-2	Toilet fixtures with ceiling partitions and doors. Each stall must include a coat hook on the inside face of the door, disposable toilet seat cover dispenser and toilet paper dispenser. Water closets shall not be visible when the exterior door is open. Provide grab bars, etc. in handicapped accessible stall. Approximately *** (**) linear feet of solid surface counter with *** (*) lavatories, soap dispensers and mirrors. Provide energy efficient electric hand dryers.
TF-3	One toilet fixture and sink. Include a coat hook on the inside face of the door, disposable toilet seat cover dispenser and toilet paper dispenser. Water closets shall not be visible when the exterior door is open. Provide grab bars, etc. in handicapped accessible stall. Approximately *** (**) linear feet of solid surface counter with *** (*) lavatories, soap dispensers and mirror. . Provide energy efficient electric hand dryers.
EQ-1	Provide *** (*) Energy Star rated refrigerators (21 CF each without ice or water with overhead freezer) and *** (*) built in microwaves ovens. There will be one appliance for every forty staff employee. The cost of the appliances shall be paid by the government through one-time costs. The Lessor is responsible for all maintenance, service and repairs throughout the term of the lease to ensure the appliances are in operational condition at all times.
EQ-2	Include an electronically operable (by wall switch) 8'W x 8'H projection screen recessed in the ceiling. Provide a ceiling mounted video projection bracket in the ceiling. Provide wall bracing, brackets, electrical and conduit with wall box and pull string for Government provided LCD television/monitor. Assume that television weighs approximately 100 lbs (to include mounting bracket).
EQ-3	InfoPASS Kiosk – Two InfoPASS (USCIS appointment scheduling) kiosks (provided by the Government) shall be located before the security screening checkpoint. This will require an electrical receptacle and a data jack for each machine.
EQ-4	GSA Class 5 or 6 Safe 20" x28" (2 drawer safe), NSA Approved Shredder 20" x 20"
EQ-5	Copier Machine
EQ-6	Under counter refrigerator.

REFERENCED STANDARDS

USCIS-1	Refer to latest Computer & Telephone Room Standards for requirement
USCIS-2	Refer to latest USCIS Audio Visual Standards document for requirement.
USCIS-3	Refer to the latest USCIS Structured Cable Plant Standards document for requirement.
USCIS-4	Refer to the latest USCIS Facility Security Construction Standards document for requirement.

Good morning Ms. Barrett,

Here is the information you requested:

The Peachtree Summit Federal Building is 31 story facility located in downtown Atlanta, Georgia. The is building 867,000 sq ft. We have identified floors 23, 24, 25, and 26 as having vacant space and available for occupancy. Floors 23 and 25 are partially vacant and floors 24 and 26 are entirely vacant.

Here is the total square-footage available on each floor that has vacant space.

FI 23 - 9,506 usf
FI 24 - 25,702 usf
FI 25 - 20,741 usf
FI 26 - 26,039 usf

Please let me know if you have additional questions.

Respectfully,

Jimmie L. Kerns

Hi Jimmie

I got your message, thank you for reaching out. Before we set up the site visit, can you forward information on the space that is available? All I know is that there is 136,119 usf available but I don't know how much of that space is contiguous, what floors the space is on, etc.

Thank you,

Gina Barrett

Gina,

Our team can coordinate the site visit Wednesday (17th) or Thursday (18th) in the afternoon. Please let us know which you would prefer, Tuesday is not a possibility for our local team. Sorry for any inconveniences.

Attached is the floor plan that we have for the facility, we can print out a hard copy for the walk if you would like. Please let me know what your team decides.

Thank You,

On Fri, Sep 5, 2014 at 2:55 PM, Barrett, Gina V <Gina.V.Barrett@uscis.dhs.gov> wrote:

Hi Mike

You've been identified as the POC for space that we understand will be available in January 2015 at 1900 River Road, Burlington, NJ. We are visiting a few sites that GSA has identified as vacant or will be vacant. Can we coordinate a date and time that we could meet you at the site possibly the week of September 15th? We would most likely drive up from Washington, DC. I understand the space is over 1,000,000 square feet of which most is warehouse space. I don't have very specific requirements defined as of yet but we're gathering information on space already in GSA's inventory. Below is the information I've been given on the Burlington, NJ site:

1900 River Road

Burlington, NJ – to be visited

Total Vacant Rentable Square Feet: 1,048,000

Total Vacant Office Space: 40,000 rsf

Total Vacant Warehouse Space: 1,008,000 rsf

1900 RIVER ROAD BURLINGTON, NJ

1900 RIVER ROAD BURLINGTON, NJ

Building Information:

Year Built: The River Road GSA Northeast Distribution Center was built in 1990.

Building Amenities: The building has a lunch room, locker rooms, and vending machines.

Nearest Metro: The building has no metro access

Adjacent to: River Road has restaurants and small strip malls located within 5 miles of the location.

Lease Expiration Date: This is a GSA-leased building with the lease expiring in December of 2020. The facility was constructed over 20 years ago for the Federal Acquisition Service/Northeast Distribution Center. The operation stored and distributed GSA Global Supplies to federal government offices and military installations. The distribution center will vacant by January 2015.

Parking spaces: 300 parking spots with expansion options

Description of the space: The building is a single level warehouse with approximately 4 locations that have been built out to provide a second level for conference space or additional office space. The building also has approximately 40,000 rentable square feet of office space that was constructed 20 years ago. The ceiling height in the warehouse space is 35' high. There is no air in the warehouse space but does have heat. The 40,000 rsf of office is fully conditioned (air and heat).

The operation stopped receiving supplies in August 2014 and will stop all shipping in October 2014.

The office space is still occupied by a few staff but will be completely vacant by January 2015.

Total rentable square foot: The building has approximately 1,048,000 rentable square feet available that can be subdivided into a minimum of 200,000 rentable square feet areas according to the GSA representative.

Passenger elevators and freight: There are no elevators at the site

Loading Dock: The building has multiple loading dock bays (appr. 50) that wrap the building on all 4 sides to include a rail loading dock for accepting deliveries via railroad cars.

Previous occupant of the space: The General Services Administration/Federal Acquisition Service was the previous occupant of the building.

1900 RIVER ROAD BURLINGTON, NJ

This space will require a complete build out/renovation including the following:

Demolition

1. Demolition of existing storage racks and sprinkler piping that has been integrated into the racks.
2. Demolition of a conveyer belt floor mounted track system that wraps the entire warehouse.
3. Depending on location chosen the possibility of demolishing the conveyer system.
4. Demolition of bay doors located within the area accepted.

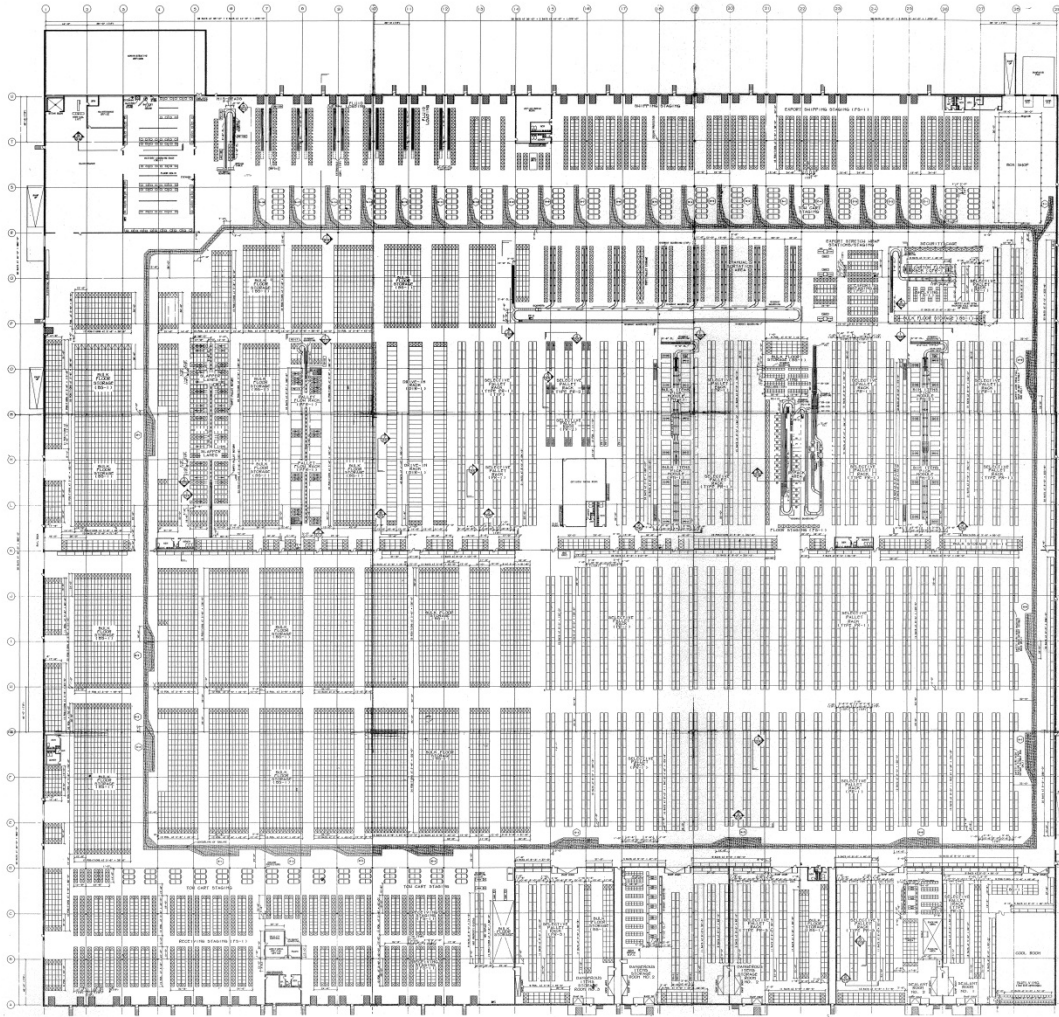

Construction

1. Insulate the existing perimeter walls
2. Replace fire stop sealant on existing columns and wrap columns in drywall partitioning.
3. Furnish and install a true ceiling by constructing a mezzanine level above the office space to be able to support the HVAC system, HVAC ducting, sprinkler system.
4. Install HVAC system in the current warehouse space
5. Install a new drop ceiling to include the required supply/return diffusers, overhead lighting, fire alarm equipment, and sprinkler system.
6. Design and build office space to include private offices, workstations, conference rooms, computer room.
7. Extend power and run new electrical within the required design
8. Extend phone service to provide connectivity for occupants.
9. Install floor covering throughout area

Notes: The space is a warehouse and will require major construction prior to occupancy. The cost of the required construction will be expensive and it will take approximately a year to complete from design to occupancy.

Hi. Just a follow up and some updates and follow up actions after the 2nd tour of vacant space at CP4 last week.

The space currently has 10 parking spaces available to date (another agency has signed an OA to secure 6 parking spaces at the location)

I've attached the floor plans the lessor provided for the 1st floor since the information provided back in August did not include a complete set for floor 1 (PBS does not have linear footage available just RSF included in the lease - the lessor did not have the information available)

Below, please find the IT updates from the PM that worked on the Infrastructure project that was done around 7 years ago for your IT Team. I hope the information is helpful.

- 1) The building is completely wired with Cat 6
- 2) The previous tenants did not want WIFI because at the time there was no division between a secured or unsecured network for the building so there does not appear to be any WiFi wiring in the building (the wall materials is unknown for wifi accessibility but a cor3e drill or wiring through the floor can be done if needed) ...
- 3)Over 300+ wiring sets were pulled from the terminals in the basement to afford a pbx or centrex system that could be stationed on each floor; however, no centrex terminals were installed at the time of the initial build out 7 years ago

Thank you. Have a nice afternoon.

On Fri, Oct 17, 2014 at 5:49 PM, Tanya Minor - BPAA <tanya.minor@gsa.gov> wrote:

It was a pleasure seeing the CIS team again at the tour this morning (and meeting the OIT representative and senior leaders). I'm out of the office Monday but I have listed and requested the following items to send to the CIS Facilities/IT team (wifi accessibility in the building (if there is no wifi hook up, are the walls drywall or concrete for wiring, centrex availability, if there are additional floor plans availability (1st floor plans sent appear to be incomplete), check with the lessor's office to see if linear footage is availability (since the lease is based on RSF)

Thanks, Tanya Minor

On Wed, Oct 15, 2014 at 12:56 PM, Tanya Minor - BPAA <tanya.minor@gsa.gov> wrote:

Subject: Follow up: 2200 Crystal Drive

Hi Gina -

You're welcome. It was nice meeting you and your team yesterday during the tour. Below, please find the square footage data by floor for 2200 Crystal Drive (CP4). Attached, are floor plans, pictures of the space (I have a total of 65 if you need additional) and a draft Pro Forma OA (with the rates) to aid in your internal discussions on space requirements for DHS/CIS at this location.

Floor (s)	BOMA Rentable Area
G-1	4,719
First	32,547
Second	21,030
Third	25,955
Fourth- Eleventh	24,461 (each floor)
Totals	279,939

Note: approximate and used for discussion purposes

The current lease expires 2/11/16 with no renewal options. GSA/PBS cannot extend this lease because it would require prospectus authority. Just a reminder, another federal agency, USAID, has an OA for part of the space in CP4. While they have informed PBS their requirement has

changed and that they will release most of their space and only retain a small portion in the building of approximately 100 RSF (a portion of the lan room located on the first floor), the availability of the space is subject to USAID's release of it under the terms of their OA. PBS will work with USAID on their release of space if DHS CIS wants to move forward with a back fill.

Please let David McPherson or I know if you need additional information on space requirements for your agency.

Thank you and have a nice weekend.

Subject: Tour of Metro West

Mr. Jones -

Good Morning, I understand you would will be visiting the Metro West Facility at 300 N Greene Street in Baltimore tomorrow morning at 10am. I am the Operations Manager for the Baltimore Field Office and will be meeting you at the building to provide the tour. The only way to access the facility is through the garage so I have provided directions below. Parking will be provided on-site. I will be meeting you at the entrance of the garage by the guard station.

If you have any questions or concerns prior to meeting, please feel free to reach out to me by email or phone (cell # [410-984-4574](tel:410-984-4574)).

I look forward to meeting you.

Directions from 95 N/S

- Use Exit for 395 to enter into downtown Baltimore.
- STRAIGHT passed Camden Yards and across Pratt Street
- LEFT onto Lombard Street
- RIGHT at 2nd light onto Paca Street
- LEFT onto Saratoga (4th or 5th light - just passed Lexington Market)
- STRAIGHT through the light at Greene Street
- The Garage is on your RIGHT hand side about 100 yards passed Greene Street. The overhead door may be closed. Simply pull up to the door and the guard on duty will open the door.

Claire Bonner

Date: Wednesday, August 27, 2014 4:09:00 PM
Importance: High

Thanks for the info Mel. The information we received from Central Office and the floor plans you provided shows 150,817 usf available. The details provided below totals 120,000 sf of which 22,000 sf is warehouse space. Are the floor plans provided accurate? I assume the warehouse space is on the 1st floor??? What are the structural issues with the space? Can the space be occupied in the current state? How soon could we visit the space?

I may come from DC but couldn't get there until probably next Thursday.

Thank you,

Gina Barrett

Hi Gina,

Glad to hear CIS is considering our Federal Center South Property. Our team looks forward to being able to take you through the space.

Attached you'll find drawings for the building so that you may orient yourself with the space. I've pasted some information from our Asset Manager Keith Beck that I understand he shared with John Walsh of your office.

[They discussed the Federal Center South Facility and various amenities, parking, daycare, cafeteria, and fitness center.](#)

[They shared the current availability of office \(98,000 sq ft\) and warehouse \(22,000 sq ft\) as well as the current structural, historical and financial limitations of the 1201 building. The current situation is that we are only signing shorter term OAs \(3 years\) and that we are trying to backfill the space with minimal tenant improvements pending a hopeful prospectus project that would redevelop the 1201 into class 'A' useable office space somewhere in the 2018 timeframe.](#)

[They discussed a potential phased occupancy \(40K sq ft at first and growing as they added staffing needs\) and the possibility with that, to potentially phase the construction project if money were to come available.](#)

The chicken and egg situation was explained, we are unable to receive funding without a need and we are not able to find someone willing to occupy the space without the funding needed for build out and structural upgrades.

John mentioned the need for up to 100K of sq ft (not all immediately) for a fifth regional service center for USCIS (besides Maine, Florida, Texas and California). The facility is back office function of CIS, (that is, no people detention, hoteling etc.) and that the need is developing. 16 months is probably the desired date at present. Includes a requirement for heavy file storage.

Look forward to hearing from you soon.

Best Regards,

Mel

Hi Mel

You've been identified as the POC for space that we understand is available in Seattle, WA (4735 E. Marginal Way). Before we make arrangements to visit the space can you get me specifics of the space? All I know is that there is 147,985 usf available. It would be great to have more details about the space. Information like which floors is the space on, what is the square footage by floor, is the space contiguous, and anything else you can get us. Floor plans would be great as well. If the space is something that we believe will work for us, I would like to set up a site visit pretty quickly.

Thank you,

Gina Barrett

Gina,

Region 10 has identified the Regional Account Manager Mel Hager as the point of contact to arrange a site visit for USCIS to Federal Center South in Seattle, WA.

Mel's contact information is:

Melissa (Mel) Hager, Regional Account Manager
Melissa.Hager@gsa.gov
[\(253\) 931-7270](tel:(253)931-7270)

Regards,

Herman

Washington, DC 20405

[240-893-3678](tel:240-893-3678)

FEDERAL CENTER SOUTH, SEATTLE WASHINGTON

Building Information:

Year Built: The Federal Center South building 1201 was built in 1932 and has historical status

Building Amenities:

- Secured storage
- High bay warehouse on south end
- Full service cafeteria
- Onsite daycare facility
- Fitness Center including basketball court
- Adjacent to Duwamish Water Way

Nearest Metro: The building has access to metro bus. The train and ferry stations are within 5 miles of the building location.

Adjacent to: Federal Center South has local restaurants and is located within close proximity to downtown Seattle which is full of shopping and restaurants.

The building is GSA owned and the below tenants occupy space on the campus.

- Department of Defense (Army Corps of Engineers)
- Veterans Administration
- General Services Administration

FEDERAL CENTER SOUTH, SEATTLE WASHINGTON

- Bureau of Indian Affairs
- US Department of Agriculture

Parking spaces: The campus has 600 parking spaces. Parking is allocated on a pro rata share based on the amount of square footage occupied by each agency.

Floors –vacant: The building is two levels. The second floor is completely vacant with approximately 98,000 rentable square feet and approximately 53,000 rentable square feet of warehouse storage space on the first level.

The rental rate is between \$11.00 to \$12.50 a square foot.

There are two large freight elevators located on the north and south sides of the building and open to the warehouse/storage space.

The building has a drive through loading dock with a height limitation of 11' it also has a high bay warehouse for trucks larger than the 11'.

This space will require minor build out with the following tasks required.

Demolition

1. Demolition of existing carpet
2. Demolition of existing furniture base feeds
3. Demolition of existing 1'x4' overhead lighting
4. Demolition of existing floor mounted power and data boxes
5. Demolition of existing ceiling tiles and grid system

Construction

1. Installation of new carpet
2. Installation of new overhead lighting and ceiling tile and grid system
3. Installation of new furniture base feed and floor mounted data boxes to make the flush mounted
4. Installation of security system
5. Installation of new systems furniture and case good office furniture
6. Design and build computer room to include supplemental cooling

Notes:

The space needs minimum work for occupancy and has a walker duct floor system which is good for electric and data runs to workstation clusters. The building was originally built as an auto plant for Ford and has 2 large freight elevators and approximately 12" concrete floor slabs which should allow USCIS to install a file room without needing to reinforce the floor. GSA is sending floor load capacity in the office space section of the available space. The warehouse storage area will require us to build a partitioned area with supplemental air for file storage. The warehouse currently has the leased areas

FEDERAL CENTER SOUTH, SEATTLE WASHINGTON

separated by chain link fence with barbwire. There is also an existing open storage (secret level) already constructed on the 2nd floor that could be used for HDSN.

Pictures are included.

Description

Legalization/SAW Temporary Resident
Asylee/Refugee
Paroled as a Refugee
Asylee (Granted Asylum)
K-1 Nonimmigrant Fiance
N-8 or N-9 Nonimmigrant
Citizen of Micronesia
K-3 Nonimmigrant Spouse
Granted Withholding of Deportation or Removal
Deferred Enforced Departure
TPS Granted
Family Unity Program
LIFE Family Unity
V-1, V-2, or V-3 Nonimmigrant
T-1 Nonimmigrant
Spouse of an E-1/E-2
Spouse of an L-1
U-1 Nonimmigrant
U-2, U-3, U-4, or U-5
Dependent of A-1 or A-2
Granted Voluntary Departure
Dependent of TECRO E-1 Nonimmigrant
Student OPT
F-1 Practical Training
F-1 Student - Off-campus employment Under International Org.
F-1 Student - Off-campus employment due to extreme economic hardship
F-1 Student Relief
F-1 Student - Pre-Completion OPT
F-1 Student - Post-Completion OPT
F-1 Student - 17-month extension for STEM students
Dependent of G-1, G-3 or G-4 Nonimmigrant
J-2 Spouse or Minor Child
M-1 Practical Training
Dependent of NATO-1 through NATO-6
Asylum Applicant
Adjustment Applicant
Adjustment of Status
Adjustment of Status
NACARA
Application for Suspension of Deportation
Paroled in the Public Interest
Spouse of an E-2
E-2 CNMI Investor
In Proceedings
Deferred Action
Adjustment Applicant Based on Continuous Residence since 01/01/1972

B-1 Nonimmigrant Who is the Personal or Domestic Servant of a Nonimmigrant Employer
B-1 Nonimmigrant Domestic Servant of a US Citizen
B-1 Nonimmigrant Employed by a Foreign Airline
Final order of Deportation
TPS Pending
Pending SAW Application
Non Immigrant S VISA
Pending legalization application
LIFE Legalization Applicant
T-2, T-3, or T-4 Nonimmigrant
VAWA Self-Petitioner
VAWA Self-Petitioners
DACA

Please note

- 1) The report reflects the most up-to-date data available at the time the report is generated.
- 2) Duplicates have been removed
- 3) Part_2_1 reflects the reason for filing. A= Initial Employment, B = Replacement, C= Renewal employment, Blank or any other code means that the reason for filing is not indicated.

Data generated February 6, 2015

Report created February 6, 2015

System CIS Consolidated Operational Repository (CSICOR)

Office of Performance and Quality, Performance Analysis and External Reporting (PAER) NP

Parameters:

Form type: I765

Data type: Approvals, Denials, Pending by Class Preference and reason for filing

Date Range: October 1, 2013 to Septemeber 30, 2014
